

PUK 10 ALL Soldering Tip Cleaner with Metal Holder

With the help of the soldering and desoldering tip cleaner PUK 10 you can reactivate fast tips that they accept again solder.

The “green disc” should be placed on a plan, non-slip and heat resistant part. Hold the passive soldering or desoldering tip “into” or on the green disc PUK 10. After this working step the soldering or desoldering tip is clean and can be retinned. You can go on with working without any time and cost intensive change of the soldering tip.

A further important point is that there is no halogen integrated in the PUK 10. There are no unwanted residues on the PCB. Additional corrosion of the soldering and desoldering tips are reduced.

Very often the user complains the unpleasant odor and the smoke emission. This is real low with PUK 10! Additional there are added some natural oil with a pleasant smell.

Troublesome cleaning of the tips with steel brushes is avoided. The lifetime of the soldering tip will be much longer. The use of the soldering tip cleaner PUK 10 allows an attractive cost - benefit ratio. The supplied metal holder ensures safe working on the workplace. Burning of the table top is avoided. The rubber feet are non-slip, so that the holder with the PUK 10 is secure on the workplace.

Advantages:

- Free of halogenids
- No sand, which hurts the alloy of the soldering tip
- Leaded and unleaded
- Easy handling
- Attractive cost-benefit ratio
- Simple form allows an easy storage
- With a diameter of abt. 6 cm and a height of abt. 3 cm you can find a place in each service suitcase or working desk
- Weight: 95g
