Description

Advanced Power MOSFETs from APEC provide the designer with the best combination of fast switching, ruggedized device design, low on-resistance and cost-effectiveness. The AP6922GMT-HF-3 includes both hi-side ("control") FET and lo-side ("sync") FET, and the required Schottky diode for the power output stage of a synchronous buck converter. It is supplied in the PMPak[®]5x6 package, which has a foot print compatible with the popular SO-8 and offers a backside heat sink and a lower package profile.
