

Rotational field indicator 100 - 700 V AC, CAT IV (45221)

Wiha Werkzeuge GmbH
Obertalstraße 3-7 78136 Schonach
E-Mail: info.de@wiha.com
Tel.: +49 (0)7722 959-0

Order no.: 45221

Article number: SB25562

EAN: 4010995452216

Customs tariff number: 90303370

Simplifies your work: LED display for easy to read measurement results.

Increases your efficiency: Simple determination of the rotary field and phase indication in a single tool.

Increases your flexibility: Testing tips for variable application options.

Dimensions: 93 x 75 x 31 mm

Application: Determination of the rotation direction and monitoring the phases.

Measuring category: CAT IV up to 600 V.

Standard: IP 40.

Determining the direction of rotation in a three-phase power supply to check electrical connections? Not a problem with the Wiha rotational field indicator with integrated phase display. The rotation direction as well as the live phases are reliably identified with the help of an LED display. A crocodile clip included with the delivery allows a simple connection, e.g. with a motor terminal board. In combination with the included test tips, the rotation indicator from Wiha offers great testing flexibility. The rotational field indicator works with the mains voltage itself, so no batteries are required. According to the measurement category CAT III up to 1,000 V and CAT IV up to 600 V the rotation indicator offers maximum safety for working directly on the source of low voltage installations.
IEC/EN 61010-1; IEC/EN 61577-7; IEC/EN 611010-031.
