# **MTC1 Series**

### **FEATURES**

- UL 60950 recognised for reinforced insulation
- ANSI/AAMI ES60601-1, 1 MOPP/ 2 MOOPs recognised
- 3kVAC isolation test voltage 'Hi Pot Test'
- Continuous short circuit protection
- Output Voltage Trim
- Remote on/off pin
- No electrolytic capacitors
- Operating temperature range -40°C to 100°C
- 2:1 Input Range

### **PRODUCT OVERVIEW**

The MTC1 series of miniature surface mount DC/ DC converters offers a single output voltage from input voltage ranges of 9-18V and 18-36V. The MTC1 series regulated output voltage is adjustable by  $\pm 10\%$  and a remote on/off pin is also included for application power saving.

The MTC1 ideally suited to applications which include medical. Industrial, telecommunications, battery powered systems, and process automation.

1. Components are supplied in tape and reel packaging, please refer to package specification section. Orderable part numbers are MTC1SXXXXMC-R7 (30 pieces per reel), or MTC1SXXXXMC-R13 (150 pieces per reel)

2. Calculated using MIL-HDBK-217 FN2 and Telecordia SR-332 calculation model with nominal input voltage at full load.

All specifications typical at T<sub>A</sub>=25°C, nominal input voltage and rated output current unless otherwise specified.

#### APPLICATION NOTES

#### Maximum Output Capacitance

Maximum output capacitance should not exceed:

| Output Voltage | Maximum Load Capacitance |
|----------------|--------------------------|
| V              | μF                       |
| 3.3            | 470                      |
| 5              | 470                      |
| 12             | 220                      |

#### Start-up times

Typical start up times for this series, with a typical input voltage rise time of 2.2µs and output capacitance of 10µF, are shown in the table below. The product series will start into the maximum output capacitance with increased start times. Typical Wave Form:

| Dort No.    | Start-up times |
|-------------|----------------|
| Fait NU.    | ms             |
| MTC1S1203MC | 5              |

# **MTC1 Series**

### Isolated 1W SM 2:1 Input Single Output DC/DC Converters

#### APPLICATION NOTES

#### Control Pin

The MTC1 converters have a shutdown feature which enables the user to put the converter into a low power state. The control pin connects directly to the base of an internal transistor, and the switch off mechanism for the MTC1 works by forward biasing this NPN transistor. If the pin is left open (high impedance), the converter will be ON (there is no allowed low state for this pin), but once a control voltage is applied with sufficient drive current, the converter will be switched OFF. A suitable application circuit is shown below.

 $D_1$  (e.g. 1N4001) is required to provide high impedence when the signal is low. From the MTC1 specification, the drive current to operate this function is recommended to be 3mA to 8mA, and hence the value of R, can be derived as follows:

$$R_1 = \frac{V_c - V_D - 0.6}{I_B}$$

Assuming  $V_c = 5V, V_p = 0.7V$ :

$$R_1 = \frac{5 - 0.7 - 0.6}{5 \times 10^{-3}} = 732\Omega$$
 (E96, 1% resistor)

For 5V TTL signal: Set R1 to be 82Ω or less

#### **Output Voltage Adjustment**

The MTC1S series has a trim capability which is located at pin 3, this allows the user to independently adjust the output voltages by  $\pm 10\%$ . Adjustments to the output voltages can be accomplished via a single fixed resistor as shown in Figures 1 and 2. A single fixed resistor can increase or decrease the output voltage depending on its connection. Fixed resistors should have low temperature coefficient to minimize sensitivity to changes in temperature.

A single resistor connected from the TRIM pin (pin 3) to the +Vout (pin 4), will decrease the output voltage which is shown in figure 1.

A single resistor connected from the TRIM pin (pin 3) to the -Vout (pin 2) will increase the output voltage which is shown in figure 2.

Accuracy of adjustment is subject to tolerances of resistors and factory adjusted output accuracy. Vout is equal to the desired output voltage.

#### **TECHNICAL NOTES**

#### **ISOLATION VOLTAGE**

'Hi Pot Test', 'Flash Tested', 'Withstand Voltage', 'Proof Voltage', 'Dielectric Withstand Voltage' & 'Isolation Test Voltage' are all terms that relate to the same thing, a test voltage, applied for a specified time, across a component designed to provide electrical isolation, to verify the integrity of that isolation.

Murata Power Solutions MTC1 series of DC/DC converters are all 100% production tested at 3kVAC for 1 second and have been qualification tested at 3kVAC for 1 minute. A question commonly asked is, "What is the continuous voltage that can be applied across the part in normal operation?"

The MTC1 series has been recognized by Underwiters Laboratory to 250 Vrms Reinforced Insulation, please see safety approval section below.

#### **REPEATED HIGH-VOLTAGE ISOLATION TESTING**

It is well known that repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials, construction and environment. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage.

#### SAFETY APPROVAL

#### ANSI/AAMI ES60601-1

The MTC1 series has been recognised by Underwriters Laboratory (UL) to ANSI/AAMI ES60601-1 and provides 1 MOPP (Means Of Patient Protection) and 2 MOOP (Means Of Operator Protection) based upon a working voltage of 250 Vrms max., between Primary and Secondary. File number E202895 applies.

#### UL 60950

The MTC1 series has been recognised by Underwriters Laboratory (UL) to UL 60950 for reinforced insulation to a working voltage of 250 Vrms. File number E151252 applies.

#### FUSING

The MTC1 Series of converters are not internally fused so to meet the requirements of UL an anti-surge input line fuse should always be used with ratings as defined below. Input Voltage, 12V: 0.5A

Input Voltage, 24V: 0.25A

All fuses should be UL recognized and rated to 125V.

#### **RoHS COMPLIANCE INFORMATION, MSL**

This series is compatible with RoHS soldering systems with a peak reflow solder temperature of 245°C as per J-STD-020D.1. The pin termination finish on this product series is Gold with Nickel Pre-plate. The series is backward compatible with Sn/Pb soldering systems. The series has a Moisture Sensitivity Level (MSL) 1.

#### **CHARACTERISATION TEST METHODS**

| Ripple & Nois | se Characterisation | Method |
|---------------|---------------------|--------|
|---------------|---------------------|--------|

Ripple and noise measurements are performed with the following test configuration.

| C1          | 1µF X7R multilayer ceramic capacitor, voltage rating to be a minimum of 3 times the output voltage of the DC/DC converter  |
|-------------|--|
| C2          | $10\mu$ F tantalum capacitor, voltage rating to be a minimum of 1.5 times the output voltage of the DC/DC converter with an ESR of less than $100m\Omega$ at $100$ kHz |
| C3          | 100nF multilayer ceramic capacitor, general purpose  |
| R1          | 450Ω resistor, carbon film, $\pm$ 1% tolerance   |
| R2          | 50Ω BNC termination  |
| T1          | 3T of the coax cable through a ferrite toroid  |
| RLOAD       | Resistive load to the maximum power rating of the DC/DC converter. Connections should be made via twisted wires  |
| Measured va | ues are multiplied by 10 to obtain the specified values.   |
