Key Features & Specifications

- Short: #24 AWG plated copper wire
- Terminals: low-thermal copper alloys
- Termination: five shrouded banana plugs
- Quantity: 2

Description

The Agilent 34172B digital multimeter calibration short is a set of two shorts which provide a convenient and reliable method to apply a short to the input connectors of the multimeter. Terminals are made of low-thermal copper alloys to minimize thermally-induced voltages caused by dissimilar metals.

The Agilent 34172A is compatible with the Agilent 34401A, 34410A, 34411A, and L4411A digital multimeters.
