

TMS320C5515 Fingerprint Development Kit (FDK)

Comprehensive development tool for only U.S. \$79

There is an increasing need for better forms of security. Therefore, biometrics, the use of a person's unique biological characteristics (such as face, voice, or fingerprints) for personal identification, is a fast growing market.

TI's TMS320C5515 Fingerprint Development Kit is a complete signal chain solution to help manufacturers and developers add fingerprint authentication features into their products faster. A programmable processor like the C5515 digital signal processor (DSP) provides maximum processing flexibility to a biometric system and allows the product to be small and portable while maintaining power-efficient performance – at a low system cost. For users who have no experience in developing fingerprint applications, this kit can potentially reduce their time to market by 9 to 12 months. Target markets include fingerprint-enabled physical access control products (electronic door locks and safe boxes), USB smart keys and storage device, PC user identification and time and attendance monitoring systems.

▲ C5515 DSP-based core board and extension board

TMS320C5515 Fingerprint Development Kit features

This robust development kit includes a core board based on TI's C5515 DSP, two widely used fingerprint sensor types (swipe and optical), as well as optimized application software to ease product creation and implementation.

The comprehensive C5515 Fingerprint Development Kit includes:

- C5515 DSP-based core board
- Extension board for power supply, communication to PC and user interaction
- Toon optical sensor
- AuthenTec swipe sensor
- A-to-mini-B USB cable for power supply and communication to PC
- Mini converter board for JTAG emulation
- Mini DVD contains:
 - Code Composer Studio™ IDE Rev. 3.3
 - Simplified fingerprint application source code and software documentation
 - Production-quality demo code .out file
 - C5515 datasheet and CSL
 - Technical documentation including quick start guide, user guide, application notes, schematics, BOM and gerber files

Why the TMS320C5515 DSP?

Fingerprint biometrics is an area rich with opportunities for DSP-based innovation. The signal-processing elements in fingerprint

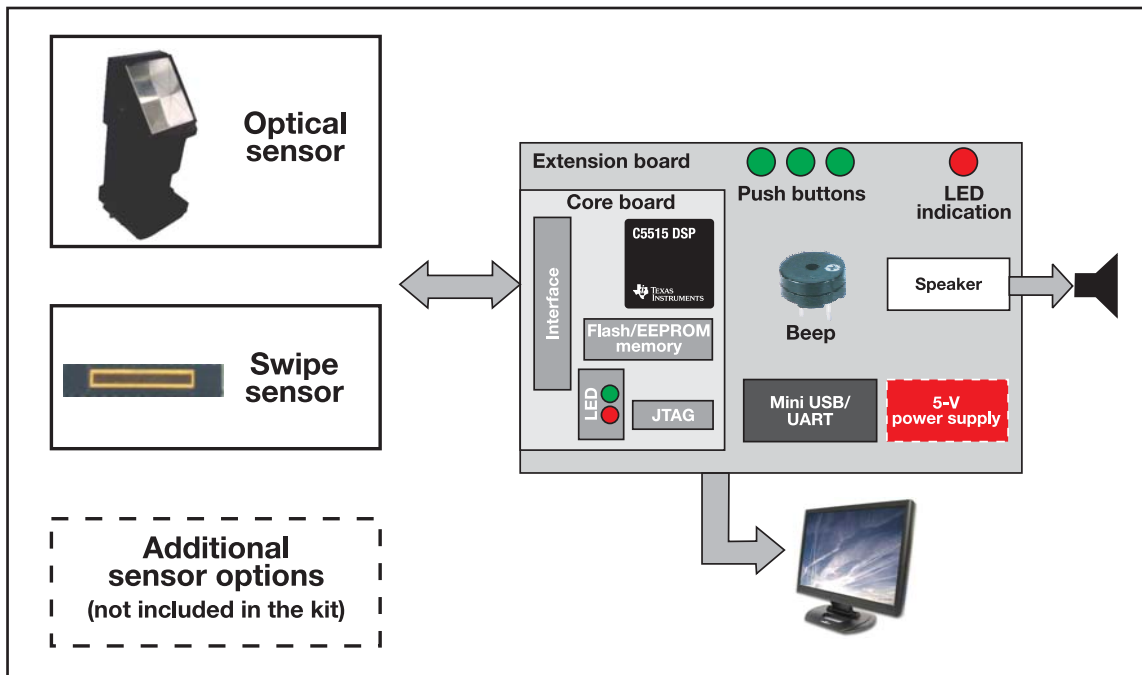

Key benefits

- Based on industry's lowest power 16-bit TMS320C5515 DSP for longer battery life
- Comprehensive, low cost (U.S. \$79) development tool that greatly reduces product design cycle
- Optimized DSP code for fast and accurate fingerprint matching
- Very small form factor (the core board is only 30mm × 30mm, the extension board is 70mm × 30mm) meets portable application requirements
- Two-board architecture provides great design flexibility, allowing customers to reuse their designs to develop scalable product lines

algorithms are classic DSP functions such as filtering, transforming and sorting operations. The FDK is based on TI's latest C5515 digital signal processor, which is the industry's lowest power, 16-bit fixed point DSP and helps conserve energy at an exceptional level and enables longer battery life.

TMS320C5515 DSP features and benefits:

- TMS320C55x™ architecture achieves code execution efficiency and reduces power consumption through three main areas:
 - Increased parallelism from the dual multiply-accumulate (MAC) units

▲ TMS320C5515 Fingerprint Development Kit system overview

- Higher data bandwidth to on-chip memory through the multiple simultaneous accesses
- Advanced DSP addressing features
- With extensive power management features such as memory retention, real-time clock (RTC)-only mode and clock gating to maximize battery life for portable devices
- Highly-integrated peripherals – including a high-speed USB 2.0, three on-chip low-dropout regulators (LDO), UART, SPI and GPIOs – as well as up to 320KB of on-chip memory saves system costs and power enabling new emerging applications.

Get started today

The C5515 Fingerprint Development Kit is available today for only U.S. \$79 from TI and TI authorized dealers. The orderable part number is TMDXBDFP5515. For more details, go to our website at www.ti.com/c5515fdk

Important Notice: The products and services of Texas Instruments Incorporated and its subsidiaries described herein are sold subject to TI's standard terms and conditions of sale. Customers are advised to obtain the most current and complete information about TI products and services before placing orders. TI assumes no liability for applications assistance, customer's applications or product designs, software performance, or infringement of patents. The publication of information regarding any other company's products or services does not constitute TI's approval, warranty or endorsement thereof.

The platform bar, Code Composer Studio and TMS320C55x are trademarks of Texas Instruments.

All other trademarks are the property of their respective owners.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
