+ MOL (Maximum Overall Length):

The overall length of a lamp, from the top of the shell to the bottom of the base.

‡ MSCP (Mean Spherical Candlepower):

Candlepower produced at design volts. Candlepower is increased rapidly with an increase of applied voltage and conversely is reduced rapidly with a reduction of applied voltage.

++ LCL (Light Center Length):

The distance from a reference point, usually the bottom of the lamp base, to the center of the light source.
