

GreenPAK™

Q4 2021

GreenPAK Programmable Mixed-Signal

GreenPAK, a member of Renesas' Programmable Mixed-signal ASIC products, is a cost-effective one-time NVM programmable device which enables innovators to integrate many system functions while minimizing component count, board space, and power consumption.

Using GreenPAK Designer software and GreenPAK Development Kit designers can create and program a custom circuit in minutes.

Now supporting Automotive grade GreenPAK devices.

GreenPAK IS IDEAL FOR

- Functional replacement of popular mixed-signal standard products, often in combination.
- Providing reliable hardware safety, supervisory and reset functions for software coded devices, such as SoCs and microcontrollers.

BENEFITS OVER DISCRETE DESIGN

- **Smaller PCB footprint** – Plastic packages as small as 1.0 mm x 1.2 mm.
- **Fewer Components/Lower Cost** – A typical GreenPAK implementation removes from ten to thirty components per instance.
- **Higher Reliability** – Fewer PCB interconnects increases reliability.
- **Faster Design** – Develop and program devices in minutes at your desk. Quickly respond to changing design requirements and increase productivity at the design and prototype verification stages.
- **Lower Power** – Save power by removing discrete resistors in voltage dividers, pull ups, pull downs, etc. and replacing with low-power, integrated components. Further reduce power consumption using the sleep function.
- **Design Security** – Makes reverse engineering substantially more difficult by disabling the read-back of NVM configuration, obscuring design details.
- **Tested Solution** – Every GreenPAK is 100% tested. A discrete circuit is not tested prior to the final board level test.

GreenPAK EXAMPLES

By Application

- Power Sequencing
- System Reset
- Level Shift
- LED Control
- Over Voltage Protection
- Voltage Detection
- Sensor Interface
- Port Detection
- IO Expansion
- Motor & Fan Control

By Function

- State Machine
- Timing Delays and Counters
- Voltage Monitoring by ACMP or ADC
- Voltage Reference
- Pulse Width Modulator
- Glue Logic

By Market

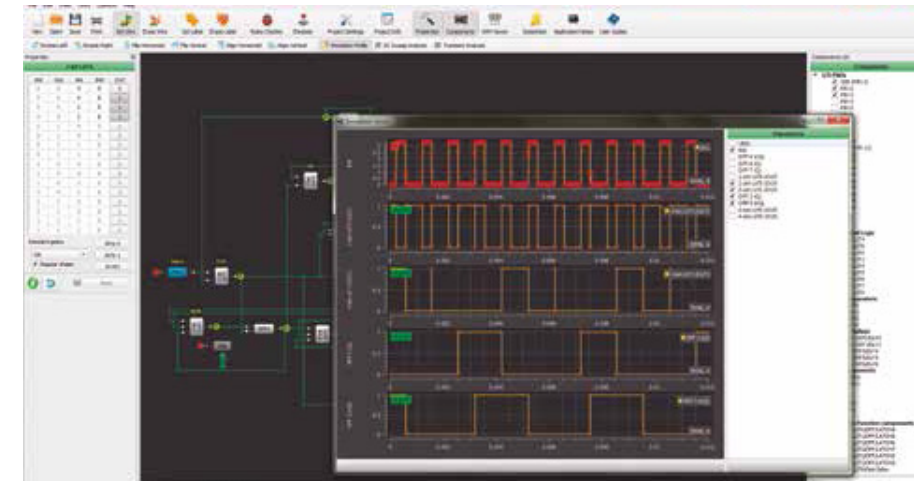

- Handheld Devices
- Wearable Electronics
- Internet of Things
- Computing & Storage
- Consumer Electronics
- Smart Home
- Networking & Communications
- Medical
- Automotive

DEVELOPMENT SOFTWARE

Renesas' GreenPAK Designer development software enables a completely graphical design process, requiring no programming language or compiler, allowing a designer to configure, program, and test custom GreenPAK samples in minutes.

- Schematic capture-like design and routing
- Entire component library showing available resources for each device
- Easy component configuration
- Example projects and support documentation

UNIVERSAL DEVELOPMENT KIT

Working in tandem with the GreenPAK Designer Emulator, Dialog Technology's Universal Development Kit allows designers to

- Program custom samples in minutes
- Test GreenPAK projects in-circuit
- Develop using any GreenPAK device
