

Accante Covers Ultimaker 2+ Extended

The cover for the Ultimaker printers consists of an upper enclosure, a filter and a door. This cover allows you to have a completely enclosed and secure printer.

- A constant temperature to prevent warping (detachment of the part) and facilitate 3D prints that require difficult-to-print materials (ABS, PC)
- The air is replaced using a professional fan and HEPA filter
- No more draughts during printing
- The cover can be installed and uninstalled easily without damaging the printer.
- A latch closes the door and protects prints from any outside access. This latch is particularly useful in an educational context to protect high-temperature parts
- No odour or smoke escapes from the printer thanks to the HEPA filter which has a working life of between 600 and 1200 hours depending on the materials and print settings

Within each kit contains the following items:

- 6 PPMA panels (for the upper enclosure)
- 1 PPMA door
- 1 felt Bowden tube protector
- 1 Plexiglas attachment
- 1 plastic ABS seal kit
- 1 screw and bolt kit for the assembly
- 1 filtration kit with fan included
- 1 HEPA filter
- 1 power cable
