

# Absorbeur d'humidité au gel de silice

## CARACTÉRISTIQUES:

Le Gel de silice est un matériau de sorption de haute-activité, issue de la réaction chimique du silicate de sodium et d'acide sulfurique, du vieillissement et du processus de baignade aigre. Le gel de silice est une substance amorphe. Sa formule moléculaire est mSiO<sub>2</sub>.nH<sub>2</sub>O.

Il dispose d'une propriété chimique stable et ne réagit jamais avec une substance à l'exception d'alcalin forte et d'acide fluorhydrique. La composition chimique et la structure physique du gel de silice en fait un matériau idéal et exclusif pour un sachet absorbeur d'humidité: Une haute performance de sorption, une grande stabilité thermique, une grande robustesse mécanique, non toxique, insipide et sans risque de contamination.
