# Kaspersky Internet Security 2013

Internet security – keeping you safe from all threats

Your PC... the photos, music, documents and personal information you store on it, plus the places your PC can take you on the Internet... are precious. While no one wants to spend endless hours configuring and constantly maintaining a PC security solution, you need to know that you're safe from the increasingly complex threats that the Internet can throw your way. So it's vital that you have a security solution that rigorously protects your files and your identity from cyber criminals and the latest malware attacks.

Benefits

Protects against all viruses and Internet threats

By combining cloud-based functionality and powerful security technologies that run on your PC, Kaspersky Internet Security 2013 delivers more effective defences against today's increasingly complex threats – so you're able to enjoy the Internet, while Kaspersky protects you, your PC and your children.

In addition to including all of the features offered by Kaspersky Anti-Virus 2013, Kaspersky Internet Security 2013 delivers many innovative, new technologies that are essential to defending you against sophisticated threats on the Internet. With Safe Money, Secure Keyboard and other unique features, Kaspersky Internet Security 2013 does more to help ensure you can get the best out of the Internet... without compromising your safety.

Detects new, emerging and unknown threats

The cloud-based Kaspersky Security Network gathers data from millions of participating users' systems around the world... to help defend you from the very latest viruses and malware attacks. Potential threats are monitored and analysed – in real-time – and dangerous actions are completely blocked before they can cause any harm.

Identifies suspicious websites and phishing websites

Advanced anti-phishing technologies proactively detect fraudulent URLs and use real-time information from the cloud, to help ensure you're not tricked into disclosing your valuable data to phishing websites. Our URL Advisor also adds colour-coded tags to all web links – to advise you of the danger level of the link and subsequent pages.

Delivers greater security for online shopping and banking

Kaspersky Internet Security has always included additional layers of security that help to keep your information safe during online transactions. Now, with the introduction of our unique Safe Money technology, you benefit from even greater protection. Safe Money automatically checks that the website you're visiting is secure – and it also offers to open the website in a special, protected mode... to help keep your credit card number and other personal data safe from cyber thieves.

Protects your privacy and your digital identity

Kaspersky Internet Security 2013 provides a wide range of technologies to protect your privacy and your identity – including two unique security features for entering personal information online:

- Secure Keyboard is a new Kaspersky technology that automatically activates whenever you open a bank website or payment website – or you enter a password within any web page – to ensure that information you enter using your physical keyboard can't be accessed by keyloggers
- For our ultimate protection, Kaspersky's improved Virtual Keyboard feature allows you to use mouse-clicks to enter your banking information – so that keystrokes can't be tracked or stolen by keyloggers, hackers or identity thieves

Keeps your children safe and responsible

Award-winning family protection features help you to keep your children safe and also give you greater control over your children's access to the PC, the Internet, applications, games and websites. You can block, limit or log your children's Instant Messaging and social network communications – and block the transfer of private data, such as phone or credit card numbers.

Prevents malware from exploiting vulnerabilities in your PC

If your PC has application or system vulnerabilities that haven't been updated with the latest fixes, cyber criminals and malware could gain entry. In addition to scanning for vulnerabilities, Kaspersky Internet Security 2013 analyses and controls the actions of programs that have vulnerabilities – so they can't cause any harm.

Automatic download and installation features – save you time and effort

Installation now requires far fewer manual steps. When you first download the product from our website, it automatically checks for the latest product version – disinfects existing malware, if necessary – and then starts the installation.

Compatible with Windows 8

Kaspersky Internet Security 2013 is fully compatible with Microsoft's latest operating system – Windows 8 – and is integrated with Microsoft's latest IT security innovations. In addition, Kaspersky Now – a new application that has been developed to support Microsoft's new user interface – lets you monitor your PC's security status and launch vital security features.

Key Features

Safe Money adds even stronger security for online banking and shopping New!
Kaspersky Internet Security has always provided protection for online transactions... and, in the latest version, whenever you attempt to log on to an online bank, a payment system website or an e-commerce site, our unique, new Safe Money feature will:

- Compare the website's URL with a database of secure sites
- Check the certificate used to set up the secure connection – to avoid any behind-the-scenes transition from your intended site to a 'fake' site
- Check your system for online banking vulnerabilities related to your PC's operating system
- Automatically suggest opening the site in the Safe Money mode – for added security against the theft of personal and financial data

... so Kaspersky's advanced technologies are always protecting you when you're online – shopping, banking and more.

Secure Keyboard protects the personal data you enter via your keyboard New!
Because keyloggers can record the keystrokes you use to enter your credit card number or other valuable information via your keyboard, Kaspersky Internet Security 2013 includes our new Secure Keyboard technology. When you open a bank or payment website – or enter a password within any web page – Secure Keyboard automatically opens... to keep your data safe from keyloggers.

System Watcher
Even if an unknown piece of malware manages to get onto your PC, Kaspersky's unique System Watcher will detect dangerous behaviour and allow you to undo or rollback most malicious actions.

Parental Control Improved!
A new Parental Control engine includes new and improved protection for children that use your PC. Kaspersky Internet Security 2013 allows more effective control over children's use of both the PC and the Internet – and provides more reliable filtering of websites that contain inappropriate content.

New anti-spam module Improved!
Kaspersky Internet Security 2013 includes a new, improved anti-spam module that provides more reliable filtering of unwanted messages and also includes enhanced reporting about detected spam.

Better anti-phishing protection Improved!
A new anti-phishing engine improves your defences against Internet fraudsters' attempts to gain access to your personal information.

Automatic Exploit Prevention New!
Even if your PC and the applications running on it haven't been updated with the latest fixes, Kaspersky Internet Security 2013 can prevent exploitation of vulnerabilities by:

- controlling the launch of executable files from applications with vulnerabilities
- analysing the behaviour of executable files for any similarities with malicious programs
- restricting the actions allowed by applications with vulnerabilities

Minimal impact on PC performance for a range of usage scenarios Improved!
Kaspersky Internet Security 2013 is optimised so that it does not have a significant impact on network activity, the installation of programs, the launch of web browsers or the launch of programs. In addition, a special Gamer Mode ensures an uninterrupted game experience – while still keeping you secure.

Optimised antivirus databases Improved!
With antivirus information provided from the cloud, we've significantly reduced the size of the antivirus databases stored on your PC – which helps to improve performance and reduce the time taken for installation and updates.

Reduced Battery Drain New!
When it's installed on a laptop that is running on battery power,
Kaspersky Internet Security 2013 automatically reduces its usage of resources – to help increase the time the laptop can run before needing to be recharged.

Easy-to-use interface Improved!
The main interface window is optimised to help boost performance and ease of use for many popular user scenarios – including launching scans and fixing problems.

Quick launch of Virtual Keyboard Improved!
Virtual Keyboard allows you to use mouse-clicks to enter your banking information online – so your personal information can't be tracked or stolen by keyloggers, hackers or identity

thieves. Now, Kaspersky Internet Security 2013 allows fast access to the Virtual Keyboard from web-browsers.

Compatible with Windows 8... and delivers additional security New!
In addition to being fully compatible with Windows 8, Kaspersky Internet Security 2013 includes features that provide even greater protection:

- Kaspersky Now is a new application that has been developed to integrate with Microsoft's new user interface – to display your PC's protection status and enable the rapid launch of vital security features
- For other applications that are compatible with Microsoft's new user interface, Kaspersky technologies scan the applications for viruses – and infected applications are removed and then replaced with clean applications
- Integration with Early-Launch Anti-Malware (ELAM) technology – to provide protection even before your PC boots up
- Integration with Windows Security Centre's newly enhanced functionality

 System Requirements

Operating Systems*	Hardware Requirements
- Microsoft Windows XP Home Edition (Service Pack 2 or higher) - Microsoft Windows XP Professional (Service Pack 2 or higher) - Microsoft Windows XP Professional x64 Edition (Service Pack 2 or higher)	- Processor 800 MHz or higher - 512 MB available RAM
- Microsoft Windows Vista Home Basic (32/64 Bit) (Service Pack 1) - Microsoft Windows Vista Home Premium (32/64 Bit) (Service Pack 1) - Microsoft Windows Vista Business (32/64 Bit) (Service Pack 1) - Microsoft Windows Vista Enterprise (32/64 Bit) (Service Pack 1) - Microsoft Windows Vista Ultimate (32/64 Bit) (Service Pack 1) - Microsoft Windows 7 Starter - Microsoft Windows 7 Home Basic (32/64 Bit) - Microsoft Windows 7 Home Premium (32/64 Bit) - Microsoft Windows 7 Professional (32/64 Bit)	- Processor: 1 GHz or higher - 1 GB available RAM (32 Bit) or 2 GB available RAM (64 Bit)

• Microsoft Windows 7 Ultimate (32/64 Bit)	
• Microsoft Windows 8 (32/64 Bit)	• Processor: 1 GHz or higher • 1 GB available RAM (32 Bit) or 2 GB available RAM (64 Bit)

Required for all Installations

- Approximately 480 MB free space on the hard drive (depending on size of antivirus database)
- CD/DVD Drive – for installation of the program from CD ROM
- Computer mouse
- Internet connection – for product activation
- Microsoft Internet Explorer 8 or higher
- Microsoft Windows Installer 3.0 or higher

Hardware Requirements for Netbooks

- CPU: Intel Atom 1.6 GHz
- RAM: 1 GB DDR2
- Hard Disk: 160 GB
- Video Card: Intel GMA950
- Screen: 10.1 inch, 1024x600 widescreen
- Operating System: Microsoft Windows XP Home Edition
