Description

The LDL212 provides 1.2 A of maximum current from an input voltage range from 2.5 V to 18 V, with a typical dropout voltage of 350 mV @ 1.2 A. The high power supply rejection ratio of 87 dB at 120 Hz, and more than 40 dB at 100 kHz, makes the LDL212 suitable for direct regulation in SMPS and secondary linear regulation in DC-DC converters. The LDL212 goes to shutdown mode due to the enable logic control function, reducing the total current consumption. The device also includes the current limit, SOA and thermal protections.

3 Typical application

Figure 4: Typical application circuit (adjustable version)

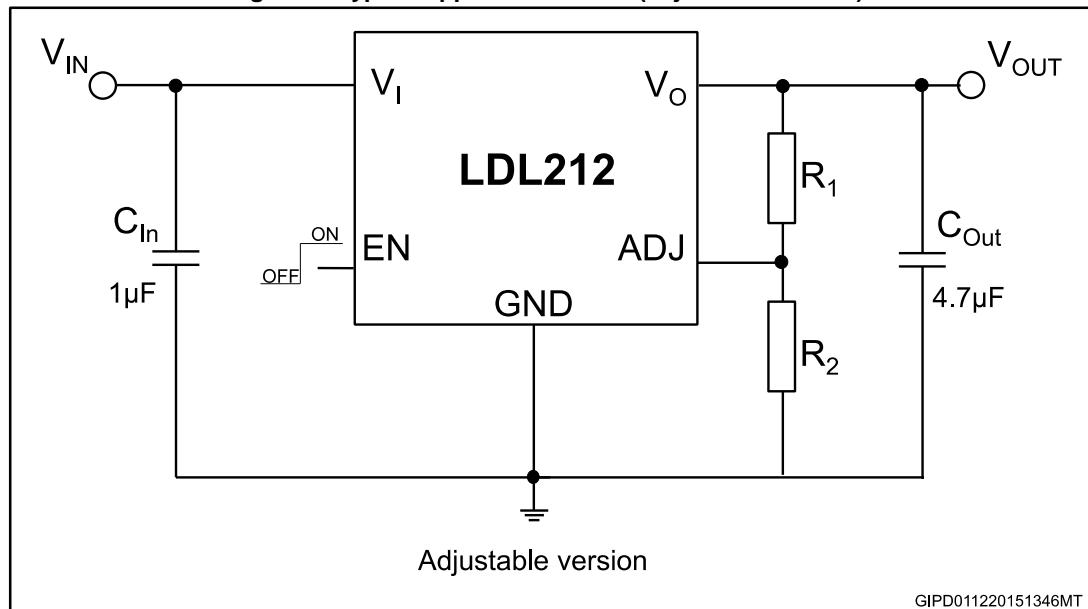

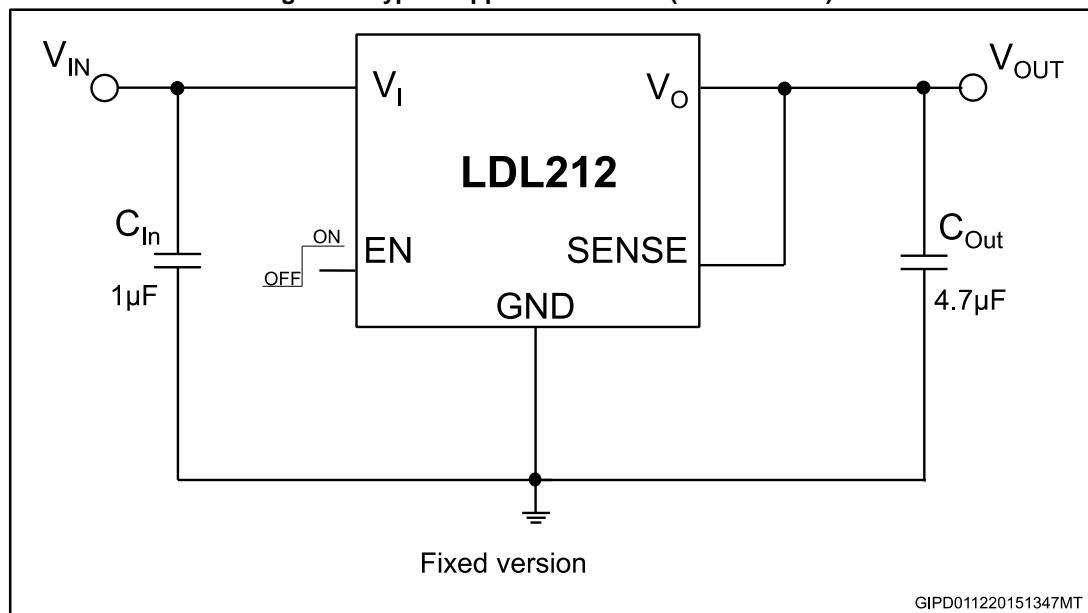

Figure 5: Typical application circuit (fixed version)

R1 and R2 are calculated according to the following formula:
 $R_1 = R_2 \times (V_{OUT}/V_{ADJ} - 1)$.

The output voltage of the adjustable version can be set from 1.18 V to $V_{IN} - V_{DROP(MAX)}$, where $V_{DROP(MAX)}$ is the maximum dropout voltage, as defined in [Table 4: "Electrical characteristics"](#).
