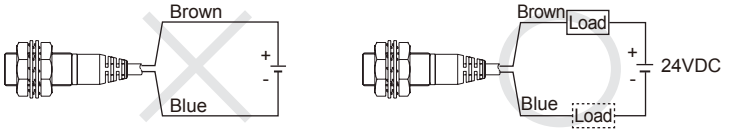
※Please fasten the cleat of connector not to shown the thread. (0.39 to 0.49N·m)
※Please fasten the vibration part with Teflon tape.
※Refer to the G-6 about IEC standard connector wires and specifications.

▣ Proper usage

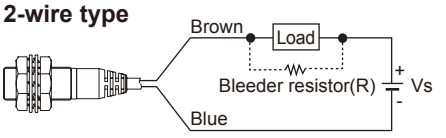
◎ Load connections



< DC 2-wire type > < DC 2-wire type >

◎ In case of the load current is small

● **DC 2-wire type**



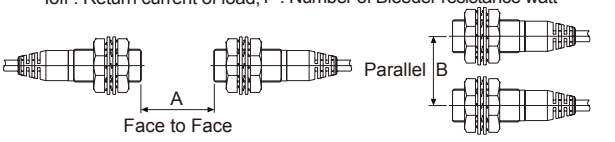
Please make the current on proximity sensor smaller than the return current of load by connecting a bleeder resistor in parallel.
※W value of Bleeder resistor should be bigger for proper heat dissipation.

$$R = \frac{Vs}{Io\text{-}Ioff}\ (\Omega) \qquad P = \frac{Vs^2}{R}\ (W)$$

[Vs : Power supply, Io : Min. action current of proximity sensor
Ioff : Return current of load, P : Number of Bleeder resistance watt]

◎ Mutual-interference

When several proximity sensors are mounted close to one another a malfunction of the sensor may be caused due to mutual interference. Therefore, be sure to provide a minimum distance between the two sensors as below chart indicates.



◎ Influence by surrounding metals

When sensors are mounted on metallic panel, you must prevent the sensors from being affected by any metallic object except target. Therefore, be sure to provide a minimum distance as below chart indicates.
