The ScopeAdvanceTrigger type exposes the following members.

Properties

Name	Description
 DigitalEdge	Gets the ScopeDigitalEdgeAdvanceTrigger sub-object that contains properties and methods that are related to digital edge advance triggers.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 SendSoftwareEdgeTrigger	Sends the advance trigger to the digitizer. Call this method if Source has been configured to SoftwareTriggerFunction .
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeAdvanceTriggerDigitalEdge Property

Gets the [ScopeDigitalEdgeAdvanceTrigger](#) sub-object that contains properties and methods that are related to digital edge advance triggers.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public ScopeDigitalEdgeAdvanceTrigger DigitalEdge { get; }
```

```
Public ReadOnly Property DigitalEdge As ScopeDigitalEdgeAdvanceTrigger
    Get
```

Property Value

Type: [ScopeDigitalEdgeAdvanceTrigger](#)

The [ScopeDigitalEdgeAdvanceTrigger](#) sub-object that contains properties and methods that are related to digital edge advance triggers.

ScopeAdvanceTriggerExportedOutputTerminal Class

Represents the output terminal for [ScopeAdvanceTrigger](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerm

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeAdvanceTriggerExportedOutputTerminal
```

```
Public NotInheritable Class ScopeAdvanceTriggerExportedOutputTerminal
```

The `ScopeAdvanceTriggerExportedOutputTerminal` type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.

 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of <code>ScopeAdvanceTriggerExportedOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeAdvanceTriggerExportedOutputTerminal)	Determines whether the current instance of <code>ScopeAdvanceTriggerExportedOutputTerminal</code> and the specified <code>ScopeAdvanceTriggerExportedOutputTerminal</code> object are equal.
 FromString 	Creates a <code>ScopeAdvanceTriggerExportedOutputTerminal</code> object from the specified <code>String</code> .
 GetHashCode	Gets the hash code for the current instance of <code>ScopeAdvanceTriggerExportedOutputTerminal</code> . (Overrides ObjectGetHashCode .)
 GetType	Gets the <code>Type</code> of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of <code>ScopeAdvanceTriggerExportedOutputTerminal</code> to <code>String</code> . (Overrides ObjectToString .)

[Top](#)

Operators

Name	Description
------	-------------

 <u>Equality</u>	Checks whether two <code>ScopeAdvanceTriggerExportedOutputTerminal</code> object instances are equal.
 <u>(String to <code>ScopeAdvanceTriggerExportedOutputTerminal</code>)</u>	Converts a specified <code>String</code> to an equivalent <code>ScopeAdvanceTriggerExportedOutputTerminal</code> object.
 <u>(<code>ScopeAdvanceTriggerExportedOutputTerminal</code> to String)</u>	Converts a <code>ScopeAdvanceTriggerExportedOutputTerminal</code> object to an equivalent <code>String</code> .
 <u>Inequality</u>	Checks whether two <code>ScopeAdvanceTriggerExportedOutputTerminal</code> object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

ScopeAdvanceTriggerExportedOutputTerminal Properties

The [ScopeAdvanceTriggerExportedOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

ScopeAdvanceTriggerExportedOutputTerminalRtsi4

Gets the output terminal for RTSI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerExportedOutputTerminal Rtsi4 { get; }
```

```
Public Shared ReadOnly Property Rtsi4 As  
ScopeAdvanceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

A [ScopeAdvanceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_4".

ScopeAdvanceTriggerExportedOutputTerminalRtsi5

Gets the output terminal for RTSI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerExportedOutputTerminal Rtsi5 { get; }
```

```
Public Shared ReadOnly Property Rtsi5 As  
ScopeAdvanceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

A [ScopeAdvanceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_5".

ScopeAdvanceTriggerExportedOutputTerminalRtsi6

Gets the output terminal for RTSI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerExportedOutputTerminal Rtsi6 { get; }
```

```
Public Shared ReadOnly Property Rtsi6 As
ScopeAdvanceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

A [ScopeAdvanceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_6".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerExportedOutputTerminal Rtsi7 { get; }
```

```
Public Shared ReadOnly Property Rtsi7 As
ScopeAdvanceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

A [ScopeAdvanceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSL_7".

ScopeAdvanceTriggerExportedOutputTerminal Properties

The [ScopeAdvanceTriggerExportedOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.

 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

ScopeAdvanceTriggerExportedOutputTerminalClockOut Property

Gets the output terminal for CLK OUT.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerExportedOutputTerminal ClockOut { get; }
```

```
Public Shared ReadOnly Property ClockOut As  
ScopeAdvanceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

A [ScopeAdvanceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_CLK_OUT".

ScopeAdvanceTriggerExportedOutputTerminal Methods

The [ScopeAdvanceTriggerExportedOutputTerminal](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeAdvanceTriggerExportedOutputTerminal and the specified object are equal.

		(Overrides ObjectEquals(Object) .)
⇒	Equals(ScopeAdvanceTriggerExportedOutputTerminal)	Determines whether the current instance of ScopeAdvanceTriggerExportedOutputTerminal and the specified ScopeAdvanceTriggerExportedOutputTerminal object are equal.
⇒	FromString	Creates a ScopeAdvanceTriggerExportedOutputTerminal object from the specified String .
⇒	GetHashCode	Gets the hash code for the current instance of ScopeAdvanceTriggerExportedOutputTerminal . (Overrides ObjectGetHashCode .)
⇒	GetType	Gets the Type of the current instance. (Inherited from Object .)
⇒	ToString	Converts the current instance of ScopeAdvanceTriggerExportedOutputTerminal to String . (Overrides ObjectToString .)

ScopeAdvanceTriggerExportedOutputTerminalEquals

Determines whether the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (
    obj As Object
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Determines whether the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#) and the specified [ScopeAdvanceTriggerExportedOutputTerminal](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public bool Equals(
    ScopeAdvanceTriggerExportedOutputTerminal source
)
```

```
Public Function Equals (
    source As ScopeAdvanceTriggerExportedOutputTerminal
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerminal](#)
 Specifies the [ScopeAdvanceTriggerExportedOutputTerminal](#) object to compare to the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeAdvanceTriggerExportedOutputTerminalEquals

Determines whether the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (
    obj As Object
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeAdvanceTriggerExportedOutputTerminalEquals Method (Object)

Determines whether the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (
    obj As Object
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeAdvanceTriggerExportedOutputTerminalEquals Method
(ScopeAdvanceTriggerExportedOutputTerminal)

Determines whether the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#) and the specified [ScopeAdvanceTriggerExportedOutputTerminal](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeAdvanceTriggerExportedOutputTerminal source  
)
```

```
Public Function Equals (  
    source As ScopeAdvanceTriggerExportedOutputTerminal  
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerminal](#)
Specifies the [ScopeAdvanceTriggerExportedOutputTerminal](#) object to compare to the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeAdvanceTriggerExportedOutputTerminalFromString Method

Creates a [ScopeAdvanceTriggerExportedOutputTerminal](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerExportedOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeAdvanceTriggerExportedOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeAdvanceTriggerExportedOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

Returns an object of type [ScopeAdvanceTriggerExportedOutputTerminal](#) representing the specified source [String](#).

ScopeAdvanceTriggerExportedOutputTerminalGetHashCode Method

Gets the hash code for the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override string ToString()
```

```
Public Overrides Function ToString As String
```

Return Value

Type: [String](#)

Returns a [String](#) representing the current instance of [ScopeAdvanceTriggerExportedOutputTerminal](#).

ScopeAdvanceTriggerExportedOutputTerminal Operators and Type Conversions

The [ScopeAdvanceTriggerExportedOutputTerminal](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeAdvanceTriggerExportedOutputTerminal object instances are equal.

 (String to ScopeAdvanceTriggerExportedOutputTerminal)	Converts a specified String to an equivalent ScopeAdvanceTriggerExportedOutputTerminal object.
 (ScopeAdvanceTriggerExportedOutputTerminal to String)	Converts a ScopeAdvanceTriggerExportedOutputTerminal object to an equivalent String .
 Inequality	Checks whether two ScopeAdvanceTriggerExportedOutputTerminal object instances are not equal.

ScopeAdvanceTriggerExportedOutputTerminalEquality

Checks whether two [ScopeAdvanceTriggerExportedOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeAdvanceTriggerExportedOutputTerminal source1,
    ScopeAdvanceTriggerExportedOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeAdvanceTriggerExportedOutputTerminal,
    source2 As ScopeAdvanceTriggerExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerminal](#)
 Specifies the first [ScopeAdvanceTriggerExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerminal](#)
 Specifies the second [ScopeAdvanceTriggerExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeAdvanceTriggerExportedOutputTerminalEquality Operator

Checks whether two [ScopeAdvanceTriggerExportedOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeAdvanceTriggerExportedOutputTerminal source1,
    ScopeAdvanceTriggerExportedOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeAdvanceTriggerExportedOutputTerminal,
    source2 As ScopeAdvanceTriggerExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerminal](#)
 Specifies the first [ScopeAdvanceTriggerExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerminal](#)
 Specifies the second [ScopeAdvanceTriggerExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Converts a specified [String](#) to an equivalent [ScopeAdvanceTriggerExportedOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public static implicit operator ScopeAdvanceTriggerExportedOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (
    source As String
) As ScopeAdvanceTriggerExportedOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeAdvanceTriggerExportedOutputTerminal](#) object.

Return Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

Returns the [ScopeAdvanceTriggerExportedOutputTerminal](#) object representing the specified [String](#).

Converts a specified [String](#) to an equivalent [ScopeAdvanceTriggerExportedOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeAdvanceTriggerExportedOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (
    source As String
) As ScopeAdvanceTriggerExportedOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeAdvanceTriggerExportedOutputTerminal](#) object.

Return Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

Returns the [ScopeAdvanceTriggerExportedOutputTerminal](#) object representing the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator string (  
    ScopeAdvanceTriggerExportedOutputTerminal source  
)
```

```
Public Shared Widening Operator CType (  
    source As ScopeAdvanceTriggerExportedOutputTerminal  
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerminal](#)
Specifies the [ScopeAdvanceTriggerExportedOutputTerminal](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeAdvanceTriggerExportedOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(
    ScopeAdvanceTriggerExportedOutputTerminal source1,
    ScopeAdvanceTriggerExportedOutputTerminal source2
)
```

```
Public Shared Operator <> (
    source1 As ScopeAdvanceTriggerExportedOutputTerminal,
    source2 As ScopeAdvanceTriggerExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerminal](#)
Specifies the first [ScopeAdvanceTriggerExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerExportedOutputTerminal](#)
Specifies the second [ScopeAdvanceTriggerExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeAdvanceTriggerSource Class

Represents the source terminal for [ScopeDigitalEdgeAdvanceTrigger](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerSource

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeAdvanceTriggerSource
```

```
Public NotInheritable Class ScopeAdvanceTriggerSource
```

The ScopeAdvanceTriggerSource type exposes the following members.

Properties

	Name	Description
	Immediate	Gets the source terminal for Immediate.

 Pfi0	Gets the source terminal for PFI 0.
 Pfi1	Gets the source terminal for PFI 1.
 Pfi2	Gets the source terminal for PFI 2.
 PxiStar	Gets the source terminal for PXI STAR.
 Rtsi0	Gets the source terminal for RTSI 0.
 Rtsi1	Gets the source terminal for RTSI 1.
 Rtsi2	Gets the source terminal for RTSI 2.
 Rtsi3	Gets the source terminal for RTSI 3.
 Rtsi4	Gets the source terminal for RTSI 4.
 Rtsi5	Gets the source terminal for RTSI 5.
 Rtsi6	Gets the source terminal for RTSI 6.
 Rtsi7	Gets the source terminal for RTSI 7.
 SoftwareTriggerFunction	Gets the source terminal for the software trigger.

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of <code>ScopeAdvanceTriggerSource</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeAdvanceTriggerSource)	Determines whether the current instance of <code>ScopeAdvanceTriggerSource</code> and the specified <code>ScopeAdvanceTriggerSource</code> object are equal.
	FromString	Creates a <code>ScopeAdvanceTriggerSource</code> object from the specified String .
	GetHashCode	Gets the hash code for the current instance of <code>ScopeAdvanceTriggerSource</code> . (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of <code>ScopeAdvanceTriggerSource</code> to String . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
	Equality	Checks whether two <code>ScopeAdvanceTriggerSource</code> object instances are equal.
	(String to ScopeAdvanceTriggerSource)	Converts a specified <code>String</code> to an equivalent <code>ScopeAdvanceTriggerSource</code> object.
	(ScopeAdvanceTriggerSource to String)	Converts a <code>ScopeAdvanceTriggerSource</code> object to an equivalent <code>String</code> .
	Inequality	Checks whether two <code>ScopeAdvanceTriggerSource</code> object instances are not equal.

ScopeAdvanceTriggerSourceRtsi7 Property

Gets the source terminal for RTSI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerSource Rtsi7 { get; }
```

```
Public Shared ReadOnly Property Rtsi7 As ScopeAdvanceTriggerSource  
    Get
```

Property Value

Type: [ScopeAdvanceTriggerSource](#)

A [ScopeAdvanceTriggerSource](#) representing the [String](#) "VAL_RTSI_7".

ScopeAdvanceTriggerSourceSoftwareTriggerFunction

Gets the source terminal for the software trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerSource SoftwareTriggerFunction { get; }
```

```
Public Shared ReadOnly Property SoftwareTriggerFunction As  
ScopeAdvanceTriggerSource  
Get
```

Property Value

Type: [ScopeAdvanceTriggerSource](#)

A [ScopeAdvanceTriggerSource](#) representing the [String](#) "VAL_SW_TRIG_FUNC".

See Also

ScopeAdvanceTriggerSource Properties

The [ScopeAdvanceTriggerSource](#) type exposes the following members.

Properties

	Name	Description
	Immediate	Gets the source terminal for Immediate.
	Pfi0	Gets the source terminal for PFI 0.
	Pfi1	Gets the source terminal for PFI 1.
	Pfi2	Gets the source terminal for PFI 2.
	PxiStar	Gets the source terminal for PXI STAR.
	Rtsi0	Gets the source terminal for RTSI 0.
	Rtsi1	Gets the source terminal for RTSI 1.

 Rtsi2	Gets the source terminal for RTSI 2.
 Rtsi3	Gets the source terminal for RTSI 3.
 Rtsi4	Gets the source terminal for RTSI 4.
 Rtsi5	Gets the source terminal for RTSI 5.
 Rtsi6	Gets the source terminal for RTSI 6.
 Rtsi7	Gets the source terminal for RTSI 7.
 SoftwareTriggerFunction	Gets the source terminal for the software trigger.

ScopeAdvanceTriggerSourceImmediate Property

Gets the source terminal for Immediate.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerSource Immediate { get; }
```

```
Public Shared ReadOnly Property Immediate As ScopeAdvanceTriggerSource  
    Get
```

Property Value

Type: [ScopeAdvanceTriggerSource](#)

A [ScopeAdvanceTriggerSource](#) representing the [String](#) "VAL_IMMEDIATE".

ScopeAdvanceTriggerSourcePfi0 Property

Gets the source terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerSource Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeAdvanceTriggerSource  
    Get
```

Property Value

Type: [ScopeAdvanceTriggerSource](#)

A [ScopeAdvanceTriggerSource](#) representing the [String](#) "VAL_PFI_0".

ScopeAdvanceTriggerSourceRtsi4 Property

Gets the source terminal for RTSI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerSource Rtsi4 { get; }
```

```
Public Shared ReadOnly Property Rtsi4 As ScopeAdvanceTriggerSource  
    Get
```

Property Value

Type: [ScopeAdvanceTriggerSource](#)

A [ScopeAdvanceTriggerSource](#) representing the [String](#) "VAL_RTISI_4".

ScopeAdvanceTriggerSource Methods

The [ScopeAdvanceTriggerSource](#) type exposes the following members.

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeAdvanceTriggerSource and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeAdvanceTriggerSource)	Determines whether the current instance of ScopeAdvanceTriggerSource and the specified ScopeAdvanceTriggerSource object are equal.
	FromString	Creates a ScopeAdvanceTriggerSource object from the specified String .
	GetHashCode	Gets the hash code for the current instance of ScopeAdvanceTriggerSource . (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of ScopeAdvanceTriggerSource to String . (Overrides ObjectToString .)

ScopeAdvanceTriggerSourceEquals Method (Object)

Determines whether the current instance of [ScopeAdvanceTriggerSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeAdvanceTriggerSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

ScopeAdvanceTriggerSourceFromString Method

Creates a [ScopeAdvanceTriggerSource](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeAdvanceTriggerSource FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeAdvanceTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeAdvanceTriggerSource](#) object returned represents.

Return Value

Type: [ScopeAdvanceTriggerSource](#)

Returns an object of type [ScopeAdvanceTriggerSource](#) representing the specified source [String](#).

ScopeAdvanceTriggerSource.GetHashCode Method

Gets the hash code for the current instance of [ScopeAdvanceTriggerSource](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeAdvanceTriggerSource](#).

ScopeAdvanceTriggerSource Operators and Type Conversions

The [ScopeAdvanceTriggerSource](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeAdvanceTriggerSource object instances are equal.
	(String to ScopeAdvanceTriggerSource)	Converts a specified String to an equivalent ScopeAdvanceTriggerSource object.
	(ScopeAdvanceTriggerSource to String)	Converts a ScopeAdvanceTriggerSource object to an equivalent String .
	Inequality	Checks whether two ScopeAdvanceTriggerSource object instances are not equal.

ScopeAdvanceTriggerSourceEquality Operator

Checks whether two [ScopeAdvanceTriggerSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeAdvanceTriggerSource source1,
    ScopeAdvanceTriggerSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeAdvanceTriggerSource,
    source2 As ScopeAdvanceTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerSource](#)
Specifies the first [ScopeAdvanceTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerSource](#)
Specifies the second [ScopeAdvanceTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeAdvanceTriggerSourceEquality Operator

Checks whether two [ScopeAdvanceTriggerSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeAdvanceTriggerSource source1,
    ScopeAdvanceTriggerSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeAdvanceTriggerSource,
    source2 As ScopeAdvanceTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerSource](#)
Specifies the first [ScopeAdvanceTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerSource](#)
Specifies the second [ScopeAdvanceTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeAdvanceTriggerSource Conversion (String to ScopeAdvanceTriggerSource)

Converts a specified [String](#) to an equivalent [ScopeAdvanceTriggerSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeAdvanceTriggerSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeAdvanceTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeAdvanceTriggerSource](#) object.

Return Value

Type: [ScopeAdvanceTriggerSource](#)

Returns the [ScopeAdvanceTriggerSource](#) object representing the specified [String](#).

Converts a specified [String](#) to an equivalent [ScopeAdvanceTriggerSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeAdvanceTriggerSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeAdvanceTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeAdvanceTriggerSource](#) object.

Return Value

Type: [ScopeAdvanceTriggerSource](#)

Returns the [ScopeAdvanceTriggerSource](#) object representing the specified [String](#).

ScopeAdvanceTriggerSource Conversion (ScopeAdvanceTriggerSource to String)

Converts a [ScopeAdvanceTriggerSource](#) object to an equivalent [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator string (  
    ScopeAdvanceTriggerSource source  
)
```

```
Public Shared Widening Operator CType (  
    source As ScopeAdvanceTriggerSource  
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerSource](#)
Specifies the [ScopeAdvanceTriggerSource](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeAdvanceTriggerSource](#) object.

ScopeAdvanceTriggerSourceInequality Operator

Checks whether two [ScopeAdvanceTriggerSource](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(  
    ScopeAdvanceTriggerSource source1,  
    ScopeAdvanceTriggerSource source2  
)
```

```
Public Shared Operator <> (  
    source1 As ScopeAdvanceTriggerSource,  
    source2 As ScopeAdvanceTriggerSource  
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerSource](#)
Specifies the first [ScopeAdvanceTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeAdvanceTriggerSource](#)
Specifies the second [ScopeAdvanceTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeArmReferenceTrigger Class

Represents the `ScopeArmReferenceTrigger` sub-objects that contain properties and methods related to the arm reference trigger.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeArmReferenceTrigger](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax

C#VB

```
public sealed class ScopeArmReferenceTrigger : ScopeSubObject
```

```
Public NotInheritable Class ScopeArmReferenceTrigger
    Inherits ScopeSubObject
```

The `ScopeArmReferenceTrigger` type exposes the following members.

Properties

Name	Description
 DigitalEdge	Gets a ScopeDigitalEdgeArmReferenceTrigger sub-object that specifies properties and methods related to digital edge arm reference triggers.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 SendSoftwareEdgeTrigger	Sends the arm reference trigger to the digitizer. Call this method if you set Source to SoftwareTriggerFunction .
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

An analog edge trigger occurs when the trigger signal passes through the voltage threshold specified by [Level](#) and has the slope specified by [Slope](#).

For more information, refer to the Configure Trigger topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeArmReferenceTriggerSource Class

Represents the source terminal for [ScopeDigitalEdgeArmReferenceTrigger](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeArmReferenceTriggerSource

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeArmReferenceTriggerSource
```

```
Public NotInheritable Class ScopeArmReferenceTriggerSource
```

The ScopeArmReferenceTriggerSource type exposes the following members.

Properties

	Name	Description
	Immediate	Gets the source terminal for Immediate.
	Pfi0	Gets the source terminal for PFI 0.
	Pfi1	Gets the source terminal for PFI 1.
	Pfi2	Gets the source terminal for PFI 2.
	PxiStar	Gets the source terminal for PXI STAR.
	Rtsi0	Gets the source terminal for RTSI 0.
	Rtsi1	Gets the source terminal for RTSI 1.
	Rtsi2	Gets the source terminal for RTSI 2.
	Rtsi3	Gets the source terminal for RTSI 3.
	Rtsi4	Gets the source terminal for RTSI 4.
	Rtsi5	Gets the source terminal for RTSI 5.
	Rtsi6	Gets the source terminal for RTSI 6.
	Rtsi7	Gets the source terminal for RTSI 7.
	SoftwareTriggerFunction	Gets the source terminal for the software trigger.

Top

Methods

Name	Description
------	-------------

 Equals(Object)	Determines whether the current instance of <code>ScopeArmReferenceTriggerSource</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeArmReferenceTriggerSource)	Determines whether the current instance of <code>ScopeArmReferenceTriggerSource</code> and the specified <code>ScopeArmReferenceTriggerSource</code> object are equal.
 FromString	Creates a <code>ScopeArmReferenceTriggerSource</code> object from the specified <code>String</code> .
 GetHashCode	Gets the hash code for the current instance of <code>ScopeArmReferenceTriggerSource</code> . (Overrides ObjectGetHashCode .)
 GetType	Gets the <code>Type</code> of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of <code>ScopeArmReferenceTriggerSource</code> to <code>String</code> . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
	Equality	Checks whether two <code>ScopeArmReferenceTriggerSource</code> object instances are equal.
	(String to ScopeArmReferenceTriggerSource)	Converts a specified <code>String</code> to an equivalent <code>ScopeArmReferenceTriggerSource</code> object.
	(ScopeArmReferenceTriggerSource to String)	Converts a <code>ScopeArmReferenceTriggerSource</code> object to an equivalent <code>String</code> .
	Inequality	Checks whether two <code>ScopeArmReferenceTriggerSource</code> object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeArmReferenceTriggerSource Properties

The [ScopeArmReferenceTriggerSource](#) type exposes the following members.

Properties

	Name	Description
	Immediate	Gets the source terminal for Immediate.
	Pfi0	Gets the source terminal for PFI 0.
	Pfi1	Gets the source terminal for PFI 1.
	Pfi2	Gets the source terminal for PFI 2.
	PxiStar	Gets the source terminal for PXI STAR.
	Rtsi0	Gets the source terminal for RTSI 0.
	Rtsi1	Gets the source terminal for RTSI 1.
	Rtsi2	Gets the source terminal for RTSI 2.
	Rtsi3	Gets the source terminal for RTSI 3.
	Rtsi4	Gets the source terminal for RTSI 4.

 Rtsi5	Gets the source terminal for RTSI 5.
 Rtsi6	Gets the source terminal for RTSI 6.
 Rtsi7	Gets the source terminal for RTSI 7.
 SoftwareTriggerFunction	Gets the source terminal for the software trigger.

ScopeArmReferenceTriggerSourcePfi0 Property

Gets the source terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeArmReferenceTriggerSource Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeArmReferenceTriggerSource
    Get
```

Property Value

Type: [ScopeArmReferenceTriggerSource](#)

A [ScopeArmReferenceTriggerSource](#) representing the [String](#) "VAL_PFI_0".

ScopeArmReferenceTriggerSourcePfi1 Property

Gets the source terminal for PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeArmReferenceTriggerSource Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeArmReferenceTriggerSource  
    Get
```

Property Value

Type: [ScopeArmReferenceTriggerSource](#)

A [ScopeArmReferenceTriggerSource](#) representing the [String](#) "VAL_PFI_1".

ScopeArmReferenceTriggerSourcePfi2 Property

Gets the source terminal for PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeArmReferenceTriggerSource Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeArmReferenceTriggerSource  
    Get
```

Property Value

Type: [ScopeArmReferenceTriggerSource](#)

A [ScopeArmReferenceTriggerSource](#) representing the [String](#) "VAL_PFI_2".

ScopeArmReferenceTriggerSourcePxiStar Property

Gets the source terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeArmReferenceTriggerSource PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As ScopeArmReferenceTriggerSource
    Get
```

Property Value

Type: [ScopeArmReferenceTriggerSource](#)

A [ScopeArmReferenceTriggerSource](#) representing the [String](#) "VAL_PXI_STAR".

ScopeArmReferenceTriggerSource Methods

The [ScopeArmReferenceTriggerSource](#) type exposes the following members.

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeArmReferenceTriggerSource and the specified object are equal. (Overrides Object.Equals(Object) .)
	Equals(ScopeArmReferenceTriggerSource)	Determines whether the current instance of ScopeArmReferenceTriggerSource and the specified ScopeArmReferenceTriggerSource object are equal.

  FromString	Creates a ScopeArmReferenceTriggerSource object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeArmReferenceTriggerSource . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeArmReferenceTriggerSource to String . (Overrides ObjectToString .)

ScopeArmReferenceTriggerSourceEquals Method (Object)

Determines whether the current instance of [ScopeArmReferenceTriggerSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeArmReferenceTriggerSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeArmReferenceTriggerSourceEquals Method (Object)

Determines whether the current instance of [ScopeArmReferenceTriggerSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeArmReferenceTriggerSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeArmReferenceTriggerSourceFromString Method

Creates a [ScopeArmReferenceTriggerSource](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeArmReferenceTriggerSource FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeArmReferenceTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeArmReferenceTriggerSource](#) object returned represents.

Return Value

Type: [ScopeArmReferenceTriggerSource](#)

Returns an object of type [ScopeArmReferenceTriggerSource](#) representing the specified source [String](#).

See Also

ScopeArmReferenceTriggerSource.GetHashCode Method

Gets the hash code for the current instance of [ScopeArmReferenceTriggerSource](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeArmReferenceTriggerSource](#).

ScopeArmReferenceTriggerSource Operators and Type Conversions

The [ScopeArmReferenceTriggerSource](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeArmReferenceTriggerSource object instances are equal.
	(String to ScopeArmReferenceTriggerSource)	Converts a specified String to an equivalent ScopeArmReferenceTriggerSource object.
	(ScopeArmReferenceTriggerSource to String)	Converts a ScopeArmReferenceTriggerSource object to an equivalent String .
	Inequality	Checks whether two ScopeArmReferenceTriggerSource object instances are not equal.

ScopeArmReferenceTriggerSourceEquality Operator

Checks whether two [ScopeArmReferenceTriggerSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeArmReferenceTriggerSource source1,
    ScopeArmReferenceTriggerSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeArmReferenceTriggerSource,
    source2 As ScopeArmReferenceTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArmReferenceTriggerSource](#)

Specifies the first [ScopeArmReferenceTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArmReferenceTriggerSource](#)
 Specifies the second [ScopeArmReferenceTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeArmReferenceTriggerSourceEquality Operator

Checks whether two [ScopeArmReferenceTriggerSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public static bool operator ==(
    ScopeArmReferenceTriggerSource source1,
    ScopeArmReferenceTriggerSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeArmReferenceTriggerSource,
    source2 As ScopeArmReferenceTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArmReferenceTriggerSource](#)
Specifies the first [ScopeArmReferenceTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArmReferenceTriggerSource](#)
Specifies the second [ScopeArmReferenceTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeArmReferenceTriggerSource Conversion (String to ScopeArmReferenceTriggerSource)

Converts a specified [String](#) to an equivalent [ScopeArmReferenceTriggerSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeArmReferenceTriggerSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeArmReferenceTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeArmReferenceTriggerSource](#) object.

Return Value

Type: [ScopeArmReferenceTriggerSource](#)

Returns the [ScopeArmReferenceTriggerSource](#) object representing the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator string (  
    ScopeArmReferenceTriggerSource source  
)
```

```
Public Shared Widening Operator CType (
    source As ScopeArmReferenceTriggerSource
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArmReferenceTriggerSource](#)
 Specifies the [ScopeArmReferenceTriggerSource](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeArmReferenceTriggerSource](#) object.

ScopeArmReferenceTriggerSourceInequality Operator

Checks whether two [ScopeArmReferenceTriggerSource](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public static bool operator !=(
    ScopeArmReferenceTriggerSource source1,
    ScopeArmReferenceTriggerSource source2
)
```

```
Public Shared Operator <> (
    source1 As ScopeArmReferenceTriggerSource,
    source2 As ScopeArmReferenceTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArmReferenceTriggerSource](#)
Specifies the first [ScopeArmReferenceTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArmReferenceTriggerSource](#)
Specifies the second [ScopeArmReferenceTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeArrayMeasurementType Enumeration

Specifies various array measurements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeArrayMeasurementType
```

```
Public Enumeration ScopeArrayMeasurementType
```

Members

Member name	Value	Description
NoMeasurement	4000	No measurement is applied on the waveform.
LastAcquisitionHistogram	4001	The initialX value returned is the bin value for the first bin, corresponding to the midpoint of the range of values in the first bin. The xIncrement returned is the bin size.
FftPhaseSpectrum	4002	The phase spectrum is calculated using a split-radix real FFT. If the number of acquired points is not a power of two, zeros are padded at the end of the waveform so it is the next higher power of two. The phase spectrum is unwrapped.
FftAmplitudeSpectrumVoltsRms	4003	The amplitude spectrum is calculated using a split-radix real FFT. If the number of acquired points is not a power of two, zeros are padded at the end of the waveform so it is the next higher power of two.
MultipleAcquisitionVoltageHistogram	4004	The initialX value returned is the bin value for the first bin, corresponding to the midpoint of the range of values in the first bin. The xIncrement returned is the bin size.
MultipleAcquisitionTimeHistogram	4005	The initialX value returned is the bin value for the first bin, corresponding to the midpoint of the range of values in the first bin. The xIncrement returned is the bin size.
ArrayIntegral	4006	The waveform is integrated using Simpson's rule, fitting a parabola to every 3 points with the following equation:

		$y[2i+1] = (\text{waveform}[2i] + 4 * \text{waveform}[2i+1] + \text{waveform}[2i+2]) * dt / 3$
Derivative	4007	The differences in the waveform are computed using the formula: $y[i] = (\text{waveform}[i + 1] - \text{waveform}[i - 1]) / (2 * dt)$, where dt is the time between two points.
Inverse	4008	The inverse is computed using the following formula: $y[i] = 1.0 / \text{waveform}[i]$. If waveform[i] is zero, the inverse is zero.
HanningWindow	4009	A Hanning window is applied to the waveform using the following equation: $y[i] = 0.5 * \text{waveform}[i] * [1 - \cos(w)]$ where $w = (2)i/n$ and $n = \text{waveform size}$.
FlatTopWindow	4010	A Flat Top window is applied to the waveform using the following equation: $y[i] = \text{waveform}[i] * (0.2810639 - 0.5208972\cos(w) + 0.1980399\cos(2w))$ where $w = (2)i/n$ and n is the waveform size.
PolynomialInterpolation	4011	Polynomial interpolation allows oversampling or undersampling a waveform using any order polynomial set by PolynomialInterpolationOrder . For example, an order of 1 corresponds to linear interpolation. The new number of points is determined by the input size multiplied by InterpolationSamplingFactor . The sampling factor can be any number greater than 0.
MultiplyChannels	4012	Multiplies the waveforms from two channels, where one channel is specified by the parameter to FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble, ScopeWaveformInfo) , and the other channel is specified by OtherChannel . Any processing steps registered with AddWaveformProcessing(ScopeArrayMeasurementType) are completed for the "other channel" before this measurement is done. The two channels used in this measurement must be different.

AddChannels	4013	Adds the waveforms from two channels, where one channel is specified by the parameter to FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble, ScopeWaveformInfo) , and the other channel is specified by OtherChannel . Any processing steps registered with AddWaveformProcessing(ScopeArrayMeasurementType) are completed for the "other channel" before this measurement is done. The two channels used in this measurement must be different.
SubtractChannels	4014	Subtracts the waveforms from two channels, where one channel is specified by the parameter to FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble, ScopeWaveformInfo) , and the other channel is specified by OtherChannel . Any processing steps registered with AddWaveformProcessing(ScopeArrayMeasurementType) are completed for the "other channel" before this measurement is done. The two channels used in this measurement must be different.
DivideChannels	4015	Divides the waveforms from two channels, where one channel is specified by the parameter to FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble, ScopeWaveformInfo) and the other channel is specified by OtherChannel . Any processing steps registered with AddWaveformProcessing(ScopeArrayMeasurementType) are completed for the "other channel" before this measurement is done. The two channels used in this measurement must be different.
MultipleAcquisitionAverage	4016	The first time this measurement is called after it is cleared, an array the same size as the input is initialized to the input waveform, and the initialX and xIncrement values are set. Every subsequent call updates and returns the running average array without affecting the size of the array. The average array is cleared by calling ClearWaveformMeasurements with the measurement parameter set to MultipleAcquisitionAverage.

ButterworthFilter	4017	<p>The input waveform is filtered with a Butterworth IIR algorithm. The type of the filter is specified by <u>Type</u> as any of the following values: <u>LowPass</u>, <u>HighPass</u>, <u>BandPass</u>, or <u>BandStop</u>.</p> <p>The order of the filter is specified by <u>Order</u>. Also, a number of points equal to <u>TransientPercent</u> divided by 100 times the input size are eliminated from the beginning of the filtered waveform so the transient response of the filter does not affect further measurements.</p>
ChebyshevFilter	4018	<p>The input waveform is filtered with a Chebyshev IIR algorithm. The type of the filter is specified by <u>Type</u> as any of the following values: <u>LowPass</u>, <u>HighPass</u>, <u>BandPass</u>, or <u>BandStop</u>.</p> <p>The order of the filter is specified by <u>Order</u>. Also, a number of points equal to <u>TransientPercent</u> divided by 100 times the input size are eliminated from the beginning of the filtered waveform, so the transient response of the filter does not affect further measurements.</p>
FftAmplitudeSpectrumDB	4019	<p>The amplitude spectrum is calculated using a split-radix real FFT. If the number of acquired points is not a power of two, zeros are padded at the end of the waveform so it is the next higher power of two. The FFT is scaled to decibels:</p> $db[i] = 20.0 * \log_{10} (\text{Amplitude}[i] / \text{Peak Amplitude})$
HammingWindow	4020	<p>A Hamming window is applied to the waveform using the following equation:</p> $y[i] = x[i] [0.54 - 0.46\cos(w)]$ <p>where $w = (2 \pi) i/n$ and $n =$ the number of elements in x.</p>
WindowedFirFilter	4021	<p>FIR filters are well suited for applications that require phase information because the phase response is always linear. This prevents distortion of time-domain filtered data. The transient response of an FIR filter is a fixed number of points, filter taps - 1, which are eliminated in the filtered waveform returned.</p> <p>Windowed FIR filters use the cutoff frequency as part of the design process, but the cutoff is specified before the windowing operation. For Windowed FIR filters of</p>

		sufficient taps (more than 10 for a simple lowpass), the cutoff frequency has a magnitude near 0.5 (or 6 dB down). This varies slightly with the order and the window type.
BesselFilter	4022	The input waveform is filtered with a Bessel IIR algorithm. The type of the filter is specified by Type as any of the following values: LowPass , HighPass , BandPass , or BandStop . The order of the filter is specified by Order . Also, a number of points equal to TransientPercent divided by 100 times the input size are eliminated from the beginning of the filtered waveform so the transient response of the filter does not affect further measurements.
TriangleWindow	4023	A triangular window is applied to the waveform using the following equation: $y[i] = \text{waveform}[i] * (1 - w)$ where $w = (2i - n)/n$ and n is the number of elements in the waveform.
BlackmanWindow	4024	A Blackman window is applied to the waveform using the following equation: $y[i] = \text{waveform}[i] * (0.42659071 - 0.49656062\cos(w) + 0.07684867\cos(2w))$ where $w = (2i)/n$ and n is the number of elements in the waveform.
ArrayOffset	4025	The scalar value of ArrayOffset is added to every point in the waveform.
ArrayGain	4026	Every point in the waveform is multiplied by the scalar value ArrayGain .

ScopeCableSenseMode Enumeration

Specifies the CableSense signal type

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeCableSenseMode
```

```
Public Enumeration ScopeCableSenseMode
```

Members

Member name	Value	Description
Disabled	0	The CableSense Signal is disabled
OnDemand	1	The CableSense signal with turn on/off when the CableSense Signal Start/Stop methods are invoked

ScopeCalibration Class

Represents the ScopeCalibration sub-objects that contain properties and methods related to calibration.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeCalibration

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeCalibration : ScopeSubObject
```

```
Public NotInheritable Class ScopeCalibration
    Inherits ScopeSubObject
```

The ScopeCalibration type exposes the following members.

Properties

Name	Description
 External	Gets the ScopeExternalCalibration sub-object that provides properties and methods for external calibration.
 Self	Gets the ScopeSelfCalibration sub-object that provides properties and methods for self-calibration.
 Utility	Gets the ScopeCalibrationUtility sub-object that provides utility calibration methods.

Top

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance.

		(Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Calibration topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeCalibrationExternal Property

Gets the [ScopeExternalCalibration](#) sub-object that provides properties and methods for external calibration.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeExternalCalibration External { get; }
```

```
Public ReadOnly Property External As ScopeExternalCalibration  
    Get
```

Property Value

Type: [ScopeExternalCalibration](#)

An object of type [ScopeExternalCalibration](#).

Remarks

External calibration is not supported for NI-SCOPE. This sub-object exposes only a sub-set of external calibration properties. For more information, refer to [NI High-Speed Digitizers Help](#).

ScopeChannel Class

Represents a channel or a set of channels and the properties that you can set on a channel.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeChannel

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeChannel : ScopeSubObject,
    IIVI_ScopeChannel, IIVI_RepeatedCapabilityIdentification
```

```
Public NotInheritable Class ScopeChannel
    Inherits ScopeSubObject
    Implements IIVI_ScopeChannel, IIVI_RepeatedCapabilityIdentification
```

The ScopeChannel type exposes the following members.

Properties

Name	Description
 BandpassFilterEnabled	Gets or sets whether the bandpass filter is enabled on the specified channel.
 CableSenseMode	Gets or sets the CableSense Signal Mode
 CableSenseVoltage	Gets the CableSense signal voltage amplitude for the given channel
 Coupling	Gets or sets how the digitizer couples the input signal for the channel. When input coupling changes, the input stage takes a finite amount of time to settle.

 DigitalGain	Gets or sets the gain on the specified channel in hardware before any onboard signal processing occurs.
 DigitalOffset	Gets or sets the offset on the specified channel in hardware before any onboard signal processing occurs.
 DitherEnabled	Gets or sets whether dither is enabled on the channel.
 Enabled	Gets or sets whether the digitizer acquires a waveform for the channel.
 EnableInterleavingOffsetCorrection	Gets or sets a value specifying whether to enable the interleaving offset correction.
 EnableTimeInterleavedSampling	Gets or sets the instrument to use multiple ADCs to sample the same waveform at a higher effective real-time sample rate.
 FlexFirAntiAliasFilterType	Gets or sets the type of filter needed to achieve desired filtering characteristics.
 HighPassFilterFrequency	Gets or sets the frequency for the highpass filter in Hz.
 InputFrequencyMax	Gets or sets the bandwidth, in hertz, of the channel. Express this value as the frequency at which the input circuitry attenuates the input signal by 3 dB.
 InputImpedance	Gets or sets the input impedance, in ohms, for the channel.
 Measurement	Gets the ScopeChannelMeasurement sub-object that is related to configuring digitizers to obtain scalar and array measurements.
 Name	Gets the name of the channel.
 Offset	Gets or sets the location of the center of the range with respect to ground in volts.
 OnboardSignalProcessing	Gets the ScopeChannelOnboardSignalProcessing sub-object that is related to configuring the onboard signal processing (OSP) block of the high speed digitizer.
 ProbeAttenuation	Gets or sets the probe attenuation for the input channel. For example, for a 10:1 probe, set this property to 10.0.
 Range	Gets or sets the absolute value, in volts, of the input range for a channel. For example, to acquire a sine wave that spans between -5 and +5 V, set this property to 10.0 V.
 TerminalConfiguration	Gets or sets the terminal configuration for the channel.

[Top](#)

Methods

Name	Description
 Configure	Configures the most commonly-configured properties, such as the range, offset, coupling, probe attenuation, and the channel name of the digitizer vertical subsystem.
 ConfigureCharacteristics	Configures the properties that control the electrical characteristics of the channel.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetFrequencyResponse	Gets the frequency response of the digitizer for the current configurations of the channel attributes.
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetNormalizationCoefficients	Returns coefficients that can be used to convert binary data to normalized and calibrated data.
 GetScalingCoefficients	Returns an array of ScopeCoefficientInfo containing gain and offset coefficients for a given channel.
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string representation of the object. (Overrides ObjectToString .)

[Top](#)

Remarks

For more information, refer to the Attributes section of the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeChannel Properties

The [ScopeChannel](#) type exposes the following members.

Properties

Name	Description
 BandpassFilterEnabled	Gets or sets whether the bandpass filter is enabled on the specified channel.
 CableSenseMode	Gets or sets the CableSense Signal Mode
 CableSenseVoltage	Gets the CableSense signal voltage amplitude for the given channel
 Coupling	Gets or sets how the digitizer couples the input signal for the channel. When input coupling changes, the input stage takes a finite amount of time to settle.
 DigitalGain	Gets or sets the gain on the specified channel in hardware before any onboard signal processing occurs.
 DigitalOffset	Gets or sets the offset on the specified channel in hardware before any onboard signal processing occurs.
 DitherEnabled	Gets or sets whether dither is enabled on the channel.
 Enabled	Gets or sets whether the digitizer acquires a waveform for the channel.
 EnableInterleavingOffsetCorrection	Gets or sets a value specifying whether to enable the interleaving offset correction.

 EnableTimeInterleavedSampling	Gets or sets the instrument to use multiple ADCs to sample the same waveform at a higher effective real-time sample rate.
 FlexFirAntiAliasFilterType	Gets or sets the type of filter needed to achieve desired filtering characteristics.
 HighPassFilterFrequency	Gets or sets the frequency for the highpass filter in Hz.
 InputFrequencyMax	Gets or sets the bandwidth, in hertz, of the channel. Express this value as the frequency at which the input circuitry attenuates the input signal by 3 dB.
 InputImpedance	Gets or sets the input impedance, in ohms, for the channel.
 Measurement	Gets the ScopeChannelMeasurement sub-object that is related to configuring digitizers to obtain scalar and array measurements.
 Name	Gets the name of the channel.
 Offset	Gets or sets the location of the center of the range with respect to ground in volts.
 OnboardSignalProcessing	Gets the ScopeChannelOnboardSignalProcessing sub-object that is related to configuring the onboard signal processing (OSP) block of the high speed digitizer.
 ProbeAttenuation	Gets or sets the probe attenuation for the input channel. For example, for a 10:1 probe, set this property to 10.0.
 Range	Gets or sets the absolute value, in volts, of the input range for a channel. For example, to acquire a sine wave that spans between -5 and +5 V, set this property to 10.0 V.
 TerminalConfiguration	Gets or sets the terminal configuration for the channel.

ScopeChannelDigitalGain Property

Gets or sets the gain on the specified channel in hardware before any onboard signal processing occurs.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double DigitalGain { get; set; }
```

```
Public Property DigitalGain As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The gain can range from -1.5 to +1.5.

Remarks

If an overflow occurs, the data is clipped and the driver returns an error. To eliminate overflows, the digital gain should attenuate the ADC data, that is, ADC data should be set to a value less than 1.

The digital gain circuit can overflow if the following condition is not met:

$$-1 < \text{Unity Scaled User Data} \times \text{Pre-Filter Gain} < 1$$

You can also use Digital Gain to complete fine-gain adjustments on the ADC data to compensate for channel or system gain imperfections. These adjustments occur in hardware before the data is stored to memory. These adjustments save an additional processing step that normally occurs in software.

To change the default error reporting caused by OSP overflows, change the [OverflowErrorReportingMode](#) attribute.

Note

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI 5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

[ScopeChannelDigitalOffset](#)

[NationalInstruments.ModularInstruments.NIScopeScopeChannelDdc](#)

[ScopeChannelOnboardSignalProcessing](#)

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeChannelDigitalOffset Property

Gets or sets the offset on the specified channel in hardware before any onboard signal processing occurs.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax

C#VB

```
public double DigitalOffset { get; set; }
```

```
Public Property DigitalOffset As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The valid values range from $-(\text{Vertical Range} \times 0.4)$ to $+(\text{Vertical Range} \times 0.4)$. The default value is 0.

Remarks

The digital offset circuit can overflow if the following condition is not met:

```
-(Vertical Range/2) <= Channel Data + Digital Offset <= +Vertical Range/2.
```

If an overflow occurs, the data is clipped and the driver returns an error. To change the default error reporting caused by OSP overflows, change the [OverflowErrorReportingMode](#) property.

Note

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI PXI-5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

ScopeChannelDitherEnabled Property

Gets or sets whether dither is enabled on the channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool DitherEnabled { get; set; }
```

```
Public Property DitherEnabled As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

The default value is .

Remarks

Using dither can improve the spectral performance of the instrument by reducing the effects of quantization. However, adding dither increases the power level to the ADC, so you may need to either decrease the signal level or increase the vertical range.

ScopeChannelEnableInterleavingOffsetCorrection Property

Gets or sets a value specifying whether to enable the interleaving offset correction.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool EnableInterleavingOffsetCorrection { get; set; }
```

```
Public Property EnableInterleavingOffsetCorrection As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

, if interleaving offset correction is enabled; otherwise, . The default value is .

Exceptions

Exception	Condition
ObjectDisposedException	EnableInterleavingOffsetCorrection was called after the associated NIScope or ScopeDriverUtility object was disposed.
OperationNotSupportedException	On the instrument under use, EnableInterleavingOffsetCorrection is not supported.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Note

If disabled, warranted specifications are not guaranteed.

ScopeChannelEnableTimeInterleavedSampling Property

Gets or sets the instrument to use multiple ADCs to sample the same waveform at a higher effective real-time sample rate.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool EnableTimeInterleavedSampling { get; set; }
```

```
Public Property EnableTimeInterleavedSampling As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

The default value is false.

Remarks

This property is not supported by all instruments. For more information, refer to the [Features Supported by Device](#) topic in the [NI High-Speed Digitizers Help](#).

ScopeChannelFlexFirAntiAliasFilterType Property

Gets or sets the type of filter needed to achieve desired filtering characteristics.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeFlexFirAntiAliasFilterType FlexFirAntiAliasFilterType { get; set; }
```

```
Public Property FlexFirAntiAliasFilterType As ScopeFlexFirAntiAliasFilterType  
    Get  
    Set
```

Property Value

Type: [ScopeFlexFirAntiAliasFilterType](#)

Specifies the [ScopeFlexFirAntiAliasFilterType](#). The default value for this property is [Tap48Standard](#).

Remarks

The NI 5922 flexible-resolution digitizer uses an onboard FIR lowpass antialias filter. Use this property to select from several types of filters to achieve desired filtering characteristics. For most applications, the default value of this property is recommended. The other available filters are useful for optimizing settling time measurements of step responses.

Settling time values refer to the FIR filter only and do not take into account settling time caused by the analog front end. Refer to the NI PXI/PCI-5922 Specifications in the [NI High-Speed Digitizers Help](#) for combined digital and analog settling times.

ScopeChannelHighPassFilterFrequency Property

Gets or sets the frequency for the highpass filter in Hz.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double HighPassFilterFrequency { get; set; }
```

```
Public Property HighPassFilterFrequency As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The frequency for the highpass filter in Hz. The instrument uses one of the valid values listed in the remarks. If an invalid value is specified, no coercion occurs. The default value is 0.0.

Exceptions

Exception	Condition
ObjectDisposedException	HighPassFilterFrequency was called after the associated NIScope or ScopeDriverUtility object was disposed.
OperationNotSupportedException	On the instrument under use, HighPassFilterFrequency is not supported.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Valid values (PXIe-5164): 0.0, 90.0, 450.0

ScopeChannelName Property

Gets the name of the channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Name { get; }
```

```
Public ReadOnly Property Name As String
    Get
```

Property Value

Type: [String](#)

A string that represents the name of the channel.

Implements

[IIVIRepeatedCapabilityIdentificationName](#)

Exceptions

Exception	Condition
ObjectDisposedException	The object has been disposed.

ScopeChannelOnboardSignalProcessing Property

Gets the [ScopeChannelOnboardSignalProcessing](#) sub-object that is related to configuring the onboard signal processing (OSP) block of the high speed digitizer.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeChannelOnboardSignalProcessing OnboardSignalProcessing { get; }
```

```
Public ReadOnly Property OnboardSignalProcessing As  
ScopeChannelOnboardSignalProcessing  
Get
```

Property Value

Type: [ScopeChannelOnboardSignalProcessing](#)

An object of type [ScopeChannelOnboardSignalProcessing](#).

Remarks

This property is valid only with high-speed digitizers, such as the NI PXI-5142, that support onboard signal processing (OSP).

ScopeChannel Properties

The [ScopeChannel](#) type exposes the following members.

Properties

Name	Description
 BandpassFilterEnabled	Gets or sets whether the bandpass filter is enabled on the specified channel.
 CableSenseMode	Gets or sets the CableSense Signal Mode
 CableSenseVoltage	Gets the CableSense signal voltage amplitude for the given channel
 Coupling	Gets or sets how the digitizer couples the input signal for the channel. When input coupling changes, the input stage takes a finite amount of time to settle.
 DigitalGain	Gets or sets the gain on the specified channel in hardware before any onboard signal processing occurs.
 DigitalOffset	Gets or sets the offset on the specified channel in hardware before any onboard signal processing occurs.
 DitherEnabled	Gets or sets whether dither is enabled on the channel.

 Enabled	Gets or sets whether the digitizer acquires a waveform for the channel.
 EnableInterleavingOffsetCorrection	Gets or sets a value specifying whether to enable the interleaving offset correction.
 EnableTimeInterleavedSampling	Gets or sets the instrument to use multiple ADCs to sample the same waveform at a higher effective real-time sample rate.
 FlexFirAntiAliasFilterType	Gets or sets the type of filter needed to achieve desired filtering characteristics.
 HighPassFilterFrequency	Gets or sets the frequency for the highpass filter in Hz.
 InputFrequencyMax	Gets or sets the bandwidth, in hertz, of the channel. Express this value as the frequency at which the input circuitry attenuates the input signal by 3 dB.
 InputImpedance	Gets or sets the input impedance, in ohms, for the channel.
 Measurement	Gets the ScopeChannelMeasurement sub-object that is related to configuring digitizers to obtain scalar and array measurements.
 Name	Gets the name of the channel.
 Offset	Gets or sets the location of the center of the range with respect to ground in volts.
 OnboardSignalProcessing	Gets the ScopeChannelOnboardSignalProcessing sub-object that is related to configuring the onboard signal processing (OSP) block of the high speed digitizer.
 ProbeAttenuation	Gets or sets the probe attenuation for the input channel. For example, for a 10:1 probe, set this property to 10.0.
 Range	Gets or sets the absolute value, in volts, of the input range for a channel. For example, to acquire a sine wave that spans between -5 and +5 V, set this property to 10.0 V.
 TerminalConfiguration	Gets or sets the terminal configuration for the channel.

ScopeChannelDigitalGain Property

Gets or sets the gain on the specified channel in hardware before any onboard signal processing occurs.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public double DigitalGain { get; set; }
```

```
Public Property DigitalGain As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The gain can range from -1.5 to +1.5.

Remarks

If an overflow occurs, the data is clipped and the driver returns an error. To eliminate overflows, the digital gain should attenuate the ADC data, that is, ADC data should be set to a value less than 1.

The digital gain circuit can overflow if the following condition is not met:

```
-1 < Unity Scaled User Data × Pre-Filter Gain < 1
```

You can also use Digital Gain to complete fine-gain adjustments on the ADC data to compensate for channel or system gain imperfections. These adjustments occur in hardware before the data is stored to memory. These adjustments save an additional processing step that normally occurs in software.

To change the default error reporting caused by OSP overflows, change the [OverflowErrorReportingMode](#) attribute.

Note

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI 5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

ScopeChannelDigitalOffset Property

Gets or sets the offset on the specified channel in hardware before any onboard signal processing occurs.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax

C#VB

```
public double DigitalOffset { get; set; }
```

```
Public Property DigitalOffset As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The valid values range from $-(\text{Vertical Range} \times 0.4)$ to $+(\text{Vertical Range} \times 0.4)$. The default value is 0.

Remarks

The digital offset circuit can overflow if the following condition is not met:

```
-(Vertical Range/2) <= Channel Data + Digital Offset <= +Vertical Range/2.
```

If an overflow occurs, the data is clipped and the driver returns an error. To change the default error reporting caused by OSP overflows, change the [OverflowErrorReportingMode](#) property.

Note

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI PXI-5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

ScopeChannelDitherEnabled Property

Gets or sets whether dither is enabled on the channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool DitherEnabled { get; set; }
```

```
Public Property DitherEnabled As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

The default value is .

Remarks

Using dither can improve the spectral performance of the instrument by reducing the effects of quantization. However, adding dither increases the power level to the ADC, so you may need to either decrease the signal level or increase the vertical range.

ScopeChannelEnableInterleavingOffsetCorrection Property

Gets or sets a value specifying whether to enable the interleaving offset correction.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool EnableInterleavingOffsetCorrection { get; set; }
```

```
Public Property EnableInterleavingOffsetCorrection As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

, if interleaving offset correction is enabled; otherwise, . The default value is .

Exceptions

Exception	Condition
ObjectDisposedException	EnableInterleavingOffsetCorrection was called after the associated NIScope or ScopeDriverUtility object was disposed.
OperationNotSupportedException	On the instrument under use, EnableInterleavingOffsetCorrection is not supported.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Note

If disabled, warranted specifications are not guaranteed.

ScopeChannelEnableTimeInterleavedSampling Property

Gets or sets the instrument to use multiple ADCs to sample the same waveform at a higher effective real-time sample rate.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool EnableTimeInterleavedSampling { get; set; }
```

```
Public Property EnableTimeInterleavedSampling As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

The default value is false.

Remarks

This property is not supported by all instruments. For more information, refer to the Features Supported by Device topic in the [NI High-Speed Digitizers Help](#).

ScopeChannelFlexFirAntiAliasFilterType Property

Gets or sets the type of filter needed to achieve desired filtering characteristics.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeFlexFirAntiAliasFilterType FlexFirAntiAliasFilterType { get; set; }
```

```
Public Property FlexFirAntiAliasFilterType As ScopeFlexFirAntiAliasFilterType  
    Get  
    Set
```

Property Value

Type: [ScopeFlexFirAntiAliasFilterType](#)

Specifies the [ScopeFlexFirAntiAliasFilterType](#). The default value for this property is [Tap48Standard](#).

Remarks

The NI 5922 flexible-resolution digitizer uses an onboard FIR lowpass antialias filter. Use this property to select from several types of filters to achieve desired filtering characteristics. For most applications, the default value of this property is recommended. The other available filters are useful for optimizing settling time measurements of step responses.

Settling time values refer to the FIR filter only and do not take into account settling time caused by the analog front end. Refer to the NI PXI/PCI-5922 Specifications in the [NI High-Speed Digitizers Help](#) for combined digital and analog settling times.

ScopeChannelHighPassFilterFrequency Property

Gets or sets the frequency for the highpass filter in Hz.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double HighPassFilterFrequency { get; set; }
```

```
Public Property HighPassFilterFrequency As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The frequency for the highpass filter in Hz. The instrument uses one of the valid values listed in the remarks. If an invalid value is specified, no coercion occurs. The default value is 0.0.

Exceptions

Exception	Condition
-----------	-----------

ObjectDisposedException	HighPassFilterFrequency was called after the associated NIScope or ScopeDriverUtility object was disposed.
OperationNotSupportedException	On the instrument under use, HighPassFilterFrequency is not supported.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Valid values (PXIe-5164): 0.0, 90.0, 450.0

ScopeChannelOnboardSignalProcessing Property

Gets the [ScopeChannelOnboardSignalProcessing](#) sub-object that is related to configuring the onboard signal processing (OSP) block of the high speed digitizer.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeChannelOnboardSignalProcessing OnboardSignalProcessing { get; }
```

```
Public ReadOnly Property OnboardSignalProcessing As  
ScopeChannelOnboardSignalProcessing  
Get
```

Property Value

Type: [ScopeChannelOnboardSignalProcessing](#)

An object of type [ScopeChannelOnboardSignalProcessing](#).

Remarks

This property is valid only with high-speed digitizers, such as the NI PXI-5142, that support onboard signal processing (OSP).

ScopeChannel Methods

The [ScopeChannel](#) type exposes the following members.

Methods

Name	Description
 Configure	Configures the most commonly-configured properties, such as the range, offset, coupling, probe attenuation, and the channel name of the digitizer vertical subsystem.
 ConfigureCharacteristics	Configures the properties that control the electrical characteristics of the channel.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetFrequencyResponse	Gets the frequency response of the digitizer for the current configurations of the channel attributes.
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetNormalizationCoefficients	Returns coefficients that can be used to convert binary data to normalized and calibrated data.
 GetScalingCoefficients	Returns an array of ScopeCoefficientInfo containing gain and offset coefficients for a given channel.
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string representation of the object. (Overrides ObjectToString .)

ScopeChannelConfigure Method

Configures the most commonly-configured properties, such as the range, offset, coupling, probe attenuation, and the channel name of the digitizer vertical subsystem.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void Configure(  
    double verticalRange,  
    double verticalOffset,  
    ScopeVerticalCoupling verticalCoupling,  
    double probeAttenuation,  
    bool enabled  
)
```

```
Public Sub Configure (  
    verticalRange As Double,  
    verticalOffset As Double,  
    verticalCoupling As ScopeVerticalCoupling,  
    probeAttenuation As Double,  
    enabled As Boolean  
)
```

Parameters

verticalRange

Type: [SystemDouble](#)

The absolute value, in volts, of the input range for a channel. For example, to acquire a sine wave that spans between -5 and +5 V, set this property to 10.0 V.

verticalOffset

Type: [SystemDouble](#)

The location of the center of the range, in volts, with respect to ground.

verticalCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeVerticalCoupling](#)

The way the digitizer couples the input signal for the channel. When input coupling changes, the input stage takes a finite amount of time to settle.

probeAttenuation

Type: [SystemDouble](#)

The probe attenuation for the input channel. For example, for a 10:1 probe, set this property to 10.0.

enabled

Type: [SystemBoolean](#)

A value indicating whether the digitizer acquires a waveform for the channel.

See Also

ScopeChannelConfigure Method

Configures the most commonly-configured properties, such as the range, offset, coupling, probe attenuation, and the channel name of the digitizer vertical subsystem.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void Configure(
    double verticalRange,
    double verticalOffset,
    ScopeVerticalCoupling verticalCoupling,
    double probeAttenuation,
```

```

        bool enabled
    )

```

```

Public Sub Configure (
    verticalRange As Double,
    verticalOffset As Double,
    verticalCoupling As ScopeVerticalCoupling,
    probeAttenuation As Double,
    enabled As Boolean
)

```

Parameters

verticalRange

Type: [SystemDouble](#)

The absolute value, in volts, of the input range for a channel. For example, to acquire a sine wave that spans between -5 and +5 V, set this property to 10.0 V.

verticalOffset

Type: [SystemDouble](#)

The location of the center of the range, in volts, with respect to ground.

verticalCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeVerticalCoupling](#)

The way the digitizer couples the input signal for the channel. When input coupling changes, the input stage takes a finite amount of time to settle.

probeAttenuation

Type: [SystemDouble](#)

The probe attenuation for the input channel. For example, for a 10:1 probe, set this property to 10.0.

enabled

Type: [SystemBoolean](#)

A value indicating whether the digitizer acquires a waveform for the channel.

See Also

ScopeChannelConfigureCharacteristics Method

Configures the properties that control the electrical characteristics of the channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ConfigureCharacteristics(  
    double inputImpedance,  
    double inputFrequencyMax  
)
```

```
Public Sub ConfigureCharacteristics (  
    inputImpedance As Double,  
    inputFrequencyMax As Double  
)
```

Parameters

inputImpedance

Type: [SystemDouble](#)

Input impedance, in ohms, for the channel.

inputFrequencyMax

Type: [SystemDouble](#)

Bandwidth, in hertz, of the channel. Express this value as the frequency at which the input circuitry attenuates the input signal by 3 dB.

Implements

IIviScopeChannelConfigureCharacteristics(Double, Double)

See Also

Reference

ScopeChannelGetFrequencyResponse Method

Gets the frequency response of the digitizer for the current configurations of the channel attributes.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void GetFrequencyResponse(  
    out double[] frequencies,  
    out double[] amplitudes,  
    out double[] phases  
)
```

```
Public Sub GetFrequencyResponse (  
    <OutAttribute> ByRef frequencies As Double(),  
    <OutAttribute> ByRef amplitudes As Double(),  
    <OutAttribute> ByRef phases As Double()  
)
```

Parameters

frequencies

Type: [SystemDouble](#)

The frequencies that correspond with the amplitude and phase response of the instrument.

amplitudes

Type: [SystemDouble](#)

The magnitudes that correspond with the magnitude response of the instrument.

phases

Type: [SystemDouble](#)

The phases that correspond with the phase response of the instrument.

Remarks

You can use this method only with high-speed digitizers that support onboard signal processing (OSP).

ScopeChannelGetNormalizationCoefficients Method

Returns coefficients that can be used to convert binary data to normalized and calibrated data.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeCoefficientInfo[] GetNormalizationCoefficients()
```

```
Public Function GetNormalizationCoefficients As ScopeCoefficientInfo()
```

Return Value

Type: [ScopeCoefficientInfo](#)

The number of coefficient sets for this channel.

Remarks

Refer to the [Scaling and Normalization of Binary Data](#) for more information about how to use this method.

See Also

Reference

ScopeChannelGetScalingCoefficients Method

Returns an array of [ScopeCoefficientInfo](#) containing gain and offset coefficients for a given channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeCoefficientInfo[] GetScalingCoefficients()
```

```
Public Function GetScalingCoefficients As ScopeCoefficientInfo()
```

Return Value

Type: [ScopeCoefficientInfo](#)

The number of coefficient sets for this channel.

Remarks

Refer to the [Scaling and Normalization of Binary Data](#) for more information about how to use this method.

ScopeChannelToString Method

Returns a string representation of the object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override string ToString()
```

```
Public Overrides Function ToString As String
```

Return Value

Type: [String](#)

A string representation of the object.

Remarks

Overrides [ToString](#).

ScopeChannelCollection Class

Represents a strongly-typed collection of ScopeChannelCollection objects.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeChannelCollection

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeChannelCollection : ScopeSubObject,
    IIVI_ScopeChannelCollection,
    IIVI_RepeatedCapabilityCollection<IIVI_ScopeChannel>,
    IEnumerable<IIVI_ScopeChannel>,
    IEnumerable, IIVI_RepeatedCapabilityCollection<ScopeChannel>,
    IEnumerable<ScopeChannel>
```

```
Public NotInheritable Class ScopeChannelCollection
    Inherits ScopeSubObject
    Implements IIVI_ScopeChannelCollection,
    IIVI_RepeatedCapabilityCollection(Of IIVI_ScopeChannel),
    IEnumerable(Of IIVI_ScopeChannel), IEnumerable,
    IIVI_RepeatedCapabilityCollection(Of ScopeChannel),
    IEnumerable(Of ScopeChannel)
```

The `ScopeChannelCollection` type exposes the following members.

Properties

Name	Description
 Count	Gets the number of cached ScopeChannel objects in the collection, which is equal to the number of channels configured using a single-channel string (e.g., "0" or "1").
 Item	Gets a ScopeChannel object from the collection with the specified name. In Visual C#, this property is the indexer. <ul style="list-style-type: none"> ▪ If the channel name is a string specifying a list or range of channels (e.g., "0,1,2" or "0-6"), a new ScopeChannel is created and returned. The ScopeChannel created is not added to the collection. ▪ If the channel name corresponds to only one channel (e.g., "0" or "1") and if the channel has previously been accessed and cached in the collection, the corresponding ScopeChannel is returned; otherwise if the specified channel name exists on the instrument, a new ScopeChannel object is created, added to the collection, and returned.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetEnumerator	Returns an enumerator that iterates through the collection of single-channel ScopeChannel instances.
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Attributes section in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeChannelCollection Methods

The [ScopeChannelCollection](#) type exposes the following members.

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetEnumerator	Returns an enumerator that iterates through the collection of single-channel ScopeChannel instances.
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeChannelDdc Class

Defines the properties related to the digital down converter (DDC) block in a high speed digitizer.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeChannelDdc](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeChannelDdc : ScopeSubObject
```

```
Public NotInheritable Class ScopeChannelDdc
    Inherits ScopeSubObject
```

The ScopeChannelDdc type exposes the following members.

Properties

Name	Description
 CenterFrequency	Gets or sets the frequency, in hertz, at which the DDC block frequency translates the input data. This frequency is the region of the spectrum that you want to downconvert to baseband.
 Enabled	Gets or sets whether the digital down converter (DDC) block of the digitizer is enabled.
 FrequencyTranslationEnabled	Gets or sets whether the frequency translation of the data around the selected center frequency down to baseband is enabled.
 FrequencyTranslationPhaseI	Gets or sets the I oscillator phase in degrees at the first point acquired.
 FrequencyTranslationPhaseQ	Gets or sets the Q oscillator phase in degrees at the first point acquired.
 QSource	Gets or sets the channel that is the input to the Q data stream of the digital downconverter (DDC).

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

You can only query or set the properties of this class when the scope session is associated with an instrument that supports onboard signal processing (OSP). You can use the DDC block of the NI 5142 for the following applications:

- **Alias-Protected Decimation:** For alias-protected decimation applications, complete the following steps:
 1. Set `DDC Enabled` to `.`
 2. Set `DdcDataProcessingMode` to `Real`.
 3. Set `SampleRateMin` to the desired decimated sample rate.
 4. Set `FrequencyTranslationEnabled` to `.`

- **AM Demodulation:** For AM demodulation applications, complete the following steps:
 1. Set `DDC Enabled` to `.`
 2. Set `DdcDataProcessingMode` to `Real`.
 3. Set `SampleRateMin` to the desired baseband sample rate.
 4. Set `FrequencyTranslationEnabled` to `.`
 5. Set `CenterFrequency` to the carrier frequency of the AM signal you want to downconvert.

- **Quadrature Downconversion:** For quadrature downconversion applications, complete the following steps:
 1. Set `DDC Enabled` to `.`
 2. Set `DdcDataProcessingMode` to `Complex`.
 3. Set `SampleRateMin` to the desired IQ data rate.
 4. Set `FrequencyTranslationEnabled` to `.`
 5. Set `CenterFrequency` to the desired center frequency of the IF band you want to downconvert.

- Baseband Decimation: For baseband decimation applications, complete the following steps:
 1. Set DDC [Enabled](#) to .
 2. Set [DdcDataProcessingMode](#) to [Complex](#).
 3. Set [SampleRateMin](#) to the desired baseband sample rate.
 4. Set [FrequencyTranslationEnabled](#) to .
 5. Set [QSource](#) to channel "1."

To use the NI 5142 in normal digitizer mode, set [Enabled](#) to .

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeChannelDdcCenterFrequency Property

Gets or sets the frequency, in hertz, at which the DDC block frequency translates the input data. This frequency is the region of the spectrum that you want to downconvert to baseband.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double CenterFrequency { get; set; }
```

```
Public Property CenterFrequency As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The default value is 10 MHz. The valid value range is 0 to $(0.5 \times \text{SampleClockTimebaseRate})$ for digitizer).

Remarks

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI 5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, an exception is thrown.

ScopeChannelDdcQSource Property

Gets or sets the channel that is the input to the Q data stream of the digital downconverter (DDC).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string QSource { get; set; }
```

```
Public Property QSource As String  
    Get  
    Set
```

Property Value

Type: [String](#)

The default value is the channel that the property is registered to. All valid channels for the instrument are valid values.

Remarks

For multi-instrument sessions, the channel you define with this property as the Q data stream and the channel for the corresponding I data stream must both be located within the same physical instrument.

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the PXI/PCI-5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

```

```
Public Property FrequencyTranslationPhaseI As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The default value is 0. Valid values are -360 to 360, inclusive.

Remarks

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI 5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

ScopeChannelDdcFrequencyTranslationPhaseQ Property

Gets or sets the Q oscillator phase in degrees at the first point acquired.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double FrequencyTranslationPhaseQ { get; set; }
```

```
Public Property FrequencyTranslationPhaseQ As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The default value is 90. Valid values are -360 to 360, inclusive.

Remarks

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI 5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

ScopeChannelDdcQSource Property

Gets or sets the channel that is the input to the Q data stream of the digital downconverter (DDC).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string QSource { get; set; }
```

```
Public Property QSource As String  
    Get  
    Set
```

Property Value

Type: [String](#)

The default value is the channel that the property is registered to. All valid channels for the instrument are valid values.

Remarks

For multi-instrument sessions, the channel you define with this property as the Q data stream and the channel for the corresponding I data stream must both be located within the same physical instrument.

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the PXI/PCI-5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

ScopeChannelEqualizationFilter Class

Provides configuration options for the equalization filter. The equalization filter is designed to compensate the input signal for artifacts introduced to the signal outside of the digitizer.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeChannelEqualizationFilter

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeChannelEqualizationFilter : ScopeSubObject
```

```
Public NotInheritable Class ScopeChannelEqualizationFilter
    Inherits ScopeSubObject
```

The ScopeChannelEqualizationFilter type exposes the following members.

Properties

	Name	Description
	<u>Enabled</u>	Gets or sets whether the onboard signal processing equalization FIR block is enabled.
	<u>NumberOfCoefficients</u>	Gets the number of coefficients that the equalization FIR filter can accept.

Top

Methods

	Name	Description
	<u>ConfigureCoefficients</u>	Configures the custom coefficients for the equalization FIR filter on the instrument.

 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetCoefficients	Gets the custom coefficients for the equalization FIR filter on the instrument.
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

Ensure that you call [ConfigureCoefficients\(Double\)](#) with a double array whose size matches [NumberOfCoefficients](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeChannelEqualizationFilterConfigureCoefficients

Configures the custom coefficients for the equalization FIR filter on the instrument.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ConfigureCoefficients(  
    double[] coefficients  
)
```

```
Public Sub ConfigureCoefficients (  
    coefficients As Double()  
)
```

Parameters

coefficients

Type: [SystemDouble](#)

Pass the custom coefficients for the equalization FIR filter on the instrument.

These coefficients should be between +1 and -1. The length of the array is

[NumberOfCoefficients](#).

Remarks

If the equalization filter is [Enabled](#), ensure you call this method with a double array whose size matches [NumberOfCoefficients](#). Because this filter is a generic FIR filter, any coefficients within the range specified are valid.

ScopeChannelEqualizationFilterGetCoefficients Method

Gets the custom coefficients for the equalization FIR filter on the instrument.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double[] GetCoefficients()
```

```
Public Function GetCoefficients As Double()
```

Return Value

Type: [Double](#)

The custom coefficients for the equalization FIR filter on the instrument.

Exceptions

Exception	Condition
ObjectDisposedException	GetCoefficients was called after associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

This filter is designed to compensate the input signal for artifacts introduced to the signal outside of the digitizer. Because this filter is a generic FIR filter any coefficients are valid.

Coefficient values should be between +1 and -1.

ScopeChannelMeasurement Class

Represents the ScopeChannelMeasurement sub-objects that contain properties to allow you to configure the digitizers to obtain scalar and array measurements.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeChannelMeasurement

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeChannelMeasurement : ScopeSubObject,
    ISupportSynchronizationContext, IIVI_ScopeChannelMeasurement
```

```
Public NotInheritable Class ScopeChannelMeasurement
    Inherits ScopeSubObject
    Implements ISupportSynchronizationContext, IIVI_ScopeChannelMeasurement
```

The ScopeChannelMeasurement type exposes the following members.

Properties

Name	Description
 ArrayGain	Gets or sets a scalar value that is multiplied by every element of an array during the Array Gain measurement.
 ArrayOffset	Gets or sets a scalar value that is added to every element of an array during the Array Offset measurement.
 Filter	Gets measurement properties related to filtering.
 HysteresisPercent	Gets or sets the percentage of the full-scale vertical range for the hysteresis window size. Digital hysteresis is used in several scalar waveform measurements.
 InterpolationSamplingFactor	Gets or sets, indirectly, the new number of points for polynomial interpolation measurements. The new number of points is the input number of points times the sampling factor.
 LastHistogramSize	Gets or sets the number of bins in the last acquisition histogram. This histogram is used to determine several scalar measurements, such as voltage low and voltage high.
 OtherChannel	Gets or sets the second channel for two-channel measurements. If processing steps are registered with this channel, the processing is done before the waveform is used in a two-channel measurement.
 PolynomialInterpolationOrder	Gets or sets the polynomial order used for the polynomial interpolation measurement. For example, an order of 1 specifies linear interpolation whereas an order of 2 specifies parabolic interpolation. Any positive integer is valid.
 ReferenceLevel	Gets properties related to different reference levels.

 SynchronizeCallbacks	Specifies how events and callback delegates are invoked.
 TimeHistogram	Gets properties that are related to time histogram measurements.
 VoltageHistogram	Gets properties that are related to voltage histogram measurements.

[Top](#)

Methods

Name	Description
 AddWaveformProcessing	Adds one measurement to the list of processing steps that are completed before the measurement.
 BeginFetchArrayMeasurement	Asynchronously obtains a waveform from the digitizer and returns the specified measurement array. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 BeginFetchByte	Begins an asynchronous retrieval of data from a previously initiated acquisition.
 BeginFetchComplexDouble	Begins an asynchronous retrieval of data that the digitizer has acquired from a previously initiated acquisition.
 BeginFetchComplexInt16	Begins an asynchronous retrieval of data from single channels and records.
 BeginFetchDouble	Asynchronously returns the waveform from a previously initiated acquisition that the

	digitizer acquires for the specified channel. Refer to Using Fetch Functions for more information on using this method.
 BeginFetchInt16	Begins an asynchronous retrieval of data from a previously initiated acquisition.
 BeginFetchInt32	Begins an asynchronous retrieval of data from a previously initiated acquisition. Refer to Using Fetch Functions for more information on using this method.
 BeginFetchScalarMeasurement	Begins an asynchronous fetching of a waveform from the digitizer and performs the specified waveform measurement. Refer to Using Fetch Functions for more information.
 BeginFetchScalarMeasurementStatistics	Asynchronously obtains a waveform measurement and returns the measurement value. This method may return multiple statistical results depending on the number of channels, the acquisition type, and the number of records you specify.
 BeginRead	Asynchronously initiates an acquisition, waits for it to complete, and retrieves the data.
 BeginReadScalarMeasurement	Asynchronously initiates an acquisition, waits for it to complete, and performs the

	specified waveform measurement for a single channel and record or for multiple channels and records. Refer to Using Fetch Functions for more information.
ClearWaveformMeasurements	Clears the waveform statistics on the channel and for all measurements.
ClearWaveformMeasurements(ScopeArrayMeasurementType)	Clears the waveform statistics on the channel and for scalar measurements.
ClearWaveformMeasurements(ScopeScalarMeasurementType)	Clears the waveform statistics on the channel and for scalar measurements.
ClearWaveformProcessing	Clears the list of processing steps assigned to the given channel.
EndFetchArrayMeasurement(IAsyncResult)	Waits for a pending asynchronous fetch to complete.
EndFetchArrayMeasurement(IAsyncResult, ScopeWaveformInfo)	Waits for a pending asynchronous fetch to complete.
EndFetchByte(IAsyncResult)	Waits for a pending asynchronous fetch to complete.
EndFetchByte(IAsyncResult, ScopeWaveformInfo)	Waits for a pending asynchronous fetch to complete.
EndFetchComplexDouble(IAsyncResult)	Waits for a pending asynchronous fetch to complete.
EndFetchComplexDouble(IAsyncResult, ScopeWaveformInfo)	Waits for a pending asynchronous fetch to complete.

 <u>EndFetchComplexInt16(IAsyncResult)</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchComplexInt16(IAsyncResult, ScopeWaveformInfo)</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchDouble(IAsyncResult)</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchDouble(IAsyncResult, ScopeWaveformInfo)</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchInt16(IAsyncResult)</u>	Waits for pending asynchronous fetch to complete and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 <u>EndFetchInt16(IAsyncResult, ScopeWaveformInfo)</u>	Waits for pending asynchronous fetch to complete and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 <u>EndFetchInt32(IAsyncResult)</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchInt32(IAsyncResult, ScopeWaveformInfo)</u>	Waits for a pending asynchronous fetch to complete.

 <u>EndFetchScalarMeasurement</u>	<p>Waits for a pending asynchronous fetch to complete.</p>
 <u>EndFetchScalarMeasurementStatistics</u>	<p>Waits for a pending asynchronous fetch to complete.</p>
 <u>EndRead(IAsyncResult)</u>	<p>Waits for a pending asynchronous read to complete. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.</p>
 <u>EndRead(IAsyncResult, ScopeWaveformInfo)</u>	<p>Waits for a pending asynchronous read to complete. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.</p>
 <u>EndReadScalarMeasurement</u>	<p>Waits for a pending asynchronous read to complete.</p>
 <u>Equals</u>	<p>Determines whether the specified object is equal to the current object. (Inherited from <u>Object</u>.)</p>
 <u>FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble)</u>	<p>Obtains a waveform from the digitizer and returns the specified measurement array. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.</p>

<p> <u>FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble, ScopeWaveformInfo)</u></p>	<p>Obtains a waveform from the digitizer and returns the specified measurement array. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.</p>
<p> <u>FetchByte(PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte)</u></p>	<p>Retrieves data from a previously initiated acquisition and returns binary 8-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.</p>
<p> <u>FetchByte(PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte, ScopeWaveformInfo)</u></p>	<p>Retrieves data from a previously initiated acquisition and returns binary 8-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify. Refer to <u>Features Supported by Device</u> for more information on using this method.</p>
<p> <u>FetchComplexDouble(PrecisionTimeSpan, Int64, ComplexWaveformCollectionComplexDouble)</u></p>	<p>Retrieves data that the digitizer has acquired from a previously initiated acquisition and returns a one-dimensional array of complex, scaled waveforms.</p>
<p> <u>FetchComplexDouble(PrecisionTimeSpan, Int64, ComplexWaveformCollectionComplexDouble, ScopeWaveformInfo)</u></p>	<p>Retrieves data that the digitizer has acquired from a previously initiated</p>

	acquisition and returns a one-dimensional array of complex, scaled waveforms.
 <u>FetchComplexInt16(PrecisionTimeSpan, Int64, ComplexWaveformCollectionComplexInt16)</u>	Retrieves data from single channels and records. A one-dimensional array of complex binary 16-bit waveforms.
 <u>FetchComplexInt16(PrecisionTimeSpan, Int64, ComplexWaveformCollectionComplexInt16, ScopeWaveformInfo)</u>	Retrieves data from single channels and records. Returns a one-dimensional array of complex binary 16-bit waveforms.
 <u>FetchDouble(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble)</u>	Returns the waveform from a previously initiated acquisition that the digitizer acquires for the specified channel. This method returns scaled voltage waveforms. Refer to <u>Using Fetch Functions</u> for more information on using this method.
 <u>FetchDouble(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble, ScopeWaveformInfo)</u>	Returns the waveform from a previously initiated acquisition that the digitizer acquires for the specified channel. This method returns scaled voltage waveforms. Refer to <u>Using Fetch Functions</u> for more information on using this method.
 <u>FetchInt16(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16)</u>	Retrieves data from a previously initiated acquisition and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition

		type, and the number of records you specify.
⇒	<u>FetchInt16(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16, ScopeWaveformInfo)</u>	Retrieves data from a previously initiated acquisition and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
⇒	<u>FetchInt32(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt32)</u>	Retrieves data from a previously initiated acquisition. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
⇒	<u>FetchInt32(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt32, ScopeWaveformInfo)</u>	Retrieves data from a previously initiated acquisition. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
⇒	<u>FetchScalarMeasurement</u>	Fetches a waveform from the digitizer and performs the specified waveform measurement. Refer to <u>Using Fetch Functions</u> for more information.
⇒	<u>FetchScalarMeasurementStatistics</u>	Obtains a waveform measurement and returns the measurement value. This method may return multiple statistical results

	depending on the number of channels, the acquisition type, and the number of records you specify.
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 Read(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble)	Initiates an acquisition, waits for it to complete, and retrieves the data. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 Read(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble, ScopeWaveformInfo)	Initiates an acquisition, waits for it to complete, and retrieves the data. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 ReadScalarMeasurement	Initiates an acquisition, waits for it to complete, and performs the specified waveform measurement for a single channel and record or for multiple channels and records. Refer to Using Fetch Functions for more information.
 ToString	Returns a string that represents the current object.

(Inherited from [Object](#).)[Top](#)

Remarks

For more information, refer to Making Waveform Measurements in the [NI High-Speed Digitizers Help](#) or to the Scalar Measurements and Array Measurements topics in the [NI-SCOPE Function Reference Help](#).

ScopeChannelMeasurementArrayGain Property

Gets or sets a scalar value that is multiplied by every element of an array during the Array Gain measurement.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ArrayGain { get; set; }
```

```
Public Property ArrayGain As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The default value is 1.0.

ScopeChannelMeasurementArrayGain Property

Gets or sets a scalar value that is multiplied by every element of an array during the Array Gain measurement.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ArrayGain { get; set; }
```

```
Public Property ArrayGain As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The default value is 1.0.

ScopeChannelMeasurementArrayOffset Property

Gets or sets a scalar value that is added to every element of an array during the Array Offset measurement.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ArrayOffset { get; set; }
```

```
Public Property ArrayOffset As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The default value is 0.0.

ScopeChannelMeasurementFilter Property

Gets measurement properties related to filtering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeChannelMeasurementFilter Filter { get; }
```

```
Public ReadOnly Property Filter As ScopeChannelMeasurementFilter  
    Get
```

Property Value

Type: [ScopeChannelMeasurementFilter](#)

An object of type [ScopeChannelMeasurementFilter](#).

See Also

Reference

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeChannelMeasurementHysteresisPercent Property

Gets or sets the percentage of the full-scale vertical range for the hysteresis window size. Digital hysteresis is used in several scalar waveform measurements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double HysteresisPercent { get; set; }
```

```
Public Property HysteresisPercent As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The default value is 2%.

ScopeChannelMeasurementInterpolationSamplingFac

Gets or sets, indirectly, the new number of points for polynomial interpolation measurements. The new number of points is the input number of points times the sampling factor.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double InterpolationSamplingFactor { get; set; }
```

```
Public Property InterpolationSamplingFactor As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The default value is 2.0.

ScopeChannelMeasurementLastHistogramSize Property

Gets or sets the number of bins in the last acquisition histogram. This histogram is used to determine several scalar measurements, such as voltage low and voltage high.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public long LastHistogramSize { get; set; }
```

```
Public Property LastHistogramSize As Long  
    Get  
    Set
```

Property Value

Type: [Int64](#)

The default value is 256.

ScopeChannelMeasurementOtherChannel Property

Gets or sets the second channel for two-channel measurements. If processing steps are registered with this channel, the processing is done before the waveform is used in a two-channel measurement.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public string OtherChannel { get; set; }
```

```
Public Property OtherChannel As String
    Get
    Set
```

Property Value

Type: [String](#)

The default value is 0.

ScopeChannelMeasurementPolynomialInterpolationOrder

Gets or sets the polynomial order used for the polynomial interpolation measurement. For example, an order of 1 specifies linear interpolation whereas an order of 2 specifies parabolic interpolation. Any positive integer is valid.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long PolynomialInterpolationOrder { get; set; }
```

```
Public Property PolynomialInterpolationOrder As Long
    Get
    Set
```

Property Value

Type: [Int64](#)

The default value is 1.

ScopeChannelMeasurementReferenceLevel Property

Gets properties related to different reference levels.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeChannelMeasurementReferenceLevel ReferenceLevel { get; }
```

```
Public ReadOnly Property ReferenceLevel As ScopeChannelMeasurementReferenceLevel
    Get
```

Property Value

Type: [ScopeChannelMeasurementReferenceLevel](#)

An object of type [ScopeChannelMeasurementReferenceLevel](#).

See Also

ScopeChannelMeasurementSynchronizeCallbacks Property

Specifies how events and callback delegates are invoked.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool SynchronizeCallbacks { get; set; }
```

```
Public Property SynchronizeCallbacks As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

if the callbacks are synchronized; otherwise, . The default value is .

Implements

[ISupportSynchronizationContextSynchronizeCallbacks](#)

ScopeChannelMeasurementTimeHistogram Property

Gets properties that are related to time histogram measurements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeChannelMeasurementTimeHistogram TimeHistogram { get; }
```

```
Public ReadOnly Property TimeHistogram As ScopeChannelMeasurementTimeHistogram  
    Get
```

Property Value

Type: [ScopeChannelMeasurementTimeHistogram](#)

An object of type [ScopeChannelMeasurementTimeHistogram](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#/VB

```
public ScopeChannelMeasurementVoltageHistogram VoltageHistogram { get; }
```

```
Public ReadOnly Property VoltageHistogram As  
ScopeChannelMeasurementVoltageHistogram  
Get
```

Property Value

Type: [ScopeChannelMeasurementVoltageHistogram](#)

An object of type [ScopeChannelMeasurementVoltageHistogram](#).

ScopeChannelMeasurement Properties

The [ScopeChannelMeasurement](#) type exposes the following members.

Properties

Name	Description
 ArrayGain	Gets or sets a scalar value that is multiplied by every element of an array during the Array Gain measurement.
 ArrayOffset	Gets or sets a scalar value that is added to every element of an array during the Array Offset measurement.
 Filter	Gets measurement properties related to filtering.
 HysteresisPercent	Gets or sets the percentage of the full-scale vertical range for the hysteresis window size. Digital hysteresis is used in several scalar waveform measurements.
 InterpolationSamplingFactor	Gets or sets, indirectly, the new number of points for polynomial interpolation measurements. The new number of points is the input number of points times the sampling factor.
 LastHistogramSize	Gets or sets the number of bins in the last acquisition histogram. This histogram is used to determine several scalar measurements, such as voltage low and voltage high.
 OtherChannel	Gets or sets the second channel for two-channel measurements. If processing steps are registered with this channel, the processing is done before the waveform is used in a two-channel measurement.
 PolynomialInterpolationOrder	Gets or sets the polynomial order used for the polynomial interpolation measurement. For example, an order of 1 specifies linear interpolation whereas an order of 2 specifies parabolic interpolation. Any positive integer is valid.
 ReferenceLevel	Gets properties related to different reference levels.
 SynchronizeCallbacks	Specifies how events and callback delegates are invoked.
 TimeHistogram	Gets properties that are related to time histogram measurements.
 VoltageHistogram	Gets properties that are related to voltage histogram measurements.

ScopeChannelMeasurement Methods

The [ScopeChannelMeasurement](#) type exposes the following members.

Methods

Name	Description
 AddWaveformProcessing	Adds one measurement to the list of processing steps that are completed before the measurement.
 BeginFetchArrayMeasurement	Asynchronously obtains a waveform from the digitizer and returns the specified measurement array. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 BeginFetchByte	Begins an asynchronous retrieval of data from a previously initiated acquisition.
 BeginFetchComplexDouble	Begins an asynchronous retrieval of data that the digitizer has acquired from a previously initiated acquisition.
 BeginFetchComplexInt16	Begins an asynchronous retrieval of data from single channels and records.
 BeginFetchDouble	Asynchronously returns the waveform from a previously initiated acquisition that the digitizer acquires for the specified channel. Refer to Using Fetch Functions for more information on using this method.
 BeginFetchInt16	Begins an asynchronous retrieval of data from a

	previously initiated acquisition.
 BeginFetchInt32	Begins an asynchronous retrieval of data from a previously initiated acquisition. Refer to Using Fetch Functions for more information on using this method.
 BeginFetchScalarMeasurement	Begins an asynchronous fetching of a waveform from the digitizer and performs the specified waveform measurement. Refer to Using Fetch Functions for more information.
 BeginFetchScalarMeasurementStatistics	Asynchronously obtains a waveform measurement and returns the measurement value. This method may return multiple statistical results depending on the number of channels, the acquisition type, and the number of records you specify.
 BeginRead	Asynchronously initiates an acquisition, waits for it to complete, and retrieves the data.
 BeginReadScalarMeasurement	Asynchronously initiates an acquisition, waits for it to complete, and performs the specified waveform measurement for a single channel and record or for multiple channels and records. Refer to Using Fetch Functions for more information.

<u>⇒ <code>ClearWaveformMeasurements</code></u>	Clears the waveform statistics on the channel and for all measurements.
<u>⇒ <code>ClearWaveformMeasurements(ScopeArrayMeasurementType)</code></u>	Clears the waveform statistics on the channel and for scalar measurements.
<u>⇒ <code>ClearWaveformMeasurements(ScopeScalarMeasurementType)</code></u>	Clears the waveform statistics on the channel and for scalar measurements.
<u>⇒ <code>ClearWaveformProcessing</code></u>	Clears the list of processing steps assigned to the given channel.
<u>⇒ <code>EndFetchArrayMeasurement(IAsyncResult)</code></u>	Waits for a pending asynchronous fetch to complete.
<u>⇒ <code>EndFetchArrayMeasurement(IAsyncResult, ScopeWaveformInfo)</code></u>	Waits for a pending asynchronous fetch to complete.
<u>⇒ <code>EndFetchByte(IAsyncResult)</code></u>	Waits for a pending asynchronous fetch to complete.
<u>⇒ <code>EndFetchByte(IAsyncResult, ScopeWaveformInfo)</code></u>	Waits for a pending asynchronous fetch to complete.
<u>⇒ <code>EndFetchComplexDouble(IAsyncResult)</code></u>	Waits for a pending asynchronous fetch to complete.
<u>⇒ <code>EndFetchComplexDouble(IAsyncResult, ScopeWaveformInfo)</code></u>	Waits for a pending asynchronous fetch to complete.
<u>⇒ <code>EndFetchComplexInt16(IAsyncResult)</code></u>	Waits for a pending asynchronous fetch to complete.
<u>⇒ <code>EndFetchComplexInt16(IAsyncResult, ScopeWaveformInfo)</code></u>	Waits for a pending asynchronous fetch to complete.

 <u>EndFetchDouble(IAsyncResult)</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchDouble(IAsyncResult, ScopeWaveformInfo)</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchInt16(IAsyncResult)</u>	Waits for pending asynchronous fetch to complete and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 <u>EndFetchInt16(IAsyncResult, ScopeWaveformInfo)</u>	Waits for pending asynchronous fetch to complete and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 <u>EndFetchInt32(IAsyncResult)</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchInt32(IAsyncResult, ScopeWaveformInfo)</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchScalarMeasurement</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndFetchScalarMeasurementStatistics</u>	Waits for a pending asynchronous fetch to complete.
 <u>EndRead(IAsyncResult)</u>	Waits for a pending asynchronous read to

	complete. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 <u>EndRead(IAsyncResult, ScopeWaveformInfo)</u>	Waits for a pending asynchronous read to complete. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 <u>EndReadScalarMeasurement</u>	Waits for a pending asynchronous read to complete.
 <u>Equals</u>	Determines whether the specified object is equal to the current object. (Inherited from <u>Object.</u>)
 <u>FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble)</u>	Obtains a waveform from the digitizer and returns the specified measurement array. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 <u>FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble, ScopeWaveformInfo)</u>	Obtains a waveform from the digitizer and returns the specified measurement array. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

<p> <u>FetchByte(PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte)</u></p>	<p>Retrieves data from a previously initiated acquisition and returns binary 8-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.</p>
<p> <u>FetchByte(PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte, ScopeWaveformInfo)</u></p>	<p>Retrieves data from a previously initiated acquisition and returns binary 8-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify. Refer to <u>Features Supported by Device</u> for more information on using this method.</p>
<p> <u>FetchComplexDouble(PrecisionTimeSpan, Int64, ComplexWaveformCollectionComplexDouble)</u></p>	<p>Retrieves data that the digitizer has acquired from a previously initiated acquisition and returns a one-dimensional array of complex, scaled waveforms.</p>
<p> <u>FetchComplexDouble(PrecisionTimeSpan, Int64, ComplexWaveformCollectionComplexDouble, ScopeWaveformInfo)</u></p>	<p>Retrieves data that the digitizer has acquired from a previously initiated acquisition and returns a one-dimensional array of complex, scaled waveforms.</p>
<p> <u>FetchComplexInt16(PrecisionTimeSpan, Int64, ComplexWaveformCollectionComplexInt16)</u></p>	<p>Retrieves data from single channels and records. A one-dimensional array of complex binary 16-bit waveforms.</p>

<p>⇒ <u>FetchComplexInt16(PrecisionTimeSpan, Int64, ComplexWaveformCollectionComplexInt16, ScopeWaveformInfo)</u></p>	<p>Retrieves data from single channels and records. Returns a one-dimensional array of complex binary 16-bit waveforms.</p>
<p>⇒ <u>FetchDouble(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble)</u></p>	<p>Returns the waveform from a previously initiated acquisition that the digitizer acquires for the specified channel. This method returns scaled voltage waveforms. Refer to <u>Using Fetch Functions</u> for more information on using this method.</p>
<p>⇒ <u>FetchDouble(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble, ScopeWaveformInfo)</u></p>	<p>Returns the waveform from a previously initiated acquisition that the digitizer acquires for the specified channel. This method returns scaled voltage waveforms. Refer to <u>Using Fetch Functions</u> for more information on using this method.</p>
<p>⇒ <u>FetchInt16(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16)</u></p>	<p>Retrieves data from a previously initiated acquisition and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.</p>
<p>⇒ <u>FetchInt16(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16, ScopeWaveformInfo)</u></p>	<p>Retrieves data from a previously initiated acquisition and returns binary 16-bit waveforms. This method may return multiple waveforms</p>

	depending on the number of channels, the acquisition type, and the number of records you specify.
 FetchInt32(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt32)	Retrieves data from a previously initiated acquisition. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 FetchInt32(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt32, ScopeWaveformInfo)	Retrieves data from a previously initiated acquisition. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 FetchScalarMeasurement	Fetches a waveform from the digitizer and performs the specified waveform measurement. Refer to Using Fetch Functions for more information.
 FetchScalarMeasurementStatistics	Obtains a waveform measurement and returns the measurement value. This method may return multiple statistical results depending on the number of channels, the acquisition type, and the number of records you specify.
 GetHashCode	Serves as the default hash function. (Inherited from Object .)

☰	GetType	Gets the Type of the current instance. (Inherited from Object .)
☰	Read(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble)	Initiates an acquisition, waits for it to complete, and retrieves the data. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
☰	Read(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble, ScopeWaveformInfo)	Initiates an acquisition, waits for it to complete, and retrieves the data. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
☰	ReadScalarMeasurement	Initiates an acquisition, waits for it to complete, and performs the specified waveform measurement for a single channel and record or for multiple channels and records. Refer to Using Fetch Functions for more information.
☰	ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeChannelMeasurementAddWaveformProcessing

Adds one measurement to the list of processing steps that are completed before the measurement.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void AddWaveformProcessing(  
    ScopeArrayMeasurementType arrayMeasurementType  
)
```

```
Public Sub AddWaveformProcessing (  
    arrayMeasurementType As ScopeArrayMeasurementType  
)
```

Parameters

arrayMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArrayMeasurementType](#)
The array measurement to add.

Remarks

The processing is added on a per-channel basis, and the processing measurements are completed in the same order in which they are registered. The channel list considered is the channel associated with this measurement object. All measurement library properties (properties present in [ScopeChannelMeasurement](#) and its sub-objects) are cached at the time of registering the processing, and this set

of parameters is used during the processing step. The processing measurements are streamed, so the result of the first processing step is used as the input for the next step. The processing is done before any other measurements.

ScopeChannelMeasurementBeginFetchArrayMeasurement Method

Asynchronously obtains a waveform from the digitizer and returns the specified measurement array. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public IAsyncResult BeginFetchArrayMeasurement(
    PrecisionTimeSpan timeout,
    ScopeArrayMeasurementType arrayMeasurementType,
    AnalogWaveformCollection<double> waveforms,
    AsyncCallback callback,
    Object asyncState
)
```

```
Public Function BeginFetchArrayMeasurement (
    timeout As PrecisionTimeSpan,
    arrayMeasurementType As ScopeArrayMeasurementType,
    waveforms As AnalogWaveformCollection(Of Double),
    callback As AsyncCallback,
    asyncState As Object
) As IAsyncResult
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

arrayMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArrayMeasurementType](#)

The type of the array measurement to perform.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollectionDouble`

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set waveforms to `.` The method will also allocate memory during the call if waveforms is set to a waveform object with zero-sized data or waveforms is set to a waveform object with a different size than that required for the output waveform. For example, if waveforms is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output

waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

callback

Type: [SystemAsyncCallback](#)

A delegate of type [AsyncCallback](#), which will be invoked once the operation is complete.

asyncState

Type: [SystemObject](#)

The state of the asynchronous operation.

Return Value

Type: [IAsyncResult](#)

An [IAsyncResult](#) that represents the pending asynchronous fetch.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

ScopeChannelMeasurementBeginFetchByte Method

Begins an asynchronous retrieval of data from a previously initiated acquisition.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)
[VB](#)

```
public IAsyncResult BeginFetchByte(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    AnalogWaveformCollection<byte> waveforms,
    AsyncCallback callback,
    Object asyncState
)
```

```
Public Function BeginFetchByte (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As AnalogWaveformCollection(Of Byte),
    callback As AsyncCallback,
    asyncState As Object
) As IAsyncResult
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever data is currently available. Using `MaxValue` for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollection`[Byte](#)

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `.` The method will also allocate memory during the call if `waveforms` is set to a waveform object with zero-sized data or `waveforms` is set to a waveform

object with a different size than that required for the output waveform. For example, if waveforms is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

callback

Type: [SystemAsyncCallback](#)

A delegate of type [AsyncCallback](#), which will be invoked once the operation is complete.

asyncState

Type: [SystemObject](#)

The state of the asynchronous operation.

Return Value

Type: [IAsyncResult](#)

An [IAsyncResult](#) that represents the asynchronous fetch, which could still be pending.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

ScopeChannelMeasurementBeginFetchComplexDouble Method

Begins an asynchronous retrieval of data that the digitizer has acquired from a previously initiated acquisition.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public IAsyncResult BeginFetchComplexDouble(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    ComplexWaveformCollection<ComplexDouble> waveforms,
    AsyncCallback callback,
    Object asyncState
)
```

```
Public Function BeginFetchComplexDouble (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As ComplexWaveformCollection(Of ComplexDouble),
    callback As AsyncCallback,
    asyncState As Object
) As IAsyncResult
```

Parameters

timeout

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all

available samples. If it fails to complete within the timeout period, the method returns an error.

waveforms

Type: `NationalInstruments.ComplexWaveformCollection.ComplexDouble`
An array of type `ComplexWaveformCollection.TData`.

callback

Type: [SystemAsyncCallback](#)

A delegate of type [AsyncCallback](#), which will be invoked once the operation is complete.

asyncState

Type: [SystemObject](#)

The state of the asynchronous operation.

Return Value

Type: [IAsyncResult](#)

An [IAsyncResult](#) that represents the asynchronous fetch, which could still be pending.

Begins an asynchronous retrieval of data from single channels and records.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax

[C#](#)
[VB](#)

```
public IAsyncResult BeginFetchComplexInt16(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    ComplexWaveformCollection<ComplexInt16> waveforms,
    AsyncCallback callback,
    Object asyncState
)
```

```
Public Function BeginFetchComplexInt16 (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As ComplexWaveformCollection(Of ComplexInt16),
    callback As AsyncCallback,
    asyncState As Object
) As IAsyncResult
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method returns an error.

waveforms

Type: `NationalInstrumentsComplexWaveformCollectionComplexInt16`

An array of type `ComplexWaveformCollectionTData`.

callback

Type: [SystemAsyncCallback](#)

A delegate of type [AsyncCallback](#), which will be invoked once the operation is complete.

asyncState

Type: [SystemObject](#)

The state of the asynchronous operation.

Return Value

Type: [IAsyncResult](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public IAsyncResult BeginFetchInt32(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    AnalogWaveformCollection<int> waveforms,
    AsyncCallback callback,
    Object asyncState
)
```

```
Public Function BeginFetchInt32 (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As AnalogWaveformCollection(Of Integer),
    callback As AsyncCallback,
    asyncState As Object
) As IAsyncResult
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using `MaxValue` for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollectionInt32`

The waveform object whose memory can be reused while creating the output

waveform. To allocate memory during the call to this method, set waveforms to . The method will also allocate memory during the call if waveforms is set to a waveform object with zero-sized data or waveforms is set to a waveform object with a different size than that required for the output waveform. For example, if waveforms is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

Begins an asynchronous fetching of a waveform from the digitizer and performs the specified waveform measurement. Refer to [Using Fetch Functions](#) for more information.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public IAsyncResult BeginFetchScalarMeasurement(
    PrecisionTimeSpan timeout,
    ScopeScalarMeasurementType scalarMeasurementType,
    AsyncCallback callback,
    Object asyncState
)
```

```
Public Function BeginFetchScalarMeasurement (
    timeout As PrecisionTimeSpan,
    scalarMeasurementType As ScopeScalarMeasurementType,
    callback As AsyncCallback,
    asyncState As Object
) As IAsyncResult
```

Parameters

timeout

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

scalarMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeScalarMeasurementType](#)

The type of the scalar measurement to be performed.

callback

Type: [SystemAsyncCallback](#)

A delegate of type [AsyncCallback](#), which will be invoked once the operation is complete.

asyncState

Type: [SystemObject](#)

The state of the asynchronous operation.

ScopeChannelMeasurementBeginFetchScalarMeasurementStatistics
Method

Asynchronously obtains a waveform measurement and returns the measurement value. This method may return multiple statistical results depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public IAsyncResult BeginFetchScalarMeasurementStatistics(
    PrecisionTimeSpan timeout,
```

```

        ScopeScalarMeasurementType scalarMeasurementType,
        AsyncCallback callback,
        Object asyncState
    )

```

```

Public Function BeginFetchScalarMeasurementStatistics (
    timeout As PrecisionTimeSpan,
    scalarMeasurementType As ScopeScalarMeasurementType,
    callback As AsyncCallback,
    asyncState As Object
) As IAsyncResult

```

Parameters

timeout

Type: [NationalInstruments.PrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

scalarMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeScalarMeasurementType](#)

The type of the scalar measurement to be performed on each fetched waveform.

callback

Type: [SystemAsyncCallback](#)

A delegate of type [AsyncCallback](#), which will be invoked once the operation is complete.

asyncState

Type: [SystemObject](#)

The state of the asynchronous operation.

Return Value

Type: [IAsyncResult](#)

An [IAsyncResult](#) that represents the asynchronous fetch, which could still be pending.

ScopeChannelMeasurementBeginRead Method

Asynchronously initiates an acquisition, waits for it to complete, and retrieves the data.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public IAsyncResult BeginRead(  
    PrecisionTimeSpan timeout,  
    long numberOfSamples,  
    AnalogWaveformCollection<double> waveforms,  
    AsyncCallback callback,  
    Object asyncState  
)
```

```
Public Function BeginRead (  
    timeout As PrecisionTimeSpan,  
    numberOfSamples As Long,  
    waveforms As AnalogWaveformCollection(Of Double),  
    callback As AsyncCallback,  
    asyncState As Object  
) As IAsyncResult
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

numberOfSamples

Type: `SystemInt64`

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method returns an error.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollectionDouble`

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `.` The method will also allocate memory during the call if `waveforms` is set to a waveform object with zero-sized data or `waveforms` is set to a waveform object with a different size than that required for the output waveform. For example, if `waveforms` is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from `waveforms` will be reused for the output waveform.

callback

Type: `SystemAsyncCallback`

A delegate of type `AsyncCallback`, which will be invoked once the operation is complete.

asyncState

Type: `SystemObject`

The state of the asynchronous operation.

Return Value

Type: [IAsyncResult](#)

An [IAsyncResult](#) that represents the asynchronous read, which could still be pending.

Parameters

timeout

Type: [NationalInstruments.PrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

scalarMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeScalarMeasurementType](#)

The type of the scalar measurement to perform.

callback

Type: [System.AsyncCallback](#)

A delegate of type [AsyncCallback](#), which will be invoked once the operation is complete.

asyncState

Type: [System.Object](#)

The state of the asynchronous operation.

Return Value

Type: [IAsyncResult](#)

An [IAsyncResult](#) that represents the pending asynchronous read.

ScopeChannelMeasurementClearWaveformMeasurements Method

Overload List

Name	Description
 ClearWaveformMeasurements	Clears the waveform statistics on the channel and for all measurements.
 ClearWaveformMeasurements(ScopeArrayMeasurementType)	Clears the waveform statistics on the channel and for scalar measurements.
 ClearWaveformMeasurements(ScopeScalarMeasurementType)	Clears the waveform statistics on the channel and for scalar measurements.

ScopeChannelMeasurementClearWaveformMeasurements

Clears the waveform statistics on the channel and for all measurements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ClearWaveformMeasurements()
```

```
Public Sub ClearWaveformMeasurements
```

Remarks

Every time a measurement is called, the statistics information is updated, including the min, max, mean, standard deviation, and number of updates.

ScopeChannelMeasurementClearWaveformMeasurements Method
(ScopeArrayMeasurementType)

Clears the waveform statistics on the channel and for scalar measurements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ClearWaveformMeasurements (  
    ScopeArrayMeasurementType arrayMeasurementType  
)
```

```
Public Sub ClearWaveformMeasurements (  
    arrayMeasurementType As ScopeArrayMeasurementType  
)
```

Parameters

arrayMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArrayMeasurementType](#)

The array measurement to clear the statistics for.

ScopeChannelMeasurementClearWaveformMeasurements Method (ScopeScalarMeasurementType)

Clears the waveform statistics on the channel and for scalar measurements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ClearWaveformMeasurements (  
    ScopeScalarMeasurementType scalarMeasurementType  
)
```

```
Public Sub ClearWaveformMeasurements (  
    scalarMeasurementType As ScopeScalarMeasurementType  
)
```

Parameters

scalarMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeScalarMeasurementType](#)

The scalar measurement to clear the statistics for.

ScopeChannelMeasurementEndFetchInt16 Method (IAsyncResult)

Waits for pending asynchronous fetch to complete and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public AnalogWaveformCollection<short> EndFetchInt16(  
    IAsyncResult asyncResult  
)
```

```
Public Function EndFetchInt16 (  
    asyncResult As IAsyncResult  
) As AnalogWaveformCollection(Of Short)
```

Parameters

asyncResult

Type: [System.IAsyncResult](#)

An [IAsyncResult](#) that represents the asynchronous fetch, which could still be pending.

Return Value

Type: [AnalogWaveformCollectionInt16](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

    IAsyncResult asyncResult,  
    out ScopeWaveformInfo[] waveformInfo  
)
```

```
Public Function EndFetchInt16 (  
    asyncResult As IAsyncResult,  
    <OutAttribute> ByRef waveformInfo As ScopeWaveformInfo()  
) As AnalogWaveformCollection(Of Short)
```

Parameters

asyncResult

Type: [System.IAsyncResult](#)

An [IAsyncResult](#) that represents the asynchronous fetch, which could still be pending.

waveformInfo

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)

An array of [ScopeWaveformInfo](#) objects that contains timing and scaling information about each waveform.

Return Value

Type: [AnalogWaveformCollectionInt16](#)

An array of type [AnalogWaveformCollectionTData](#) and the length of the array is the number of samples times the number of waveforms. NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

ScopeChannelMeasurementEndFetchInt32 Method (IAsyncResult)

Waits for a pending asynchronous fetch to complete.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<int> EndFetchInt32(  
    IAsyncResult asyncResult  
)
```

```
Public Function EndFetchInt32 (  
    asyncResult As IAsyncResult  
) As AnalogWaveformCollection(Of Integer)
```

Parameters

asyncResult

Type: [System.IAsyncResult](#)

An [IAsyncResult](#) that represents the asynchronous fetch, which could still be pending.

Return Value

Type: [AnalogWaveformCollectionInt32](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values: index 0 = record 0, channel 0 index x

= record 0, channel 1 index 2x = record 1, channel 0 index 3x = record 1, channel 1
Where x = the record length

ScopeChannelMeasurementFetchArrayMeasurement)

Obtains a waveform from the digitizer and returns the specified measurement array. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<double> FetchArrayMeasurement(
    PrecisionTimeSpan timeout,
    ScopeArrayMeasurementType arrayMeasurementType,
    AnalogWaveformCollection<double> measurementWaveforms
)
```

```
Public Function FetchArrayMeasurement (
    timeout As PrecisionTimeSpan,
    arrayMeasurementType As ScopeArrayMeasurementType,
    measurementWaveforms As AnalogWaveformCollection(Of Double)
) As AnalogWaveformCollection(Of Double)
```

Parameters

timeout

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

arrayMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArrayMeasurementType](#)

The type of the array measurement to perform.

measurementWaveforms

Type: [NationalInstrumentsAnalogWaveformCollectionDouble](#)

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `measurementWaveforms` to `.` The method will also allocate memory during the call if `measurementWaveforms` is set to a waveform object with zero-sized data or `measurementWaveforms` is set to a waveform object with a different size than that required for the output waveform. For example, if

measurementWaveforms is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from measurementWaveforms will be reused for the output waveform.

Return Value

Type: [AnalogWaveformCollectionDouble](#)

An array of type [AnalogWaveformCollectionTData](#).

Exceptions

Exception	Condition
ObjectDisposedException	FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value of arrayMeasurementType was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

ScopeChannelMeasurementFetchArrayMeasurement Method
(PrecisionTimeSpan, ScopeArrayMeasurementType,
AnalogWaveformCollectionDouble, ScopeWaveformInfo)

Obtains a waveform from the digitizer and returns the specified measurement array. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<double> FetchArrayMeasurement(  
    PrecisionTimeSpan timeout,  
    ScopeArrayMeasurementType arrayMeasurementType,  
    AnalogWaveformCollection<double> measurementWaveforms,  
    out ScopeWaveformInfo[] waveformInfo  
)
```

```
Public Function FetchArrayMeasurement (  
    timeout As PrecisionTimeSpan,  
    arrayMeasurementType As ScopeArrayMeasurementType,  
    measurementWaveforms As AnalogWaveformCollection(Of Double),  
    <OutAttribute> ByRef waveformInfo As ScopeWaveformInfo()  
) As AnalogWaveformCollection(Of Double)
```

Parameters

timeout

Type: `NationalInstruments.PrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

arrayMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeArrayMeasurementType](#)

The type of the array measurement to perform.

measurementWaveforms

Type: `NationalInstruments.AnalogWaveformCollectionDouble`

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `measurementWaveforms` to `.` The method also allocates memory during the call if `measurementWaveforms` is set to a waveform object with zero-sized data or `waveformInfo` is set to a waveform object with a different size than that required for the output waveform. For example, `measurementWaveforms` is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from `measurementWaveforms` will be reused for the output waveform.

waveformInfo

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)

An array of [ScopeWaveformInfo](#) objects containing the timing and scaling information.

Return Value

Type: `AnalogWaveformCollectionDouble`

An array of type `AnalogWaveformCollectionTData`.

Exceptions

Exception	Condition
ObjectDisposedException	<code>FetchArrayMeasurement(PrecisionTimeSpan, ScopeArrayMeasurementType, AnalogWaveformCollectionDouble,</code>

	ScopeWaveformInfo) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The value of arrayMeasurementType was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

ScopeChannelMeasurementFetchByte Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte)

Retrieves data from a previously initiated acquisition and returns binary 8-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<byte> FetchByte(  
    PrecisionTimeSpan timeout,  
    long numberOfSamples,  
    AnalogWaveformCollection<byte> waveforms  
)
```

```
Public Function FetchByte (  
    timeout As PrecisionTimeSpan,  
    numberOfSamples As Long,  
    waveforms As AnalogWaveformCollection(Of Byte)  
) As AnalogWaveformCollection(Of Byte)
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using `MaxValue` for this parameter implies infinite timeout.

numberOfSamples

Type: `SystemInt64`

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollectionByte`

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `new AnalogWaveformCollectionByte()`. The method will also allocate memory during the call if `waveforms` is set to a waveform object with zero-sized data or `waveforms` is set to a waveform object with a different size than that required for the output waveform. For example, if `waveforms` is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from `waveforms` will be reused for the output waveform.

Return Value

Type: `AnalogWaveformCollectionByte`

An object of type `AnalogWaveformCollectionTData`.

`AnalogWaveformCollectionTData` returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index $2x$ = record 1, channel 0

index $3x$ = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `numberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	<code>FetchByte(PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte)</code> was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Using Fetch Functions](#) for more information.

ScopeChannelMeasurementFetchByte Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte)

Retrieves data from a previously initiated acquisition and returns binary 8-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<byte> FetchByte(  
    PrecisionTimeSpan timeout,  
    long numberOfSamples,  
    AnalogWaveformCollection<byte> waveforms  
)
```

```
Public Function FetchByte (  
    timeout As PrecisionTimeSpan,  
    numberOfSamples As Long,  
    waveforms As AnalogWaveformCollection(Of Byte)  
) As AnalogWaveformCollection(Of Byte)
```

Parameters

timeout

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using MaxValue for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0

was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollection`[Byte](#)

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `.` The method will also allocate memory during the call if `waveforms` is set to a waveform object with zero-sized data or `waveforms` is set to a waveform object with a different size than that required for the output waveform. For example, if `waveforms` is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from `waveforms` will be reused for the output waveform.

Return Value

Type: `AnalogWaveformCollection`[Byte](#)

An object of type `AnalogWaveformCollectionTData`.

`AnalogWaveformCollectionTData` returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `.`, then the waveforms returned will contain twice the number of samples specified by `numberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to , then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	FetchByte(PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Using Fetch Functions](#) for more information.

This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify. Refer to [Features Supported by Device](#) for more information on using this method.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<byte> FetchByte(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    AnalogWaveformCollection<byte> waveforms,
    out ScopeWaveformInfo[] waveformInfo
)
```

```
Public Function FetchByte (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As AnalogWaveformCollection(Of Byte),
    <OutAttribute> ByRef waveformInfo As ScopeWaveformInfo()
) As AnalogWaveformCollection(Of Byte)
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever data is currently available. Using `MaxValue` for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollection`[Byte](#)

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `.` The method will also allocate memory during the call if `waveforms` is set

to a waveform object with zero-sized data or waveforms is set to a waveform object with a different size than that required for the output waveform. For example, if waveforms is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

waveformInfo

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)

An array of [ScopeWaveformInfo](#) objects that contains timing and scaling information about each waveform.

Return Value

Type: [AnalogWaveformCollectionByte](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

Return Value

Type: [AnalogWaveformCollectionByte](#)

An array of [ScopeWaveformInfo](#) objects that contains timing and scaling information about each waveform.

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `numberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	FetchByte(PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte, ScopeWaveformInfo) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Using Fetch Functions](#) for more information.

ScopeChannelMeasurementFetchComplexDouble Me)

Retrieves data that the digitizer has acquired from a previously initiated acquisition and returns a one-dimensional array of complex, scaled waveforms.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ComplexWaveformCollection<ComplexDouble> FetchComplexDouble (
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    ComplexWaveformCollection<ComplexDouble> waveforms
)
```

```
Public Function FetchComplexDouble (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As ComplexWaveformCollection(Of ComplexDouble)
) As ComplexWaveformCollection(Of ComplexDouble)
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

numberOfSamples

Type: `SystemInt64`

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method returns an error.

waveforms

Type: `NationalInstrumentsComplexWaveformCollectionComplexDouble`

An array of type `ComplexWaveformCollectionTData`.

Return Value

Type: `ComplexWaveformCollectionComplexDouble`

An array of type `ComplexWaveformCollectionTData`

Exceptions

Exception	Condition
ObjectDisposedException	<code>FetchComplexDouble(PrecisionTimeSpan, Int64, ComplexWaveformCollectionComplexDouble)</code> was called after the associated NIScope or ScopeDriverUtility object was disposed.
<code>IviCDriverException</code>	<p>The channel specified is not enabled.</p> <p>- or -</p> <p>The session is not configured to fetch complex measurements.</p> <p>- or -</p> <p>The underlying NI-SCOPE driver returned an error.</p>

Return Value

Type: [AnalogWaveformCollectionDouble](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `NumberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	<code>FetchDouble(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble, ScopeWaveformInfo)</code> was called after the associated NIScope or ScopeDriverUtility object was disposed.
<code>IviDriverException</code>	The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

ScopeChannelMeasurementFetchInt16 Method

Overload List

Name	Description
------	-------------

 FetchInt16(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16)	Retrieves data from a previously initiated acquisition and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.
 FetchInt16(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16, ScopeWaveformInfo)	Retrieves data from a previously initiated acquisition and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

ScopeChannelMeasurementFetchInt16 Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16)

Retrieves data from a previously initiated acquisition and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public AnalogWaveformCollection<short> FetchInt16(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    AnalogWaveformCollection<short> waveforms
)
```

```
Public Function FetchInt16 (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As AnalogWaveformCollection(Of Short)
) As AnalogWaveformCollection(Of Short)
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using `MaxValue` for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollectionInt16`

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `.` The method will also allocate memory during the call if `waveforms` is set to a waveform object with zero-sized data or `waveforms` is set to a waveform object with a different size than that required for the output waveform. For example, if `waveforms` is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output

waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

Return Value

Type: [AnalogWaveformCollectionInt16](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `0`, then the waveforms returned will contain twice the number of samples specified by `NumberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `1`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	FetchInt16(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

Refer to [Using Fetch Functions](#) for more information on using this method.

ScopeChannelMeasurementFetchInt16 Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16)

Retrieves data from a previously initiated acquisition and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<short> FetchInt16(  
    PrecisionTimeSpan timeout,  
    long numberOfSamples,  
    AnalogWaveformCollection<short> waveforms  
)
```

```
Public Function FetchInt16 (  
    timeout As PrecisionTimeSpan,  
    numberOfSamples As Long,  
    waveforms As AnalogWaveformCollection(Of Short)  
) As AnalogWaveformCollection(Of Short)
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using `MaxValue` for this parameter implies infinite timeout.

numberOfSamples

Type: `SystemInt64`

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollectionInt16`

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `new AnalogWaveformCollectionInt16()`. The method will also allocate memory during the call if `waveforms` is set to a waveform object with zero-sized data or `waveforms` is set to a waveform object with a different size than that required for the output waveform. For example, if `waveforms` is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from `waveforms` will be reused for the output waveform.

Return Value

Type: `AnalogWaveformCollectionInt16`

An object of type `AnalogWaveformCollectionTData`. NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index $2x$ = record 1, channel 0
 index $3x$ = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `numberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	FetchInt16 (PrecisionTimeSpan , Int64 , AnalogWaveformCollectionInt16) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

Refer to [Using Fetch Functions](#) for more information on using this method.

ScopeChannelMeasurementFetchInt16 Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16, ScopeWaveformInfo)

Retrieves data from a previously initiated acquisition and returns binary 16-bit waveforms. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<short> FetchInt16(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    AnalogWaveformCollection<short> waveforms,
    out ScopeWaveformInfo[] waveformInfo
)
```

```
Public Function FetchInt16 (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As AnalogWaveformCollection(Of Short),
    <OutAttribute> ByRef waveformInfo As ScopeWaveformInfo()
) As AnalogWaveformCollection(Of Short)
```

Parameters

timeout

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using MaxValue for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the

acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: [NationalInstrumentsAnalogWaveformCollectionInt16](#)

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set waveforms to . The method will also allocate memory during the call if waveforms is set to a waveform object with zero-sized data or waveforms is set to a waveform object with a different size than that required for the output waveform. For example, if waveforms is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

waveformInfo

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)

An array of [ScopeWaveformInfo](#) objects that contains timing and scaling information about each waveform.

Return Value

Type: [AnalogWaveformCollectionInt16](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `numberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

ScopeChannelMeasurementFetchInt32 Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt32)

Retrieves data from a previously initiated acquisition. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

[Syntax](#)[C#VB](#)

```
public AnalogWaveformCollection<int> FetchInt32 (
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    AnalogWaveformCollection<int> waveforms
)
```

```
Public Function FetchInt32 (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As AnalogWaveformCollection(Of Integer)
) As AnalogWaveformCollection(Of Integer)
```

Parameters

timeout

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using `MaxValue` for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use `-1` for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: [NationalInstrumentsAnalogWaveformCollectionInt32](#)

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `.` The method will also allocate memory during the call if `waveforms` is set to a waveform object with zero-sized data or `waveforms` is set to a waveform object with a different size than that required for the output waveform. For example, if `waveforms` is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output

waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

Return Value

Type: [AnalogWaveformCollectionInt32](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `0`, then the waveforms returned will contain twice the number of samples specified by `NumberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `1`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	FetchInt32(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt32) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

ScopeChannelMeasurementFetchInt32 Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt32)

Retrieves data from a previously initiated acquisition. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<int> FetchInt32(  
    PrecisionTimeSpan timeout,  
    long numberOfSamples,  
    AnalogWaveformCollection<int> waveforms  
)
```

```
Public Function FetchInt32 (  
    timeout As PrecisionTimeSpan,  
    numberOfSamples As Long,  
    waveforms As AnalogWaveformCollection(Of Integer)  
) As AnalogWaveformCollection(Of Integer)
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using `MaxValue` for this parameter implies infinite timeout.

numberOfSamples

Type: `SystemInt64`

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollectionInt32`

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `new AnalogWaveformCollectionInt32()`. The method will also allocate memory during the call if `waveforms` is set to a waveform object with zero-sized data or `waveforms` is set to a waveform object with a different size than that required for the output waveform. For example, if `waveforms` is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from `waveforms` will be reused for the output waveform.

Return Value

Type: `AnalogWaveformCollectionInt32`

An object of type `AnalogWaveformCollectionTData`. NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index $2x$ = record 1, channel 0

index $3x$ = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `numberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	FetchInt32 (PrecisionTimeSpan , Int64 , AnalogWaveformCollectionInt32) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

ScopeChannelMeasurementFetchInt32 Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt32, ScopeWaveformInfo)

Retrieves data from a previously initiated acquisition. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<int> FetchInt32(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    AnalogWaveformCollection<int> waveforms,
    out ScopeWaveformInfo[] waveformInfo
)
```

```
Public Function FetchInt32 (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As AnalogWaveformCollection(Of Integer),
    <OutAttribute> ByRef waveformInfo As ScopeWaveformInfo()
) As AnalogWaveformCollection(Of Integer)
```

Parameters

timeout

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using MaxValue for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the

acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method throws an exception.

waveforms

Type: [NationalInstrumentsAnalogWaveformCollectionInt32](#)

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set waveforms to . The method will also allocate memory during the call if waveforms is set to a waveform object with zero-sized data or waveforms is set to a waveform object with a different size than that required for the output waveform. For example, if waveforms is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

waveformInfo

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)

An array of [ScopeWaveformInfo](#) objects that contains timing and scaling information about each waveform.

Return Value

Type: [AnalogWaveformCollectionInt32](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

Return Value

Type: [AnalogWaveformCollectionInt32](#)

An array of [ScopeWaveformInfo](#) objects that contain timing and scaling information about each waveform

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `NumberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	FetchInt32 (PrecisionTimeSpan , Int64 , AnalogWaveformCollectionInt32 , ScopeWaveformInfo) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Some functionality, such as time stamping, is not supported in all digitizers. Refer to [Features Supported by Device](#) for more information.

ScopeChannelMeasurementFetchScalarMeasurement Method

Fetches a waveform from the digitizer and performs the specified waveform measurement. Refer to [Using Fetch Functions](#) for more information.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double[] FetchScalarMeasurement (
    PrecisionTimeSpan timeout,
    ScopeScalarMeasurementType scalarMeasurementType
)
```

```
Public Function FetchScalarMeasurement (
    timeout As PrecisionTimeSpan,
    scalarMeasurementType As ScopeScalarMeasurementType
) As Double()
```

Parameters

timeout

Type: [NationalInstruments.PrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

scalarMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScope.ScopeScalarMeasurementType](#)

The type of the scalar measurement to be performed.

Return Value

Type: [Double](#)

An array of all measurements acquired.

ScopeChannelMeasurementFetchScalarMeasurementStatistics Method

Obtains a waveform measurement and returns the measurement value. This method may return multiple statistical results depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeScalarMeasurementStatistics[] FetchScalarMeasurementStatistics (
    PrecisionTimeSpan timeout,
    ScopeScalarMeasurementType scalarMeasurementType
)
```

```
Public Function FetchScalarMeasurementStatistics (
    timeout As PrecisionTimeSpan,
    scalarMeasurementType As ScopeScalarMeasurementType
) As ScopeScalarMeasurementStatistics()
```

Parameters

timeout

Type: NationalInstrumentsPrecisionTimeSpan

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

scalarMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeScalarMeasurementType](#)

The type of the scalar measurement to be performed on each fetched waveform.

Return Value

Type: [ScopeScalarMeasurementStatistics](#)

An array of type [ScopeScalarMeasurementStatistics](#).

ScopeChannelMeasurementRead Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble)

Initiates an acquisition, waits for it to complete, and retrieves the data. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<double> Read(  
    PrecisionTimeSpan timeout,  
    long numberOfSamples,  
    AnalogWaveformCollection<double> waveforms  
)
```

```
Public Function Read (  
    timeout As PrecisionTimeSpan,  
    numberOfSamples As Long,  
    waveforms As AnalogWaveformCollection(Of Double)  
) As AnalogWaveformCollection(Of Double)
```

Parameters

timeout

Type: NationalInstrumentsPrecisionTimeSpan

The time to wait for data to be acquired. Using 0 for this parameter tells NI-

SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method returns an error.

waveforms

Type: [NationalInstrumentsAnalogWaveformCollectionDouble](#)

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set waveforms to . The method will also allocate memory during the call if waveforms is set to a waveform object with zero-sized data or waveforms is set to a waveform object with a different size than that required for the output waveform. For example, if waveforms is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

Return Value

Type: [AnalogWaveformCollectionTData](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

 Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `numberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	<code>Read(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble)</code> was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

`ScopeChannelMeasurementRead` Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble)

Initiates an acquisition, waits for it to complete, and retrieves the data. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<double> Read(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    AnalogWaveformCollection<double> waveforms
)
```

```
Public Function Read (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As AnalogWaveformCollection(Of Double)
) As AnalogWaveformCollection(Of Double)
```

Parameters

timeout

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

numberOfSamples

Type: [SystemInt64](#)

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method returns an error.

waveforms

Type: [NationalInstrumentsAnalogWaveformCollectionDouble](#)

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set waveforms to . The method will also allocate memory during the call if waveforms is set to a waveform object with zero-sized data or waveforms is set to a waveform

object with a different size than that required for the output waveform. For example, if waveforms is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from waveforms will be reused for the output waveform.

Return Value

Type: [AnalogWaveformCollectionDouble](#)

An object of type [AnalogWaveformCollectionTData](#). NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0

index x = record 0, channel 1

index 2x = record 1, channel 0

index 3x = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `NumberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	<code>Read(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble)</code> was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The underlying NI-SCOPE driver returned an error.

ScopeChannelMeasurementRead Method (PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble, ScopeWaveformInfo)

Initiates an acquisition, waits for it to complete, and retrieves the data. This method may return multiple waveforms depending on the number of channels, the acquisition type, and the number of records you specify.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public AnalogWaveformCollection<double> Read(
    PrecisionTimeSpan timeout,
    long numberOfSamples,
    AnalogWaveformCollection<double> waveforms,
    out ScopeWaveformInfo[] waveformInfo
)
```

```
Public Function Read (
    timeout As PrecisionTimeSpan,
    numberOfSamples As Long,
    waveforms As AnalogWaveformCollection(Of Double),
    <OutAttribute> ByRef waveformInfo As ScopeWaveformInfo()
) As AnalogWaveformCollection(Of Double)
```

Parameters

timeout

Type: `NationalInstrumentsPrecisionTimeSpan`

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

numberOfSamples

Type: `SystemInt64`

The maximum number of samples to fetch for each waveform. If the acquisition finishes with fewer points than requested, some instruments return partial data if the acquisition finished, was aborted, or a timeout of 0 was used. Use -1 for this parameter if you want to fetch all available samples. The method reads the actual record length and attempts to acquire all available samples. If it fails to complete within the timeout period, the method returns an error.

waveforms

Type: `NationalInstrumentsAnalogWaveformCollectionDouble`

The waveform object whose memory can be reused while creating the output waveform. To allocate memory during the call to this method, set `waveforms` to `.` The method will also allocate memory during the call if `waveforms` is set to a waveform object with zero-sized data or `waveforms` is set to a waveform object with a different size than that required for the output waveform. For example, if `waveforms` is set to a waveform object with the same size as that required for this method call, then no new memory is allocated for the output waveform, and instead the memory of the waveform object from `waveforms` will be reused for the output waveform.

waveformInfo

Type: `NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo`

An array of `ScopeWaveformInfo` objects.

Return Value

Type: `AnalogWaveformCollectionDouble`

An object of type `AnalogWaveformCollectionTData`. NI-SCOPE returns this data sequentially, so all record 0 waveforms are first. For example, with a channel list of 0,1, you would have the following index values:

index 0 = record 0, channel 0
 index x = record 0, channel 1
 index 2x = record 1, channel 0
 index 3x = record 1, channel 1

Where x = the record length

Note

If you are using this entry point or any of its overloads or async versions to read complex data, then you will either receive double the number of samples or double the number of records requested depending on the value of [FetchInterleavedIQData](#).

If [FetchInterleavedIQData](#) is set to `True`, then the waveforms returned will contain twice the number of samples specified by `NumberOfSamples`. Every two samples represents interleaved IQ data.

If [FetchInterleavedIQData](#) is set to `False`, then the waveform collection returned will contain twice the number of records requested. Each pair of records represents one waveform of I data, and one waveform of Q data.

Exceptions

Exception	Condition
ObjectDisposedException	<code>Read(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble, ScopeWaveformInfo)</code> was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The underlying NI-SCOPE driver returned an error.

ScopeChannelMeasurementReadScalarMeasurement Method

Initiates an acquisition, waits for it to complete, and performs the specified waveform measurement for a single channel and record or for multiple channels and records. Refer to [Using Fetch Functions](#) for more information.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double[] ReadScalarMeasurement(  
    PrecisionTimeSpan timeout,  
    ScopeScalarMeasurementType scalarMeasurementType  
)
```

```
Public Function ReadScalarMeasurement (  
    timeout As PrecisionTimeSpan,  
    scalarMeasurementType As ScopeScalarMeasurementType  
) As Double()
```

Parameters

timeout

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The time to wait for data to be acquired. Using 0 for this parameter tells NI-SCOPE to fetch whatever is currently available. Using -1 for this parameter implies infinite timeout.

scalarMeasurementType

Type: [NationalInstruments.ModularInstruments.NIScopeScopeScalarMeasurementType](#)

The type of the scalar measurement to be performed.

Return Value

Type: [Double](#)

An array of all measurements acquired.

ScopeChannelMeasurementFilter Class

Represents the [ScopeChannelMeasurement](#) sub-objects that contain properties related to filtering.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeChannelMeasurementFilter](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeChannelMeasurementFilter : ScopeSubObject
```

```
Public NotInheritable Class ScopeChannelMeasurementFilter
    Inherits ScopeSubObject
```

The `ScopeChannelMeasurementFilter` type exposes the following members.

Properties

Name	Description
------	-------------

 CenterFrequency	Gets or sets the center frequency, in hertz, for bandpass and bandstop filters. The width of the filter is specified by Width , where the cutoff frequencies are the center width.
 CutoffFrequency	Gets or sets the cutoff frequency, in hertz, for lowpass and highpass filters. The cutoff frequency definition varies depending on the filter.
 FirFilterWindow	Gets or sets the FIR window type. The symmetric windows are applied to the FIR filter coefficients to limit passband ripple in FIR filters.
 Order	Gets or sets the order of an IIR filter. All positive integers are valid.
 Ripple	Gets or sets the amount of passband ripple, in decibels (positive values), for Chebyshev filters.
 Taps	Gets or sets the number of taps (coefficients) for a FIR filter.
 TransientPercent	Gets or sets the percentage (0 - 100%) of the IIR filtered waveform to eliminate from the beginning of the waveform. This process eliminates the transient portion of the waveform that is undefined due to the assumptions necessary at the boundary condition.
 Type	Gets or sets the type of filter, for both IIR and FIR filters.
 Width	Gets or sets the width of bandpass and bandstop type filters in hertz. The cutoff frequencies occur at CenterFrequency \pm one-half width.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Digital Filtering and Filter Measurements topics in the [NI High-Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeChannelMeasurementFilterOrder Property

Gets or sets the order of an IIR filter. All positive integers are valid.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long Order { get; set; }
```

```
Public Property Order As Long  
    Get  
    Set
```

Property Value

Type: [Int64](#)

The default value is 2.

ScopeChannelMeasurementFilterRipple Property

Gets or sets the amount of passband ripple, in decibels (positive values), for Chebyshev filters.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double Ripple { get; set; }
```

```
Public Property Ripple As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The default value is 0.1 dB.

ScopeChannelMeasurementFilterTaps Property

Gets or sets the number of taps (coefficients) for a FIR filter.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long Taps { get; set; }
```

```
Public Property Taps As Long  
    Get  
    Set
```

Property Value

Type: [Int64](#)

The default value is 25.

ScopeChannelMeasurementFilterTransientPercent Property

Gets or sets the percentage (0 - 100%) of the IIR filtered waveform to eliminate from the beginning of the waveform. This process eliminates the transient portion of the waveform that is undefined due to the assumptions necessary at the boundary condition.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double TransientPercent { get; set; }
```

```
Public Property TransientPercent As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The default value is 20.0%.

ScopeChannelMeasurementFilterType Property

Gets or sets the type of filter, for both IIR and FIR filters.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeMeasurementFilterType Type { get; set; }
```

```
Public Property Type As ScopeMeasurementFilterType
    Get
    Set
```

Property Value

Type: [ScopeMeasurementFilterType](#)

Specifies the [ScopeMeasurementFilterType](#). The default value is [LowPass](#).

ScopeChannelMeasurementFilterWidth Property

Gets or sets the width of bandpass and bandstop type filters in hertz. The cutoff frequencies occur at [CenterFrequency](#) ±one-half width.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double Width { get; set; }
```

```
Public Property Width As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The default value is 1.0e3 Hz.

ScopeChannelMeasurementFilter Methods

The [ScopeChannelMeasurementFilter](#) type exposes the following members.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeChannelMeasurementReferenceLevel Class

Represents the [ScopeChannelMeasurement](#) sub-objects that contain properties related to reference levels.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeChannelMeasurementReferenceLevel](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public sealed class ScopeChannelMeasurementReferenceLevel : ScopeSubObject
```

```
Public NotInheritable Class ScopeChannelMeasurementReferenceLevel  
    Inherits ScopeSubObject
```

The `ScopeChannelMeasurementReferenceLevel` type exposes the following members.

Properties

Name	Description
 High	Gets or sets the high reference level used in many scalar measurements.
 Low	Gets or sets the low reference level used in many scalar measurements.
 Mid	Gets or sets the mid reference level used in many scalar measurements.
 PercentageMethod	Gets or sets the mode used to map percentage reference units to voltages for the reference, when Units is set to Percentage .
 Units	Gets or sets the units for the waveform measurement reference levels. You can use this property to specify whether you are providing the actual threshold voltage values or percentage values.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)

ScopeChannelMeasurementTimeHistogramHighTime Property

Gets or sets the highest time value, in seconds, included in the multiple-acquisition time histogram.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan HighTime { get; set; }
```

```
Public Property HighTime As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

The default value is 5.0e-4 seconds.

ScopeChannelMeasurementTimeHistogramLowTime Property

Gets or sets the lowest time value, in seconds, included in the multiple-acquisition time histogram.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan LowTime { get; set; }
```

```
Public Property LowTime As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

The default value is $-5.0e-4$ seconds.

ScopeChannelOnboardSignalProcessing Class

Provides methods and properties for configuring the Onboard Signal Processing (OSP) components of high speed digitizers.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeChannelOnboardSignalProcessing

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeChannelOnboardSignalProcessing : ScopeSubObject
```

```
Public NotInheritable Class ScopeChannelOnboardSignalProcessing
    Inherits ScopeSubObject
```

The ScopeChannelOnboardSignalProcessing type exposes the following members.

Properties

Name	Description
 Ddc	Gets the ScopeChannelDdc sub-object that is related to configuring the digital downconverter (DDC) block of the high-speed digitizer.
 EqualizationFilter	Gets the ScopeChannelEqualizationFilter sub-object that is related to configuring the Equalization Filter onboard the high-speed digitizer.

Top

Methods

Name	Description
------	-------------

 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

This property can be used only with high-speed digitizers that support onboard signal processing (OSP). `ModularInstrumentsException` is thrown when this property is accessed or any of the sub-properties are set or accessed on an instrument that does not provide OSP. The main components of the Onboard Signal Processing block include the following:

- Digital Down-Converter - [ScopeChannelDdc](#)
The DDC takes a programmable portion of the Nyquist_Theorem spectrum of the ADC and moves it down to baseband (centered around 0 Hz). This process is performed by first frequency translating the center of the band of interest to 0 Hz. The data is then filtered and decimated to get alias-protected data of the requested bandwidth. The data output from the DDC is stored into memory at this lower sample rate as complex IQ pairs.
- Filtering And Decimation - [ScopeChannelEqualizationFilter](#)
The filtering and decimation stage of the OSP block reduces the effective sample rate of the digitizer while protecting the frequency spectrum of the decimated data from aliases. This protection occurs when the data passes through a lowpass filter before decimation. The normal decimation in digitizers (when not using OSP) does not protect the frequency spectrum of the decimated data from aliases.
- Digital Gain - [DigitalGain](#)
Digital gain can be used to change the gain of each channel. You can program the digital gain of each channel independently using the [DigitalGain](#). The gain

can range from -1.5 to $+1.5$ (unitless). You can use the digital gain to attenuate the channel data to eliminate overflows in the OSP block.

- Digital Offset - [DigitalOffset](#)

The digital offset can be used to change the offset of each channel. You can program the digital offset of each channel independently using the [DigitalOffset](#).

- Frequency Translation - [FrequencyTranslationEnabled](#)

Frequency translation moves the Nyquist Theorem frequency spectrum of the acquired signal by the amount specified by the [CenterFrequency](#). This is accomplished by multiplying the acquired data stream with the output of the numerically controlled oscillator (NCO). The NCO is a digital circuit that creates two sine waves of the same frequency (the Center Frequency) with two independent phases. You can use the CenterFrequency to set the carrier frequency. The I phase cosine waveform is multiplied by the I signal path, and the Q phase cosine waveform is multiplied by the Q data path. The I and Q phases are programmable from 0° to 360° by setting the [FrequencyTranslationPhaseI](#) and [FrequencyTranslationPhaseQ](#) properties. Both the frequency and the phases can be updated during acquisition. The NCO outputs start at the specified phase values when the start trigger is received.

- Data Processing Mode - [ScopeDdcDataProcessingMode](#)

The Data Processing Mode Selection stage selects between [Real](#) and [Complex](#) processing. In Real mode, only the Real I data is returned when a waveform fetch is executed. In Complex mode, the I and Q data streams are interleaved before they are stored to memory. When the complex data is fetched, the data is returned as interleaved I and Q data. The data can be fetched as an array of complex IQ samples, as an array of interleaved real I and Q samples, or as separate arrays of real I and Q samples.

Note

Additional properties are available for instruments that support OSP. You access these properties, [DdcDataProcessingMode](#) and [OverflowErrorReportingMode](#), from the [ScopeAcquisition](#) class. [DdcDataProcessingMode](#) and [OverflowErrorReportingMode](#) are not channel specific.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeClockSynchronizationPulseSource and the specified object are equal.

		(Overrides ObjectEquals(Object).)
	Equals(ScopeClockSynchronizationPulseSource)	Determines whether the current instance of <code>ScopeClockSynchronizationPulseSource</code> and the specified <code>ScopeClockSynchronizationPulseSource</code> object are equal.
 	FromString	Creates a <code>ScopeClockSynchronizationPulseSource</code> object from the specified String .
	GetHashCode	Gets the hash code for the current instance of <code>ScopeClockSynchronizationPulseSource</code> . (Overrides ObjectGetHashCode.)
	GetType	Gets the Type of the current instance. (Inherited from Object.)
	ToString	Converts the current instance of <code>ScopeClockSynchronizationPulseSource</code> to String . (Overrides ObjectToString.)

[Top](#)

Operators

	Name	Description
 	Equality	Checks whether two <code>ScopeClockSynchronizationPulseSource</code> object instances are equal.
 	(String to ScopeClockSynchronizationPulseSource)	Converts a specified String to an equivalent <code>ScopeClockSynchronizationPulseSource</code> object.
 	(ScopeClockSynchronizationPulseSource to String)	Converts a <code>ScopeClockSynchronizationPulseSource</code> object to an equivalent String .
 	Inequality	Checks whether two <code>ScopeClockSynchronizationPulseSource</code> object instances are not equal.

[Top](#)

Remarks

This line should be the same for all devices to be synchronized. For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeClockSynchronizationPulseSource Properties

The [ScopeClockSynchronizationPulseSource](#) type exposes the following members.

Properties

	Name	Description
	NoSource	Gets the source terminal for no source.
	Pfi0	Gets the source terminal for PFI 0.
	Pfi1	Gets the source terminal for PFI 1.
	Pfi2	Gets the source terminal for PFI 2.
	Rtsi0	Gets the source terminal for RTSI 0.
	Rtsi1	Gets the source terminal for RTSI 1.
	Rtsi2	Gets the source terminal for RTSI 2.
	Rtsi3	Gets the source terminal for RTSI 3.
	Rtsi4	Gets the source terminal for RTSI 4.
	Rtsi5	Gets the source terminal for RTSI 5.

 Rtsi6	Gets the source terminal for RTSI 6.
 Rtsi7	Gets the source terminal for RTSI 7.

ScopeClockSynchronizationPulseSource Methods

The [ScopeClockSynchronizationPulseSource](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeClockSynchronizationPulseSource and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeClockSynchronizationPulseSource)	Determines whether the current instance of ScopeClockSynchronizationPulseSource and the specified ScopeClockSynchronizationPulseSource object are equal.
 FromString 	Creates a ScopeClockSynchronizationPulseSource object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeClockSynchronizationPulseSource . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeClockSynchronizationPulseSource to String . (Overrides ObjectToString .)

ScopeClockSynchronizationPulseSourceEquals Meth

Determines whether the current instance of [ScopeClockSynchronizationPulseSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeClockSynchronizationPulseSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeClockSynchronizationPulseSourceEquals Method (Object)

Determines whether the current instance of [ScopeClockSynchronizationPulseSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeClockSynchronizationPulseSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeClockSynchronizationPulseSourceEquals Method (ScopeClockSynchronizationPulseSource)

Determines whether the current instance of [ScopeClockSynchronizationPulseSource](#) and the specified [ScopeClockSynchronizationPulseSource](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeClockSynchronizationPulseSource source  
)
```

```
Public Function Equals (  
    source As ScopeClockSynchronizationPulseSource  
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeClockSynchronizationPulseSource](#)
Specifies the [ScopeClockSynchronizationPulseSource](#) object to compare to the current instance of [ScopeClockSynchronizationPulseSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeClockSynchronizationPulseSourceFromString Method

Creates a [ScopeClockSynchronizationPulseSource](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeClockSynchronizationPulseSource FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeClockSynchronizationPulseSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeClockSynchronizationPulseSource](#) object returned represents.

Return Value

Type: [ScopeClockSynchronizationPulseSource](#)

Returns an object of type [ScopeClockSynchronizationPulseSource](#) representing the specified source [String](#).

See Also

ScopeClockSynchronizationPulseSourceGetHashCode Method

Gets the hash code for the current instance of [ScopeClockSynchronizationPulseSource](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeClockSynchronizationPulseSource](#).

See Also

Reference

ScopeClockSynchronizationPulseSourceToString Method

Converts the current instance of [ScopeClockSynchronizationPulseSource](#) to [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public override string ToString()
```

```
Public Overrides Function ToString As String
```

Return Value

Type: [String](#)

Returns a [String](#) representing the current instance of [ScopeClockSynchronizationPulseSource](#).

ScopeClockSynchronizationPulseSource Operators and Type Conversions

The [ScopeClockSynchronizationPulseSource](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeClockSynchronizationPulseSource object instances are equal.
	(String to ScopeClockSynchronizationPulseSource)	Converts a specified String to an equivalent ScopeClockSynchronizationPulseSource object.
	(ScopeClockSynchronizationPulseSource to String)	Converts a ScopeClockSynchronizationPulseSource object to an equivalent String .
	Inequality	Checks whether two ScopeClockSynchronizationPulseSource object instances are not equal.

ScopeClockSynchronizationPulseSourceEquality Operator

Checks whether two [ScopeClockSynchronizationPulseSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeClockSynchronizationPulseSource source1,
    ScopeClockSynchronizationPulseSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeClockSynchronizationPulseSource,
    source2 As ScopeClockSynchronizationPulseSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeClockSynchronizationPulseSource](#)
 Specifies the first [ScopeClockSynchronizationPulseSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeClockSynchronizationPulseSource](#)
 Specifies the second [ScopeClockSynchronizationPulseSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeClockSynchronizationPulseSource source1,
    ScopeClockSynchronizationPulseSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeClockSynchronizationPulseSource,
    source2 As ScopeClockSynchronizationPulseSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeClockSynchronizationPulseSource](#)
Specifies the first [ScopeClockSynchronizationPulseSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeClockSynchronizationPulseSource](#)
Specifies the second [ScopeClockSynchronizationPulseSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Converts a specified [String](#) to an equivalent [ScopeClockSynchronizationPulseSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeClockSynchronizationPulseSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeClockSynchronizationPulseSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeClockSynchronizationPulseSource](#) object.

Return Value

Type: [ScopeClockSynchronizationPulseSource](#)

Returns the [ScopeClockSynchronizationPulseSource](#) object representing the specified [String](#).

Checks whether two [ScopeClockSynchronizationPulseSource](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public static bool operator !=(  
    ScopeClockSynchronizationPulseSource source1,  
    ScopeClockSynchronizationPulseSource source2  
)
```

```
Public Shared Operator <> (  
    source1 As ScopeClockSynchronizationPulseSource,  
    source2 As ScopeClockSynchronizationPulseSource  
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeClockSynchronizationPulseSource](#)
Specifies the first [ScopeClockSynchronizationPulseSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeClockSynchronizationPulseSource](#)
Specifies the second [ScopeClockSynchronizationPulseSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeCoefficientInfo Structure

Specifies an array of structures containing gain and offset coefficients for a given channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public struct ScopeCoefficientInfo
```

```
Public Structure ScopeCoefficientInfo
```

The ScopeCoefficientInfo type exposes the following members.

Properties

	Name	Description
	Gain	Gets the gain factor of the given channel.
	Offset	Gets the offset factor of the given channel.

[Top](#)

Methods

	Name	Description
	Equals(Object)	Determines if the current instance of ScopeCoefficientInfo and the object that you specify are equal. (Overrides ValueTypeEquals(Object) .)
	Equals(ScopeCoefficientInfo)	Determines whether the current instance of ScopeCoefficientInfo and the ScopeCoefficientInfo object that you specify are equal.
	GetHashCode	Returns the hash code for the current instance of ScopeCoefficientInfo. (Overrides ValueTypeGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns the fully qualified type name of this instance. (Inherited from ValueType .)

[Top](#)

Operators

	Name	Description
	Equality	Checks whether the two instances of ScopeCoefficientInfo are equal.
	Inequality	Checks whether the two instances of ScopeCoefficientInfo are unequal.

[Top](#)

Remarks

For more information, refer to [NI High-Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeCoefficientInfoGain Property

Gets the gain factor of the given channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double Gain { get; }
```

```
Public ReadOnly Property Gain As Double  
    Get
```

Property Value

Type: [Double](#)

Gain factor.

Remarks

Gain is used for normalizing binary data using the formula $\text{normalized binary data} = \text{raw binary data} \times \text{gain factor} + \text{offset}$

ScopeCoefficientInfoOffset Property

Gets the offset factor of the given channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double Offset { get; }
```

```
Public ReadOnly Property Offset As Double
    Get
```

Property Value

Type: [Double](#)

Offset factor.

Remarks

Offset is used for normalizing binary data using the formula normalized binary data = raw binary data × gain factor + offset

ScopeCoefficientInfoEquality Operator

Checks whether the two instances of [ScopeCoefficientInfo](#) are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeCoefficientInfo coefficientInfo1,
    ScopeCoefficientInfo coefficientInfo2
)
```

```
Public Shared Operator = (
    coefficientInfo1 As ScopeCoefficientInfo,
    coefficientInfo2 As ScopeCoefficientInfo
) As Boolean
```

Parameters

coefficientInfo1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeCoefficientInfo](#)
A [ScopeCoefficientInfo](#) object.

coefficientInfo2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeCoefficientInfo](#)
A [ScopeCoefficientInfo](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeCoefficientInfoInequality Operator

Checks whether the two instances of [ScopeCoefficientInfo](#) are unequal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(
    ScopeCoefficientInfo coefficientInfo1,
    ScopeCoefficientInfo coefficientInfo2
)
```

```
Public Shared Operator <> (
    coefficientInfo1 As ScopeCoefficientInfo,
    coefficientInfo2 As ScopeCoefficientInfo
) As Boolean
```

Parameters

coefficientInfo1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeCoefficientInfo](#)

A [ScopeCoefficientInfo](#) object.

coefficientInfo2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeCoefficientInfo](#)
 A [ScopeCoefficientInfo](#) object.

Return Value

Type: [Boolean](#)
 if the two instances are unequal; otherwise, .

ScopeCoercionEventArgs Class

Represents the event data obtained when a coercion event occurs.

Inheritance Hierarchy

[SystemObject](#)

[SystemEventArgs](#)

NationalInstruments.ModularInstruments.NIScopeScopeCoercionEventArgs

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
 NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeCoercionEventArgs : EventArgs
```

```
Public NotInheritable Class ScopeCoercionEventArgs
    Inherits EventArgs
```

The ScopeCoercionEventArgs type exposes the following members.

Properties

	Name	Description
	Text	Gets the coercion message.

[Top](#)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeDdcDataProcessingMode Enumeration

Specifies how the digital downconverter (DDC) block of a high-speed digitizer should process the data.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeDdcDataProcessingMode
```

```
Public Enumeration ScopeDdcDataProcessingMode
```

Members

Member name	Value	Description
Real	0	The DDC block processes only the real part, I data, of the waveform data points.
Complex	1	The DDC block processes both the real, I, and imaginary, Q, parts of the waveform data points.

ScopeDigitalEdgeAdvanceTrigger Class

Represents the configuration parameters for the digital-edge Advance trigger.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeAdvanceTrigger

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeDigitalEdgeAdvanceTrigger : ScopeSubObject
```

```
Public NotInheritable Class ScopeDigitalEdgeAdvanceTrigger
    Inherits ScopeSubObject
```

The `ScopeDigitalEdgeAdvanceTrigger` type exposes the following members.

Properties

Name	Description
 Source	Gets or sets the source the digitizer monitors for an advance trigger. When the advance trigger is received, the digitizer begins acquiring pretrigger samples.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeStartTriggerSource

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeDigitalEdgeStartTriggerSource
```

```
Public NotInheritable Class ScopeDigitalEdgeStartTriggerSource
```

The ScopeDigitalEdgeStartTriggerSource type exposes the following members.

Properties

	Name	Description
	Immediate	Gets the source terminal for Immediate.
	Pfi0	Gets the source terminal for PFI 0.
	Pfi1	Gets the source terminal for PFI 1.
	Pfi2	Gets the source terminal for PFI 2.
	PxiStar	Gets the source terminal for PXI STAR.
	Rtsi0	Gets the source terminal for RTSI 0.
	Rtsi1	Gets the source terminal for RTSI 1.
	Rtsi2	Gets the source terminal for RTSI 2.

 Rtsi3	Gets the source terminal for RTSI 3.
 Rtsi4	Gets the source terminal for RTSI 4.
 Rtsi5	Gets the source terminal for RTSI 5.
 Rtsi6	Gets the source terminal for RTSI 6.
 Rtsi7	Gets the source terminal for RTSI 7.
 SoftwareTriggerFunction	Gets the source terminal for the software trigger.

[Top](#)

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of <code>ScopeDigitalEdgeStartTriggerSource</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeDigitalEdgeStartTriggerSource)	Determines whether the current instance of <code>ScopeDigitalEdgeStartTriggerSource</code> and the specified <code>ScopeDigitalEdgeStartTriggerSource</code> object are equal.
 	FromString	Creates a <code>ScopeDigitalEdgeStartTriggerSource</code> object from the specified String .
	GetHashCode	Gets the hash code for the current instance of <code>ScopeDigitalEdgeStartTriggerSource</code> . (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of <code>ScopeDigitalEdgeStartTriggerSource</code> to String . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
 	Equality	Checks whether two <code>ScopeDigitalEdgeStartTriggerSource</code> object instances are equal.

 S (String to ScopeDigitalEdgeStartTriggerSource)	Converts a specified String to an equivalent ScopeDigitalEdgeStartTriggerSource object.
 S (ScopeDigitalEdgeStartTriggerSource to String)	Converts a ScopeDigitalEdgeStartTriggerSource object to an equivalent String .
 S Inequality	Checks whether two ScopeDigitalEdgeStartTriggerSource object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeDigitalEdgeStartTriggerSource Properties

The [ScopeDigitalEdgeStartTriggerSource](#) type exposes the following members.

Properties

	Name	Description
 S	Immediate	Gets the source terminal for Immediate.

 Pfi0	Gets the source terminal for PFI 0.
 Pfi1	Gets the source terminal for PFI 1.
 Pfi2	Gets the source terminal for PFI 2.
 PxiStar	Gets the source terminal for PXI STAR.
 Rtsi0	Gets the source terminal for RTSI 0.
 Rtsi1	Gets the source terminal for RTSI 1.
 Rtsi2	Gets the source terminal for RTSI 2.
 Rtsi3	Gets the source terminal for RTSI 3.
 Rtsi4	Gets the source terminal for RTSI 4.
 Rtsi5	Gets the source terminal for RTSI 5.
 Rtsi6	Gets the source terminal for RTSI 6.
 Rtsi7	Gets the source terminal for RTSI 7.
 SoftwareTriggerFunction	Gets the source terminal for the software trigger.

ScopeDigitalEdgeStartTriggerSourceImmediate Property

Gets the source terminal for Immediate.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public static ScopeDigitalEdgeStartTriggerSource Immediate { get; }
```

```
Public Shared ReadOnly Property Immediate As ScopeDigitalEdgeStartTriggerSource
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_IMMEDIATE".

ScopeDigitalEdgeStartTriggerSourceImmediate Property

Gets the source terminal for Immediate.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Immediate { get; }
```

```
Public Shared ReadOnly Property Immediate As ScopeDigitalEdgeStartTriggerSource
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_IMMEDIATE".

ScopeDigitalEdgeStartTriggerSourcePfi0 Property

Gets the source terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeDigitalEdgeStartTriggerSource  
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_PFI_0".

ScopeDigitalEdgeStartTriggerSourcePfi1 Property

Gets the source terminal for PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeDigitalEdgeStartTriggerSource  
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_PFI_1".

ScopeDigitalEdgeStartTriggerSourcePfi2 Property

Gets the source terminal for PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeDigitalEdgeStartTriggerSource  
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_PFI_2".

ScopeDigitalEdgeStartTriggerSourcePxiStar Property

Gets the source terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As ScopeDigitalEdgeStartTriggerSource  
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_PXI_STAR".

ScopeDigitalEdgeStartTriggerSourceRtSi0 Property

Gets the source terminal for RTSI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Rtsi0 { get; }
```

```
Public Shared ReadOnly Property Rtsi0 As ScopeDigitalEdgeStartTriggerSource
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_RTISI_0".

ScopeDigitalEdgeStartTriggerSourceRtsi1 Property

Gets the source terminal for RTSI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Rtsi1 { get; }
```

```
Public Shared ReadOnly Property Rtsi1 As ScopeDigitalEdgeStartTriggerSource
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_RTISI_1".

ScopeDigitalEdgeStartTriggerSourceRtsi2 Property

Gets the source terminal for RTSI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Rtsi2 { get; }
```

```
Public Shared ReadOnly Property Rtsi2 As ScopeDigitalEdgeStartTriggerSource
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_RTISI_2".

ScopeDigitalEdgeStartTriggerSourceRtsi3 Property

Gets the source terminal for RTSI 3.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Rtsi3 { get; }
```

```
Public Shared ReadOnly Property Rtsi3 As ScopeDigitalEdgeStartTriggerSource  
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_RTSI_3".

ScopeDigitalEdgeStartTriggerSourceRtsi4 Property

Gets the source terminal for RTSI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Rtsi4 { get; }
```

```
Public Shared ReadOnly Property Rtsi4 As ScopeDigitalEdgeStartTriggerSource  
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_RTSI_4".

ScopeDigitalEdgeStartTriggerSourceRtsi5 Property

Gets the source terminal for RTSI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Rtsi5 { get; }
```

```
Public Shared ReadOnly Property Rtsi5 As ScopeDigitalEdgeStartTriggerSource  
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_RTISI_5".

ScopeDigitalEdgeStartTriggerSourceRtsi6 Property

Gets the source terminal for RTSI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Rtsi6 { get; }
```

```
Public Shared ReadOnly Property Rtsi6 As ScopeDigitalEdgeStartTriggerSource  
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_RTSI_6".

ScopeDigitalEdgeStartTriggerSourceRtsi7 Property

Gets the source terminal for RTSI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource Rtsi7 { get; }
```

```
Public Shared ReadOnly Property Rtsi7 As ScopeDigitalEdgeStartTriggerSource
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_RTSI_7".

ScopeDigitalEdgeStartTriggerSourceSoftwareTriggerFunction

Gets the source terminal for the software trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource SoftwareTriggerFunction
{ get; }
```

```
Public Shared ReadOnly Property SoftwareTriggerFunction As
ScopeDigitalEdgeStartTriggerSource
    Get
```

Property Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

A [ScopeDigitalEdgeStartTriggerSource](#) representing the [String](#) "VAL_SW_TRIG_FUNC".

ScopeDigitalEdgeStartTriggerSource Properties

The [ScopeDigitalEdgeStartTriggerSource](#) type exposes the following members.

Properties

	Name	Description
	Immediate	Gets the source terminal for Immediate.
	Pfi0	Gets the source terminal for PFI 0.
	Pfi1	Gets the source terminal for PFI 1.
	Pfi2	Gets the source terminal for PFI 2.
	PxiStar	Gets the source terminal for PXI STAR.
	Rtsi0	Gets the source terminal for RTSI 0.
	Rtsi1	Gets the source terminal for RTSI 1.
	Rtsi2	Gets the source terminal for RTSI 2.
	Rtsi3	Gets the source terminal for RTSI 3.
	Rtsi4	Gets the source terminal for RTSI 4.
	Rtsi5	Gets the source terminal for RTSI 5.
	Rtsi6	Gets the source terminal for RTSI 6.
	Rtsi7	Gets the source terminal for RTSI 7.
	SoftwareTriggerFunction	Gets the source terminal for the software trigger.

ScopeDigitalEdgeStartTriggerSource Methods

The [ScopeDigitalEdgeStartTriggerSource](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeDigitalEdgeStartTriggerSource and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeDigitalEdgeStartTriggerSource)	Determines whether the current instance of ScopeDigitalEdgeStartTriggerSource and the specified ScopeDigitalEdgeStartTriggerSource object are equal.
 FromString 	Creates a ScopeDigitalEdgeStartTriggerSource object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeDigitalEdgeStartTriggerSource . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeDigitalEdgeStartTriggerSource to String . (Overrides ObjectToString .)

ScopeDigitalEdgeStartTriggerSourceEquals Method (Object)

Determines whether the current instance of [ScopeDigitalEdgeStartTriggerSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeDigitalEdgeStartTriggerSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeDigitalEdgeStartTriggerSourceEquals Method (Object)

Determines whether the current instance of [ScopeDigitalEdgeStartTriggerSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeDigitalEdgeStartTriggerSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeDigitalEdgeStartTriggerSourceEquals Method (ScopeDigitalEdgeStartTriggerSource)

Determines whether the current instance of [ScopeDigitalEdgeStartTriggerSource](#) and the specified [ScopeDigitalEdgeStartTriggerSource](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeDigitalEdgeStartTriggerSource source  
)
```

```
Public Function Equals (  
    source As ScopeDigitalEdgeStartTriggerSource  
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeStartTriggerSource](#)
Specifies the [ScopeDigitalEdgeStartTriggerSource](#) object to compare to the current instance of [ScopeDigitalEdgeStartTriggerSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeDigitalEdgeStartTriggerSourceFromString Method

Creates a [ScopeDigitalEdgeStartTriggerSource](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeDigitalEdgeStartTriggerSource FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeDigitalEdgeStartTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeDigitalEdgeStartTriggerSource](#) object returned represents.

Return Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

Returns an object of type [ScopeDigitalEdgeStartTriggerSource](#) representing the specified source [String](#).

ScopeDigitalEdgeStartTriggerSource.GetHashCode Method

Gets the hash code for the current instance of [ScopeDigitalEdgeStartTriggerSource](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeDigitalEdgeStartTriggerSource](#).

ScopeDigitalEdgeStartTriggerSourceToString Method

Converts the current instance of [ScopeDigitalEdgeStartTriggerSource](#) to [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override string ToString()
```

```
Public Overrides Function ToString As String
```

Return Value

Type: [String](#)

Returns a [String](#) representing the current instance of [ScopeDigitalEdgeStartTriggerSource](#).

ScopeDigitalEdgeStartTriggerSource Operators and Type Conversions

The [ScopeDigitalEdgeStartTriggerSource](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeDigitalEdgeStartTriggerSource object instances are equal.
	(String to ScopeDigitalEdgeStartTriggerSource)	Converts a specified String to an equivalent ScopeDigitalEdgeStartTriggerSource object.
	(ScopeDigitalEdgeStartTriggerSource to String)	Converts a ScopeDigitalEdgeStartTriggerSource object to an equivalent String .
	Inequality	Checks whether two ScopeDigitalEdgeStartTriggerSource object instances are not equal.

ScopeDigitalEdgeStartTriggerSourceEquality Operator

Checks whether two [ScopeDigitalEdgeStartTriggerSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeDigitalEdgeStartTriggerSource source1,
    ScopeDigitalEdgeStartTriggerSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeDigitalEdgeStartTriggerSource,
    source2 As ScopeDigitalEdgeStartTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeStartTriggerSource](#)
Specifies the first [ScopeDigitalEdgeStartTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeStartTriggerSource](#)
Specifies the second [ScopeDigitalEdgeStartTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeDigitalEdgeStartTriggerSourceEquality Operator

Checks whether two [ScopeDigitalEdgeStartTriggerSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeDigitalEdgeStartTriggerSource source1,
    ScopeDigitalEdgeStartTriggerSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeDigitalEdgeStartTriggerSource,
    source2 As ScopeDigitalEdgeStartTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeStartTriggerSource](#)
Specifies the first [ScopeDigitalEdgeStartTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeStartTriggerSource](#)
Specifies the second [ScopeDigitalEdgeStartTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeDigitalEdgeStartTriggerSource Conversion (String to ScopeDigitalEdgeStartTriggerSource)

Converts a specified [String](#) to an equivalent [ScopeDigitalEdgeStartTriggerSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeDigitalEdgeStartTriggerSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeDigitalEdgeStartTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeDigitalEdgeStartTriggerSource](#) object.

Return Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

Returns the [ScopeDigitalEdgeStartTriggerSource](#) object representing the specified [String](#).

ScopeDigitalEdgeStartTriggerSource Conversion (String to ScopeDigitalEdgeStartTriggerSource)

Converts a specified [String](#) to an equivalent [ScopeDigitalEdgeStartTriggerSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeDigitalEdgeStartTriggerSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeDigitalEdgeStartTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeDigitalEdgeStartTriggerSource](#) object.

Return Value

Type: [ScopeDigitalEdgeStartTriggerSource](#)

Returns the [ScopeDigitalEdgeStartTriggerSource](#) object representing the specified [String](#).

ScopeDigitalEdgeStartTriggerSource Conversion
(ScopeDigitalEdgeStartTriggerSource to String)

Converts a [ScopeDigitalEdgeStartTriggerSource](#) object to an equivalent [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator string (
    ScopeDigitalEdgeStartTriggerSource source
)
```

```
Public Shared Widening Operator CType (
    source As ScopeDigitalEdgeStartTriggerSource
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeStartTriggerSource](#)
Specifies the [ScopeDigitalEdgeStartTriggerSource](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeDigitalEdgeStartTriggerSource](#) object.

ScopeDigitalEdgeStartTriggerSourceInequality Operator

Checks whether two [ScopeDigitalEdgeStartTriggerSource](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(
    ScopeDigitalEdgeStartTriggerSource source1,
    ScopeDigitalEdgeStartTriggerSource source2
)
```

```
Public Shared Operator <> (
    source1 As ScopeDigitalEdgeStartTriggerSource,
    source2 As ScopeDigitalEdgeStartTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeStartTriggerSource](#)
Specifies the first [ScopeDigitalEdgeStartTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeDigitalEdgeStartTriggerSource](#)
 Specifies the second [ScopeDigitalEdgeStartTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeDriverIdentity Class

Provides the methods and properties that provide information about the instrument and the NI-SCOPE driver.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeDriverIdentity](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeDriverIdentity : ScopeSubObject,
    IIviDriverIdentity, IIviComponentIdentity
```

```
Public NotInheritable Class ScopeDriverIdentity
    Inherits ScopeSubObject
    Implements IIviDriverIdentity, IIviComponentIdentity
```

The ScopeDriverIdentity type exposes the following members.

Properties

Name	Description
 Description	Gets a string that contains a brief description of NI-SCOPE driver.
 Identifier	Gets a string that contains an identifier for NI-SCOPE.NET API.
 InstrumentFirmwareRevision	Gets the firmware revision information for the NI-SCOPE instrument currently in use.
 InstrumentManufacturer	Gets the name of the manufacturer for the NI-SCOPE instrument currently in use.
 InstrumentModel	Gets the model number or name of the NI-SCOPE instrument currently in use.
 Revision	Gets a string that contains additional version information about the NI-SCOPE driver.
 SerialNumber	Gets the serial number of the instrument.
 SpecificationMajorVersion	Gets an integer that specifies the major version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.
 SpecificationMinorVersion	Gets a integer that specifies the minor version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.
 Vendor	Gets a string that contains the name of the vendor that supplies the NI-SCOPE driver.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)

 GetGroupCapabilities	Returns a list of names of class capability groups that the IVI specific driver implements.
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetSupportedInstrumentModels	Returns a list of names of instrument models with which the IVI specific driver is compatible.
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to [NI High Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeDriverIdentity Properties

The [ScopeDriverIdentity](#) type exposes the following members.

Properties

Name	Description
 Description	Gets a string that contains a brief description of NI-SCOPE driver.

 Identifier	Gets a string that contains an identifier for NI-SCOPE.NET API.
 InstrumentFirmwareRevision	Gets the firmware revision information for the NI-SCOPE instrument currently in use.
 InstrumentManufacturer	Gets the name of the manufacturer for the NI-SCOPE instrument currently in use.
 InstrumentModel	Gets the model number or name of the NI-SCOPE instrument currently in use.
 Revision	Gets a string that contains additional version information about the NI-SCOPE driver.
 SerialNumber	Gets the serial number of the instrument.
 SpecificationMajorVersion	Gets an integer that specifies the major version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.
 SpecificationMinorVersion	Gets a integer that specifies the minor version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.
 Vendor	Gets a string that contains the name of the vendor that supplies the NI-SCOPE driver.

ScopeDriverIdentityDescription Property

Gets a string that contains a brief description of NI-SCOPE driver.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Description { get; }
```

```
Public ReadOnly Property Description As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains a brief description about NI-SCOPE driver.

Implements

[IIVIComponentIdentityDescription](#)

ScopeDriverIdentityInstrumentFirmwareRevision Property

Gets the firmware revision information for the NI-SCOPE instrument currently in use.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string InstrumentFirmwareRevision { get; }
```

```
Public ReadOnly Property InstrumentFirmwareRevision As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains the firmware revision information for the NI-SCOPE instrument in use.

Implements

IlviDriverIdentityInstrumentFirmwareRevision

ScopeDriverIdentityInstrumentManufacturer Property

Gets the name of the manufacturer for the NI-SCOPE instrument currently in use.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#/**VB**

```
public string InstrumentManufacturer { get; }
```

```
Public ReadOnly Property InstrumentManufacturer As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains the name of the manufacturer for the NI-SCOPE instrument currently in use.

Implements

IlviDriverIdentityInstrumentManufacturer

ScopeDriverIdentityInstrumentModel Property

Gets the model number or name of the NI-SCOPE instrument currently in use.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string InstrumentModel { get; }
```

```
Public ReadOnly Property InstrumentModel As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains the model number or name of the NI-SCOPE instrument currently in use.

Implements

[IIVIIdentityInstrumentModel](#)

See Also

Reference

[ScopeDriverIdentity Class](#)

ScopeDriverIdentityRevision Property

Gets a string that contains additional version information about the NI-SCOPE driver.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Revision { get; }
```

```
Public ReadOnly Property Revision As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains additional version information about the NI-SCOPE driver.

Implements

[IIVIComponentIdentityRevision](#)

See Also

Reference

[ScopeDriverIdentity Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeDriverIdentitySerialNumber Property

Gets the serial number of the instrument.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string SerialNumber { get; }
```

```
Public ReadOnly Property SerialNumber As String
    Get
```

Property Value

Type: [String](#)

The serial number of the instrument.

Exceptions

Exception	Condition
ObjectDisposedException	SerialNumber was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

ScopeDriverIdentitySpecificationMajorVersion Property

Gets an integer that specifies the major version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public int SpecificationMajorVersion { get; }
```

```
Public ReadOnly Property SpecificationMajorVersion As Integer  
    Get
```

Property Value

Type: [Int32](#)

A [Int32](#) that contains the major version number of the NI-SCOPE .NET class library.

Implements

[IIVIIdentitySpecificationMajorVersion](#)

See Also

Reference

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeDriverIdentitySpecificationMinorVersion Property

Gets a integer that specifies the minor version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public int SpecificationMinorVersion { get; }
```

```
Public ReadOnly Property SpecificationMinorVersion As Integer  
    Get
```

Property Value

Type: [Int32](#)

A [Int32](#) that contains the minor version number of the NI-SCOPE .NET class library.

Implements

[IIVIIdentitySpecificationMinorVersion](#)

See Also

Reference

[ScopeDriverIdentity Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

ScopeDriverIdentityVendor Property

Gets a string that contains the name of the vendor that supplies the NI-SCOPE driver.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Vendor { get; }
```

```
Public ReadOnly Property Vendor As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains the name of the vendor that supplies the NI-SCOPE driver.

Implements

[IIVIComponentIdentityVendor](#)

See Also

Reference

[ScopeDriverIdentity Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

ScopeDriverIdentity Properties

The [ScopeDriverIdentity](#) type exposes the following members.

Properties

Name	Description
 Description	Gets a string that contains a brief description of NI-SCOPE driver.
 Identifier	Gets a string that contains an identifier for NI-SCOPE.NET API.
 InstrumentFirmwareRevision	Gets the firmware revision information for the NI-SCOPE instrument currently in use.
 InstrumentManufacturer	Gets the name of the manufacturer for the NI-SCOPE instrument currently in use.
 InstrumentModel	Gets the model number or name of the NI-SCOPE instrument currently in use.
 Revision	Gets a string that contains additional version information about the NI-SCOPE driver.
 SerialNumber	Gets the serial number of the instrument.
 SpecificationMajorVersion	Gets an integer that specifies the major version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.
 SpecificationMinorVersion	Gets a integer that specifies the minor version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.
 Vendor	Gets a string that contains the name of the vendor that supplies the NI-SCOPE driver.

ScopeDriverIdentityDescription Property

Gets a string that contains a brief description of NI-SCOPE driver.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Description { get; }
```

```
Public ReadOnly Property Description As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains a brief description about NI-SCOPE driver.

Implements

[IIVIComponentIdentityDescription](#)

See Also

Reference

[ScopeDriverIdentity Class](#)

ScopeDriverIdentityDescription Property

Gets a string that contains a brief description of NI-SCOPE driver.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Description { get; }
```

```
Public ReadOnly Property Description As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains a brief description about NI-SCOPE driver.

Implements

[IIVIComponentIdentityDescription](#)

See Also

ScopeDriverIdentityIdentifier Property

Gets a string that contains an identifier for NI-SCOPE.NET API.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: [NationalInstruments.ModularInstruments.NIScope.Fx45](#) (in [NationalInstruments.ModularInstruments.NIScope.Fx45.dll](#)) Version: 2020

Syntax

C#VB

```
public string Identifier { get; }
```

```
Public ReadOnly Property Identifier As String
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains an identifier for NI-SCOPE.NET API.

Implements

[IIVIIdentityIdentifier](#)

See Also

ScopeDriverIdentityInstrumentFirmwareRevision Property

Gets the firmware revision information for the NI-SCOPE instrument currently in use.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public string InstrumentFirmwareRevision { get; }
```

```
Public ReadOnly Property InstrumentFirmwareRevision As String
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains the firmware revision information for the NI-SCOPE instrument in use.

Implements

[IIVIInstrumentFirmwareRevision](#)

See Also

ScopeDriverIdentityInstrumentManufacturer Property

Gets the name of the manufacturer for the NI-SCOPE instrument currently in use.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string InstrumentManufacturer { get; }
```

```
Public ReadOnly Property InstrumentManufacturer As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains the name of the manufacturer for the NI-SCOPE instrument currently in use.

Implements

IlviDriverIdentityInstrumentManufacturer

See Also

Reference

ScopeDriverIdentityInstrumentModel Property

Gets the model number or name of the NI-SCOPE instrument currently in use.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string InstrumentModel { get; }
```

```
Public ReadOnly Property InstrumentModel As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains the model number or name of the NI-SCOPE instrument currently in use.

Implements

IlviDriverIdentityInstrumentModel

See Also

Reference

[ScopeDriverIdentity Class](#)

ScopeDriverIdentityRevision Property

Gets a string that contains additional version information about the NI-SCOPE driver.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Revision { get; }
```

```
Public ReadOnly Property Revision As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains additional version information about the NI-SCOPE driver.

Implements

[IIVIComponentIdentityRevision](#)

See Also

Reference

[ScopeDriverIdentity Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

ScopeDriverIdentitySerialNumber Property

Gets the serial number of the instrument.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string SerialNumber { get; }
```

```
Public ReadOnly Property SerialNumber As String
    Get
```

Property Value

Type: [String](#)

The serial number of the instrument.

Exceptions

Exception	Condition
ObjectDisposedException	SerialNumber was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

ScopeDriverIdentitySpecificationMajorVersion Property

Gets an integer that specifies the major version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public int SpecificationMajorVersion { get; }
```

```
Public ReadOnly Property SpecificationMajorVersion As Integer  
    Get
```

Property Value

Type: [Int32](#)

A [Int32](#) that contains the major version number of the NI-SCOPE .NET class library.

Implements

[IIVIIdentitySpecificationMajorVersion](#)

See Also

ScopeDriverIdentitySpecificationMinorVersion Property

Gets a integer that specifies the minor version number of the class specification in accordance with which the NI-SCOPE .NET class library was developed.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public int SpecificationMinorVersion { get; }
```

```
Public ReadOnly Property SpecificationMinorVersion As Integer  
    Get
```

Property Value

Type: [Int32](#)

A [Int32](#) that contains the minor version number of the NI-SCOPE .NET class library.

Implements

[IIVIIdentitySpecificationMinorVersion](#)

See Also

ScopeDriverIdentityVendor Property

Gets a string that contains the name of the vendor that supplies the NI-SCOPE driver.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Vendor { get; }
```

```
Public ReadOnly Property Vendor As String
    Get
```

Property Value

Type: [String](#)

A [String](#) that contains the name of the vendor that supplies the NI-SCOPE driver.

Implements

IlviComponentIdentityVendor

ScopeDriverIdentity Methods

The [ScopeDriverIdentity](#) type exposes the following members.

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object.

	(Inherited from Object .)
 GetGroupCapabilities	Returns a list of names of class capability groups that the IVI specific driver implements.
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetSupportedInstrumentModels	Returns a list of names of instrument models with which the IVI specific driver is compatible.
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeDriverIdentityGetGroupCapabilities Method

Returns a list of names of class capability groups that the IVI specific driver implements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public string[] GetGroupCapabilities ()
```

```
Public Function GetGroupCapabilities As String()
```

Return Value

Type: [String](#)

An array of [String](#) containing the list of names of class capability groups that the NI-SCOPE driver implements.

Implements

IlviDriverIdentityGetGroupCapabilities

See Also

ScopeDriverIdentityGetGroupCapabilities Method

Returns a list of names of class capability groups that the IVI specific driver implements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string[] GetGroupCapabilities()
```

```
Public Function GetGroupCapabilities As String()
```

Return Value

Type: [String](#)

An array of [String](#) containing the list of names of class capability groups that the NI-SCOPE driver implements.

Implements

[IIVIIdentityGetGroupCapabilities](#)

See Also

Reference

ScopeDriverIdentityGetSupportedInstrumentModels Method

Returns a list of names of instrument models with which the IVI specific driver is compatible.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string[] GetSupportedInstrumentModels ()
```

```
Public Function GetSupportedInstrumentModels As String()
```

Return Value

Type: [String](#)

An array of [String](#) containing the list of names of instrument models with which the NI-SCOPE is compatible.

Implements

[IIviDriverIdentityGetSupportedInstrumentModels](#)

ScopeDriverLock Class

Provides synchronization locks obtained on the driver session.

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeDriverLock

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public sealed class ScopeDriverLock : IDisposable,
    IIviDriverLock
```

```
Public NotInheritable Class ScopeDriverLock
    Implements IDisposable, IIviDriverLock
```

The ScopeDriverLock type exposes the following members.

Methods

Name	Description
------	-------------

 Dispose	Releases a driver synchronization lock.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)
 Unlock	Releases a driver synchronization lock.

[Top](#)

Remarks

For more information, refer to [NI High Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeDriverOperation Class

Provides properties that affect the operation of the instrument driver.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeDriverOperation

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeDriverOperation : ScopeSubObject,
    IIVIvDriverOperation, IDisposable, ISupportSynchronizationContext
```

```
Public NotInheritable Class ScopeDriverOperation
    Inherits ScopeSubObject
    Implements IIVIvDriverOperation, IDisposable,
    ISupportSynchronizationContext
```

The ScopeDriverOperation type exposes the following members.

Properties

Name	Description
 Cache	Gets or sets whether to cache the value of properties.
 DriverSetup	Gets the driver setup string used to set the initial values for properties that are specific to NI-SCOPE.
 InterchangeCheck	Gets or sets whether to perform interchangeability checking and retrieve interchangeability warnings.
 IOResourceDescriptor	Gets the resource name that the NI-SCOPE uses to identify the physical instrument.
 LogicalName	Gets the logical name that you specified when opening the current session.
 QueryInstrumentStatus	Gets or sets whether NI-SCOPE queries the instrument status after each operation. NI-SCOPE can choose to ignore status checking for particular properties, regardless of the setting of this property.
 RangeCheck	Gets or sets whether to validate property values and method parameters. If you enable this property, NI-SCOPE validates the parameter values that you pass to NI-SCOPE methods.
 RecordCoercions	Gets or sets whether the IVI engine keeps a list of the value coercions it makes for integer and real type properties.
 Simulate	Gets whether or not to simulate NI-SCOPE I/O operations.
 SynchronizeCallbacks	Gets or sets how events and callback delegates are invoked.

[Top](#)

Methods

Name	Description
 Dispose	Closes the specified session and deallocates the reserved resources, if not already disposed.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Events

Name	Description
 Coercion	Occurs when a property is coerced.
 InterchangeCheckWarning	Occurs when an interchange check warning event is raised.
 Warning	Occurs when the driver creates a driver warning.

[Top](#)

Remarks

For more information, refer to [NI High Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeDriverOperationCache Property

Gets or sets whether to cache the value of properties.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Cache { get; set; }
```

```
Public Property Cache As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

if caching is enabled; otherwise, . The default value is .

Implements

IlviDriverOperationCache

Remarks

If you set this property to , NI-SCOPE tracks the current NI-SCOPE instrument settings and avoids sending redundant commands to the instrument. NI-SCOPE can either always cache or never cache particular properties, regardless of the setting of this property.

ScopeDriverOperationDriverSetup Property

Gets the driver setup string used to set the initial values for properties that are specific to NI-SCOPE.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string DriverSetup { get; }
```

```
Public ReadOnly Property DriverSetup As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) representing the driver setup string that you specified in the IVI configuration store.

The default value is an empty string.

Implements

IlviDriverOperationDriverSetup

See Also

Reference

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeDriverOperationIOResourceDescriptor Property

Gets the resource name that the NI-SCOPE uses to identify the physical instrument.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string IOResourceDescriptor { get; }
```

```
Public ReadOnly Property IOResourceDescriptor As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) representing the resource descriptor that you specified for the physical instrument.

Implements

IlviDriverOperationIOResourceDescriptor

Remarks

If you initialize NI-SCOPE with a logical name, this property contains the resource name that corresponds to the entry in the IVI configuration utility. If you initialize NI-SCOPE with the resource name, this property contains that value.

C#VB

```
public string LogicalName { get; }
```

```
Public ReadOnly Property LogicalName As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) representing the logical name that you specified when opening the current IVI session.

Implements

IlviDriverOperationLogicalName

Remarks

You may pass a logical name to the NI-SCOPE session during initialization of session. The IVI configuration utility must contain an entry for the logical name. The logical name entry refers to a driver session section in the IVI configuration file. The driver session section specifies a physical instrument and initial options.

ScopeDriverOperationQueryInstrumentStatus Property

Gets or sets whether NI-SCOPE queries the instrument status after each operation. NI-SCOPE can choose to ignore status checking for particular properties, regardless of the setting of this property.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool QueryInstrumentStatus { get; set; }
```

```
Public Property QueryInstrumentStatus As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

if querying is enabled; otherwise, .

Implements

IlviDriverOperationQueryInstrumentStatus

Remarks

NI-SCOPE can choose to ignore status checking for particular properties, regardless of the setting of this property.

Querying the instrument status is useful for debugging. After you validate your program, you can set this property to to disable status checking and maximize performance.

ScopeDriverOperationRangeCheck Property

Gets or sets whether to validate property values and method parameters. If you enable this property, NI-SCOPE validates the parameter values that you pass to NI-SCOPE methods.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool RangeCheck { get; set; }
```

```
Public Property RangeCheck As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

if validating property values and method parameters are enabled; otherwise, .

Implements

IlviDriverOperationRangeCheck

Remarks

Range-checking parameters are very useful for debugging. After you validate your program, you can set this property to to disable range checking and maximize performance.

ScopeDriverOperationSimulate Property

Gets whether or not to simulate NI-SCOPE I/O operations.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Simulate { get; set; }
```

```
Public Property Simulate As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

if NI-SCOPE simulates instrument driver I/O operations; if NI-SCOPE communicates directly with the instrument.

Implements

IlviDriverOperationSimulate

Remarks

This property is useful for debugging applications without using hardware. After a session is opened, you cannot change the simulation state.

ScopeDriverOperationSynchronizeCallbacks Property

Gets or sets how events and callback delegates are invoked.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool SynchronizeCallbacks { get; set; }
```

```
Public Property SynchronizeCallbacks As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

if events and callbacks are invoked through the [Send\(SendOrPostCallback, Object\)](#) or [Post\(SendOrPostCallback, Object\)](#); otherwise, events and callbacks are invoked directly.

The default value is .

Implements

[ISupportSynchronizationContextSynchronizeCallbacks](#)

ScopeDriverOperation Properties

The [ScopeDriverOperation](#) type exposes the following members.

Properties

Name	Description
 Cache	Gets or sets whether to cache the value of properties.

 DriverSetup	Gets the driver setup string used to set the initial values for properties that are specific to NI-SCOPE.
 InterchangeCheck	Gets or sets whether to perform interchangeability checking and retrieve interchangeability warnings.
 IOResourceDescriptor	Gets the resource name that the NI-SCOPE uses to identify the physical instrument.
 LogicalName	Gets the logical name that you specified when opening the current session.
 QueryInstrumentStatus	Gets or sets whether NI-SCOPE queries the instrument status after each operation. NI-SCOPE can choose to ignore status checking for particular properties, regardless of the setting of this property.
 RangeCheck	Gets or sets whether to validate property values and method parameters. If you enable this property, NI-SCOPE validates the parameter values that you pass to NI-SCOPE methods.
 RecordCoercions	Gets or sets whether the IVI engine keeps a list of the value coercions it makes for integer and real type properties.
 Simulate	Gets whether or not to simulate NI-SCOPE I/O operations.
 SynchronizeCallbacks	Gets or sets how events and callback delegates are invoked.

ScopeDriverOperationCache Property

Gets or sets whether to cache the value of properties.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Cache { get; set; }
```

```
Public Property Cache As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

if caching is enabled; otherwise, . The default value is .

Implements

IlviDriverOperationCache

Remarks

If you set this property to , NI-SCOPE tracks the current NI-SCOPE instrument settings and avoids sending redundant commands to the instrument. NI-SCOPE can either always cache or never cache particular properties, regardless of the setting of this property.

ScopeDriverOperationDriverSetup Property

Gets the driver setup string used to set the initial values for properties that are specific to NI-SCOPE.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string DriverSetup { get; }
```

```
Public ReadOnly Property DriverSetup As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) representing the driver setup string that you specified in the IVI configuration store.

The default value is an empty string.

Implements

IlviDriverOperationDriverSetup

See Also

Reference

ScopeDriverOperationIOResourceDescriptor Property

Gets the resource name that the NI-SCOPE uses to identify the physical instrument.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string IOResourceDescriptor { get; }
```

```
Public ReadOnly Property IOResourceDescriptor As String
    Get
```

Property Value

Type: [String](#)

A [String](#) representing the resource descriptor that you specified for the physical instrument.

Implements

[IlviDriverOperationIOResourceDescriptor](#)

Remarks

If you initialize NI-SCOPE with a logical name, this property contains the resource name that corresponds to the entry in the IVI configuration utility. If you initialize NI-SCOPE with the resource name, this property contains that value.

ScopeDriverOperationLogicalName Property

Gets the logical name that you specified when opening the current session.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: [NationalInstruments.ModularInstruments.NIScope.Fx45](#) (in

[NationalInstruments.ModularInstruments.NIScope.Fx45.dll](#)) Version: 2020

Syntax

C#VB

```
public string LogicalName { get; }
```

```
Public ReadOnly Property LogicalName As String  
    Get
```

Property Value

Type: [String](#)

A [String](#) representing the logical name that you specified when opening the current IVI session.

Implements

IlviDriverOperationLogicalName

Remarks

You may pass a logical name to the NI-SCOPE session during initialization of session. The IVI configuration utility must contain an entry for the logical name. The logical name entry refers to a driver session section in the IVI configuration file. The driver session section specifies a physical instrument and initial options.

ScopeDriverOperationQueryInstrumentStatus Property

Gets or sets whether NI-SCOPE queries the instrument status after each operation. NI-SCOPE can choose to ignore status checking for particular properties, regardless of the setting of this property.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool QueryInstrumentStatus { get; set; }
```

```
Public Property QueryInstrumentStatus As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

if querying is enabled; otherwise, .

Implements

IlviDriverOperationQueryInstrumentStatus

Remarks

NI-SCOPE can choose to ignore status checking for particular properties, regardless of the setting of this property.

Querying the instrument status is useful for debugging. After you validate your program, you can set this property to to disable status checking and maximize performance.

ScopeDriverOperationSimulate Property

Gets whether or not to simulate NI-SCOPE I/O operations.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Simulate { get; set; }
```

```
Public Property Simulate As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

if NI-SCOPE simulates instrument driver I/O operations; if NI-SCOPE communicates directly with the instrument.

Implements

IlviDriverOperationSimulate

Remarks

This property is useful for debugging applications without using hardware. After a session is opened, you cannot change the simulation state.

[ScopeDriverOperationSynchronizeCallbacks Property](#)

Gets or sets how events and callback delegates are invoked.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool SynchronizeCallbacks { get; set; }
```

```
Public Property SynchronizeCallbacks As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

if events and callbacks are invoked through the [Send\(SendOrPostCallback, Object\)](#) or [Post\(SendOrPostCallback, Object\)](#); otherwise, events and callbacks are invoked directly.

The default value is .

Implements

ISupportSynchronizationContextSynchronizeCallbacks

ScopeDriverOperation Methods

The [ScopeDriverOperation](#) type exposes the following members.

Methods

Name	Description
 Dispose	Closes the specified session and deallocates the reserved resources, if not already disposed.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeDriverOperationDispose Method

Closes the specified session and deallocates the reserved resources, if not already disposed.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void Dispose()
```

Public Sub Dispose

Implements

IDisposable.Dispose

Remarks

You can call this method safely more than once, even if the session is already closed. A call to this method disposes the SafeHandle class used to hold the instrument handle. If the call to this method fails due to some reason, such as the session being closed by some external means, you will not be notified about the failure. To help you identify failures in the ReleaseHandle method of the SafeHandle class, managed debugging assistant (MDA) is activated.

For details, refer to <http://msdn.microsoft.com/en-us/library/85eak4a0.aspx>.

The call to this method fails when you externally close a session by:

- Initializing a session with a resource name for which the session is already open, within the same process. This causes the instrument handle held by the existing session to become invalid.
- Getting the instrument handle out using [GetInstrumentHandle](#) and closing this handle directly.

ScopeDriverUtility Class

Contains methods that provide a basic set of utility operations.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeDriverUtility

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeDriverUtility : ScopeSubObject,
    IIVIUtility, IDisposable
```

```
Public NotInheritable Class ScopeDriverUtility
    Inherits ScopeSubObject
    Implements IIVIUtility, IDisposable
```

The ScopeDriverUtility type exposes the following members.

Properties

	Name	Description
	<u>FpgaBitfilePath</u>	Gets the absolute file path to the bitfile loaded on the FPGA.

Top

Methods

	Name	Description
	<u>Disable</u>	Places the instrument in a quiescent state as quickly as possible.

Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
ExportAttributeConfigurationBuffer	Exports the attribute configuration of the session to a Byte array buffer.
ExportAttributeConfigurationFile	Exports the attribute configuration of the session to the specified file.
GetChannelName	Returns the channel name given a Int32 one-based index.
GetChannelNameFromString	Returns a comma-separated channel-name list given a String index list.
GetHashCode	Serves as the default hash function. (Inherited from Object .)
GetType	Gets the Type of the current instance. (Inherited from Object .)
ImportAttributeConfigurationBuffer	Imports the attribute configuration to the session from the Byte array configuration.
ImportAttributeConfigurationFile	Imports an attribute configuration to the session from the specified file.
Lock	Attempts to acquire a synchronization lock on this instance of the driver.
Lock(PrecisionTimeSpan)	Attempts to acquire a synchronization lock on this instance of the driver and specifies the maximum amount of time to wait to acquire the lock.
QueryDriverRevision	Returns the revision numbers of the NI-SCOPE instrument driver.
Reset	Resets all properties to their default value and stops export of all external signals and events.
ResetDevice	Performs a hard reset on the instrument.
SelfTest	Performs a self-test on the NI-SCOPE instrument and returns the test result.
ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

ScopeDriverUtilityFpgaBitfilePath Property

Gets the absolute file path to the bitfile loaded on the FPGA.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string FpgaBitfilePath { get; }
```

```
Public ReadOnly Property FpgaBitfilePath As String
    Get
```

Property Value

Type: [String](#)

The absolute file path to the bitfile loaded on the FPGA.

Exceptions

Exception	Condition
ObjectDisposedException	FpgaBitfilePath was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
OperationNotSupportedException	FpgaBitfilePath was accessed in a session to an unsupported instrument.
IviDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

ScopeDriverUtility Methods

The [ScopeDriverUtility](#) type exposes the following members.

Methods

Name	Description
------	-------------

Disable	Places the instrument in a quiescent state as quickly as possible.
Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
ExportAttributeConfigurationBuffer	Exports the attribute configuration of the session to a Byte array buffer.
ExportAttributeConfigurationFile	Exports the attribute configuration of the session to the specified file.
GetChannelName	Returns the channel name given a Int32 one-based index.
GetChannelNameFromString	Returns a comma-separated channel-name list given a String index list.
GetHashCode	Serves as the default hash function. (Inherited from Object .)
GetType	Gets the Type of the current instance. (Inherited from Object .)
ImportAttributeConfigurationBuffer	Imports the attribute configuration to the session from the Byte array configuration.
ImportAttributeConfigurationFile	Imports an attribute configuration to the session from the specified file.
Lock	Attempts to acquire a synchronization lock on this instance of the driver.
Lock(PrecisionTimeSpan)	Attempts to acquire a synchronization lock on this instance of the driver and specifies the maximum amount of time to wait to acquire the lock.
QueryDriverRevision	Returns the revision numbers of the NI-SCOPE instrument driver.
Reset	Resets all properties to their default value and stops export of all external signals and events.
ResetDevice	Performs a hard reset on the instrument.
SelfTest	Performs a self-test on the NI-SCOPE instrument and returns the test result.
ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeDriverUtilityDisable Method

Places the instrument in a quiescent state as quickly as possible.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void Disable()
```

```
Public Sub Disable
```

Remarks

In a quiescent state, an instrument has no or minimal effect on the external system to which it is connected.

ScopeDriverUtilityExportAttributeConfigurationBuffer Method

Exports the attribute configuration of the session to a [Byte](#) array buffer.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public byte[] ExportAttributeConfigurationBuffer()
```

```
Public Function ExportAttributeConfigurationBuffer As Byte()
```

Return Value

Type: [Byte](#)

Returns a [Byte](#) array populated with the exported attribute configuration.

Exceptions

Exception	Condition
ObjectDisposedException	The <code>ExportAttributeConfigurationBuffer</code> method was called after the associated NIScope object was disposed.
IviDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

You can export and import session attribute configurations only between devices with identical model numbers, channel counts, and onboard memory sizes and between NI-SCOPE sessions with the same number of initialized channels.

This method verifies that the attributes you have configured for the session are valid. If the configuration is invalid, NI-SCOPE returns an error.

When importing and exporting configurations between NI-SCOPE sessions that were both initialized with multiple instruments, the configurations of the exporting instruments are mapped to the importing instruments in the order you specify in the "resourceName" input to the [NIScope](#) constructor. For example, if your entry for "resourceName" is "PXI1Slot1,PXI1Slot2" for the exporting session and "PXI2Slot2,PXI2Slot3" for the importing session:

- The configuration exported from PXI1Slot1 is imported into PXI2Slot2.
- The configuration exported from PXI1Slot2 is imported into PXI2Slot3.

Note

NI-SCOPE will return an error if the total number of channels initialized for the exporting session is not equal to the total number of channels initialized for the importing session.

ScopeDriverUtilityExportAttributeConfigurationFile Method

Exports the attribute configuration of the session to the specified file.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ExportAttributeConfigurationFile(  
    string filePath  
)
```

```
Public Sub ExportAttributeConfigurationFile (  
    filePath As String  
)
```

Parameters

filePath

Type: [SystemString](#)

The absolute path to the file to contain the exported attribute configuration. If you specify an empty or relative path, this method returns an error. The default file extension is `.niscopeconfig`.

Exceptions

Exception	Condition
ObjectDisposedException	The <code>ExportAttributeConfigurationFile(String)</code> method was called after the associated NIScope object was disposed.
<code>IviDriverException</code>	The underlying NI-SCOPE driver returned an error.

Remarks

You can export and import session attribute configurations only between devices with identical model numbers, channel counts, and onboard memory sizes and between NI-SCOPE sessions with the same number of initialized channels.

This method verifies that the attributes you have configured for the session are valid. If the configuration is invalid, NI-SCOPE returns an error.

When importing and exporting configurations between NI-SCOPE sessions that were both initialized with multiple instruments, the configurations of the exporting instruments are mapped to the importing instruments in the order you specify in the "resourceName" input to the [NIScope](#) constructor. For example, if your entry for "resourceName" is "PXI1Slot1,PXI1Slot2" for the exporting session and "PXI2Slot2,PXI2Slot3" for the importing session:

- The configuration exported from PXI1Slot1 is imported into PXI2Slot2.
- The configuration exported from PXI1Slot2 is imported into PXI2Slot3.

Note

NI-SCOPE will return an error if the total number of channels initialized for the exporting session is not equal to the total number of channels initialized for the importing session.

ScopeDriverUtilityGetChannelName Method

Returns the channel name given a [Int32](#) one-based index.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string GetChannelName(
    int index
)
```

```
Public Function GetChannelName (
    index As Integer
) As String
```

Parameters

index

Type: [SystemInt32](#)

One-based index for the desired channel in the session. Valid values are from 1 to the number of channels in the session

Return Value

Type: [String](#)

Returns a [String](#) populated with the channel name.

Exceptions

Exception	Condition
ObjectDisposedException	The GetChannelName(Int32) method was called after the associated NIScope or ScopeDriverUtility object was disposed.
OutOfRangeException	The indicated index is out of range (less than zero or greater than the number of channels in the session)

Remarks

See Also

Reference

ScopeDriverUtilityGetChannelNameFromString Method

Returns a comma-separated channel-name list given a [String](#) index list.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public string GetChannelNameFromString(
    string index
)
```

```
Public Function GetChannelNameFromString (
    index As String
) As String
```

Parameters

index

Type: [SystemString](#)

Index list for the channels in the session. Valid values are from 0 to the number of channels in the session minus 1. The input string can be in one of the following formats: "0,2,3,1" !-zdocsholder-!> Comma-separated list "0-3" !-zdocsholder-!> Range using a hyphen "0:3" !-zdocsholder-!> Range using a colon - The above formats can be combined: "1, 1:2, 0-3" - Out-of-

order indices are supported: "2,3,0" - Repeated indices are supported: "1, 2, 2, 3, 0" - White-space characters (space, tab, newline, vertical tab, feed, carriage return) are allowed between characters: " 1,2", "1 , 2 ", " 1 ,2 ", "1, 2", "1 , 2" are valid strings - Ranges can be incrementing (0-3) or decrementing (3-0)

Return Value

Type: [String](#)

Returns a [String](#) populated with the corresponding name for each index in the same order the indices appear in the input string.

Exceptions

Exception	Condition
ObjectDisposedException	The <code>GetChannelNameFromString(String)</code> method was called after the associated NIScope or ScopeDriverUtility object was disposed.
OutOfRangeException	If one of the indices in the list is greater than or equal to the number of channels in the session.
SelectorNameException	If the input list does not have a valid format or contains a negative index.
IviCDriverException	If the input list is empty.

Remarks

ScopeDriverUtilityImportAttributeConfigurationBuffer Method

Imports the attribute configuration to the session from the [Byte](#) array configuration.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ImportAttributeConfigurationBuffer(
    byte[] configuration
)
```

```
Public Sub ImportAttributeConfigurationBuffer (
    configuration As Byte()
)
```

Parameters

configuration

Type: [SystemByte](#)

The byte array that contains the attribute configuration to import.

Exceptions

Exception	Condition
ObjectDisposedException	The ImportAttributeConfigurationBuffer(Byte) method was called after the associated NIScope object was disposed.
NullReferenceException	The buffer or its underlying data have been disposed
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

You can export and import session attribute configurations only between devices with identical model numbers, channel counts, and onboard memory sizes and between NI-SCOPE sessions with the same number of initialized channels.

Note

You cannot call this method while the session is in a running state, such as while acquiring a signal.

When importing and exporting configurations between NI-SCOPE sessions that were both initialized with multiple instruments, the configurations of the exporting instruments are mapped to the importing instruments in the order you specify in the "resourceName" input to the [NIScope](#) constructor. For example, if your entry for "resourceName" is "PXI1Slot1,PXI1Slot2" for the exporting session and "PXI2Slot2,PXI2Slot3" for the importing session:

- The configuration exported from PXI1Slot1 is imported into PXI2Slot2.
- The configuration exported from PXI1Slot2 is imported into PXI2Slot3.

Note

NI-SCOPE will return an error if the total number of channels initialized for the exporting session is not equal to the total number of channels initialized for the importing session.

ScopeDriverUtilityImportAttributeConfigurationFile Method

Imports an attribute configuration to the session from the specified file.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ImportAttributeConfigurationFile(  
    string filePath  
)
```

```
Public Sub ImportAttributeConfigurationFile (
    filePath As String
)
```

Parameters

filePath

Type: [SystemString](#)

The absolute path to the file containing the attribute configuration to import. If you specify an empty or relative path, this method returns an error. The default file extension is .niscopeconfig.

Exceptions

Exception	Condition
ObjectDisposedException	The ImportAttributeConfigurationFile(String) method was called after the associated NIScope object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

You can export and import session attribute configurations only between devices with identical model numbers, channel counts, and onboard memory sizes and between NI-SCOPE sessions with the same number of initialized channels.

Note

You cannot call this method while the session is in a running state, such as while acquiring a signal.

When importing and exporting configurations between NI-SCOPE sessions that were both initialized with multiple instruments, the configurations of the exporting instruments are mapped to the importing instruments in the order you specify in the "resourceName" input to the [NIScope](#) constructor. For example, if your entry for "resourceName" is "PXI1Slot1,PXI1Slot2" for the exporting session and "PXI2Slot2,PXI2Slot3" for the importing session:

- The configuration exported from PXI1Slot1 is imported into PXI2Slot2.
- The configuration exported from PXI1Slot2 is imported into PXI2Slot3.

 Note

NI-SCOPE will return an error if the total number of channels initialized for the exporting session is not equal to the total number of channels initialized for the importing session.

ScopeDriverUtilityResetDevice Method

Performs a hard reset on the instrument.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ResetDevice()
```

```
Public Sub ResetDevice
```

Remarks

Resets the instrument to a known state. The method disables power generation, resets session properties to their default values, properties clears errors such as overtemperature and unexpected loss of auxiliary power, commits the session properties, and leaves the session in the Uncommitted state. This method also performs a hard reset on the instrument and driver software. This method has the same functionality as using reset in Measurement and Automation Explorer. This will also open the output relay on instruments that have an output relay.

ScopeDriverUtilitySelfTest Method

Performs a self-test on the NI-SCOPE instrument and returns the test result.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeSelfTestResult SelfTest()
```

```
Public Function SelfTest As ScopeSelfTestResult
```

Return Value

Type: [ScopeSelfTestResult](#)

An object of type SelfTestResult.

Remarks

This method performs a simple series of tests verifying that the NI-SCOPE instrument is powered on and responding.

Note

This method calls [Reset](#), which resets the software state.

ScopeEdgeTrigger Class

Represents the sub-object that contains methods and properties used to configure common properties for analog edge triggering.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeEdgeTrigger

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeEdgeTrigger : ScopeSubObject,
    IIVI_ScopeTriggerEdge
```

```
Public NotInheritable Class ScopeEdgeTrigger
    Inherits ScopeSubObject
    Implements IIVI_ScopeTriggerEdge
```

The ScopeEdgeTrigger type exposes the following members.

Properties

	Name	Description
	<u>Slope</u>	Specifies whether a rising or a falling edge triggers the digitizer.

Top

Methods

	Name	Description
	<u>Configure</u>	Configures common properties for analog edge triggering.
	<u>Equals</u>	Determines whether the specified object is equal to the current object. (Inherited from <u>Object</u> .)
	<u>GetHashCode</u>	Serves as the default hash function. (Inherited from <u>Object</u> .)
	<u>GetType</u>	Gets the <u>Type</u> of the current instance. (Inherited from <u>Object</u> .)

 ToString	Returns a string that represents the current object. (Inherited from Object .)
--	---

[Top](#)

Remarks

For more information, refer to the Trigger related topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeEdgeTriggerConfigure Method

Configures common properties for analog edge triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public void Configure(
    ScopeTriggerSource triggerSource,
    double triggerLevel,
    ScopeTriggerSlope triggerSlope,
```

```

    ScopeTriggerCoupling triggerCoupling,
    PrecisionTimeSpan triggerHoldoff,
    PrecisionTimeSpan triggerDelay
)

```

```

Public Sub Configure (
    triggerSource As ScopeTriggerSource,
    triggerLevel As Double,
    triggerSlope As ScopeTriggerSlope,
    triggerCoupling As ScopeTriggerCoupling,
    triggerHoldoff As PrecisionTimeSpan,
    triggerDelay As PrecisionTimeSpan
)

```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
 The trigger source. Refer to [ScopeTriggerSource](#) for defined values.

triggerLevel

Type: [SystemDouble](#)
 The voltage threshold for the trigger. Refer to [Level](#) for more information.

triggerSlope

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSlope](#)
 A value indicating whether you want a rising edge or a falling edge to trigger the digitizer. Refer to [ScopeTriggerSlope](#) for defined values.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)
 Applies coupling and filtering options to the trigger signal. Refer to [ScopeTriggerCoupling](#) for defined values.

triggerHoldoff

Type: [NationalInstrumentsPrecisionTimeSpan](#)
 The length of time the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger. Refer to [Holdoff](#) for more information.

triggerDelay

Type: [NationalInstrumentsPrecisionTimeSpan](#)
 The length of time the digitizer waits after receiving the trigger to start acquiring data. Refer to [Delay](#) for more information.

public void Configure(  
    ScopeTriggerSource triggerSource,  
    double triggerLevel,  
    ScopeTriggerSlope triggerSlope,  
    ScopeTriggerCoupling triggerCoupling,  
    PrecisionTimeSpan triggerHoldoff,  
    PrecisionTimeSpan triggerDelay  
)
```

```
Public Sub Configure (  
    triggerSource As ScopeTriggerSource,  
    triggerLevel As Double,  
    triggerSlope As ScopeTriggerSlope,  
    triggerCoupling As ScopeTriggerCoupling,  
    triggerHoldoff As PrecisionTimeSpan,  
    triggerDelay As PrecisionTimeSpan  
)
```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)

The trigger source. Refer to [ScopeTriggerSource](#) for defined values.

triggerLevel

Type: [SystemDouble](#)

The voltage threshold for the trigger. Refer to [Level](#) for more information.

triggerSlope

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSlope](#)

A value indicating whether you want a rising edge or a falling edge to trigger the digitizer. Refer to [ScopeTriggerSlope](#) for defined values.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)

Applies coupling and filtering options to the trigger signal. Refer to [ScopeTriggerCoupling](#) for defined values.

triggerHoldoff

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger. Refer to [Holdoff](#) for more information.

triggerDelay

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time the digitizer waits after receiving the trigger to start acquiring data. Refer to [Delay](#) for more information.

ScopeEndOfAcquisitionEventOutputTerminal Class

Represents the output terminal for [EndOfAcquisitionEventOutputTerminal](#).

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeEndOfAcquisitionEventOutputTerminal

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeEndOfAcquisitionEventOutputTerminal
```

```
Public NotInheritable Class ScopeEndOfAcquisitionEventOutputTerminal
```

The ScopeEndOfAcquisitionEventOutputTerminal type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.

 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of <code>ScopeEndOfAcquisitionEventOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeEndOfAcquisitionEventOutputTerminal)	Determines whether the current instance of <code>ScopeEndOfAcquisitionEventOutputTerminal</code> and the specified <code>ScopeEndOfAcquisitionEventOutputTerminal</code> object are equal.
 FromString 	Creates a <code>ScopeEndOfAcquisitionEventOutputTerminal</code> object from the specified <code>String</code> .
 GetHashCode	Gets the hash code for the current instance of <code>ScopeEndOfAcquisitionEventOutputTerminal</code> . (Overrides ObjectGetHashCode .)
 GetType	Gets the <code>Type</code> of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of <code>ScopeEndOfAcquisitionEventOutputTerminal</code> to <code>String</code> . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
	Equality	Checks whether two <code>ScopeEndOfAcquisitionEventOutputTerminal</code> object instances are equal.
	(String to <code>ScopeEndOfAcquisitionEventOutputTerminal</code>)	Converts a specified String to an equivalent <code>ScopeEndOfAcquisitionEventOutputTerminal</code> object.
	(<code>ScopeEndOfAcquisitionEventOutputTerminal</code> to String)	Converts a <code>ScopeEndOfAcquisitionEventOutputTerminal</code> object to an equivalent String .
	Inequality	Checks whether two <code>ScopeEndOfAcquisitionEventOutputTerminal</code> object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeEndOfAcquisitionEventOutputTerminal Properties

The [ScopeEndOfAcquisitionEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

ScopeEndOfAcquisitionEventOutputTerminal Properties

The [ScopeEndOfAcquisitionEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.

 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

ScopeEndOfAcquisitionEventOutputTerminalAux0Pfi0 Property

Gets the output terminal for AUX I/O connector 0 PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfAcquisitionEventOutputTerminal Aux0Pfi0 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi0 As  
ScopeEndOfAcquisitionEventOutputTerminal  
Get
```

Property Value

Type: [ScopeEndOfAcquisitionEventOutputTerminal](#)

A [ScopeEndOfAcquisitionEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_0".

ScopeEndOfAcquisitionEventOutputTerminal Methods

The [ScopeEndOfAcquisitionEventOutputTerminal](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeEndOfAcquisitionEventOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeEndOfAcquisitionEventOutputTerminal)	Determines whether the current instance of ScopeEndOfAcquisitionEventOutputTerminal and the specified ScopeEndOfAcquisitionEventOutputTerminal object are equal.

 FromString	Creates a ScopeEndOfAcquisitionEventOutputTerminal object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeEndOfAcquisitionEventOutputTerminal . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeEndOfAcquisitionEventOutputTerminal to String . (Overrides ObjectToString .)

[Top](#)[See Also](#)[Reference](#)[ScopeEndOfAcquisitionEventOutputTerminal Class](#)[NationalInstruments.ModularInstruments.NIScope Namespace](#)

ScopeEndOfAcquisitionEventOutputTerminalEquals

Determines whether the current instance of [ScopeEndOfAcquisitionEventOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeEndOfAcquisitionEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeEndOfAcquisitionEventOutputTerminalEquals Method
(ScopeEndOfAcquisitionEventOutputTerminal)

Determines whether the current instance of

[ScopeEndOfAcquisitionEventOutputTerminal](#) and the specified

[ScopeEndOfAcquisitionEventOutputTerminal](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(
    ScopeEndOfAcquisitionEventOutputTerminal source
)
```

```
Public Function Equals (
    source As ScopeEndOfAcquisitionEventOutputTerminal
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfAcquisitionEventOutputTerminal](#)
 Specifies the [ScopeEndOfAcquisitionEventOutputTerminal](#) object to compare to the current instance of [ScopeEndOfAcquisitionEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeEndOfAcquisitionEventOutputTerminalFromString Method

Creates a [ScopeEndOfAcquisitionEventOutputTerminal](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfAcquisitionEventOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeEndOfAcquisitionEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeEndOfAcquisitionEventOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeEndOfAcquisitionEventOutputTerminal](#)

Returns an object of type [ScopeEndOfAcquisitionEventOutputTerminal](#) representing the specified source [String](#).

ScopeEndOfAcquisitionEventOutputTerminal.GetHashCode Method

Gets the hash code for the current instance of [ScopeEndOfAcquisitionEventOutputTerminal](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeEndOfAcquisitionEventOutputTerminal](#).

ScopeEndOfAcquisitionEventOutputTerminal Operators and Type Conversions

The [ScopeEndOfAcquisitionEventOutputTerminal](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeEndOfAcquisitionEventOutputTerminal object instances are equal.
	(String to ScopeEndOfAcquisitionEventOutputTerminal)	Converts a specified String to an equivalent ScopeEndOfAcquisitionEventOutputTerminal object.

 	(ScopeEndOfAcquisitionEventOutputTerminal to String)	Converts a ScopeEndOfAcquisitionEventOutputTerminal object to an equivalent String .
 	Inequality	Checks whether two ScopeEndOfAcquisitionEventOutputTerminal object instances are not equal.

ScopeEndOfAcquisitionEventOutputTerminalEquality

Checks whether two [ScopeEndOfAcquisitionEventOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeEndOfAcquisitionEventOutputTerminal source1,
    ScopeEndOfAcquisitionEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeEndOfAcquisitionEventOutputTerminal,
    source2 As ScopeEndOfAcquisitionEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfAcquisitionEventOutputTerminal](#)
Specifies the first [ScopeEndOfAcquisitionEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfAcquisitionEventOutputTerminal](#)
Specifies the second [ScopeEndOfAcquisitionEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeEndOfAcquisitionEventOutputTerminalEquality Operator

Checks whether two [ScopeEndOfAcquisitionEventOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeEndOfAcquisitionEventOutputTerminal source1,
```

```
ScopeEndOfAcquisitionEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeEndOfAcquisitionEventOutputTerminal,
    source2 As ScopeEndOfAcquisitionEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfAcquisitionEventOutputTerminal](#)
 Specifies the first [ScopeEndOfAcquisitionEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfAcquisitionEventOutputTerminal](#)
 Specifies the second [ScopeEndOfAcquisitionEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeEndOfAcquisitionEventOutputTerminal Conversion Operators

Overload List

Name	Description
------	-------------

 	(String to ScopeEndOfAcquisitionEventOutputTerminal)	Converts a specified String to an equivalent ScopeEndOfAcquisitionEventOutputTerminal object.
 	(ScopeEndOfAcquisitionEventOutputTerminal to String)	Converts a ScopeEndOfAcquisitionEventOutputTerminal object to an equivalent String .

ScopeEndOfAcquisitionEventOutputTerminal Conversion (String to ScopeEndOfAcquisitionEventOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeEndOfAcquisitionEventOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeEndOfAcquisitionEventOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeEndOfAcquisitionEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeEndOfAcquisitionEventOutputTerminal](#) object.

Return Value

Type: [ScopeEndOfAcquisitionEventOutputTerminal](#)

Returns the [ScopeEndOfAcquisitionEventOutputTerminal](#) object representing the specified [String](#).

ScopeEndOfAcquisitionEventOutputTerminal Conversion (String to ScopeEndOfAcquisitionEventOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeEndOfAcquisitionEventOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeEndOfAcquisitionEventOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (
    source As String
) As ScopeEndOfAcquisitionEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeEndOfAcquisitionEventOutputTerminal](#) object.

Return Value

Type: [ScopeEndOfAcquisitionEventOutputTerminal](#)

Returns the [ScopeEndOfAcquisitionEventOutputTerminal](#) object representing the specified [String](#).

ScopeEndOfAcquisitionEventOutputTerminal Conversion
(ScopeEndOfAcquisitionEventOutputTerminal to String)

Converts a [ScopeEndOfAcquisitionEventOutputTerminal](#) object to an equivalent [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator string (  
    ScopeEndOfAcquisitionEventOutputTerminal source  
)
```

```
Public Shared Widening Operator CType (  
    source As ScopeEndOfAcquisitionEventOutputTerminal  
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfAcquisitionEventOutputTerminal](#)
Specifies the [ScopeEndOfAcquisitionEventOutputTerminal](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeEndOfAcquisitionEventOutputTerminal](#) object.

ScopeEndOfAcquisitionEventOutputTerminalInequality Operator

Checks whether two [ScopeEndOfAcquisitionEventOutputTerminal](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(
    ScopeEndOfAcquisitionEventOutputTerminal source1,
    ScopeEndOfAcquisitionEventOutputTerminal source2
)
```

```
Public Shared Operator <> (
    source1 As ScopeEndOfAcquisitionEventOutputTerminal,
    source2 As ScopeEndOfAcquisitionEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfAcquisitionEventOutputTerminal](#)
Specifies the first [ScopeEndOfAcquisitionEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfAcquisitionEventOutputTerminal](#)
Specifies the second [ScopeEndOfAcquisitionEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeEndOfRecordEventOutputTerminal Class

Represents the end of record event output terminal for [EndOfRecordEventOutputTerminal](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeEndOfRecordEventOutputTerminal
```

```
Public NotInheritable Class ScopeEndOfRecordEventOutputTerminal
```

The `ScopeEndOfRecordEventOutputTerminal` type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.

 Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
 Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
 Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
 Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
 Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
 ClockOut	Gets the output terminal for CLK OUT.
 NoSource	Gets the output terminal for no source.
 Pfi0	Gets the output terminal for PFI 0.
 Pfi1	Gets the output terminal for PFI 1.
 Pfi2	Gets the output terminal for PFI 2.
 PxiStar	Gets the output terminal for PXI STAR.
 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of <code>ScopeEndOfRecordEventOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeEndOfRecordEventOutputTerminal)	Determines whether the current instance of <code>ScopeEndOfRecordEventOutputTerminal</code> and the specified <code>ScopeEndOfRecordEventOutputTerminal</code> object are equal.

 FromString 	Creates a ScopeEndOfRecordEventOutputTerminal object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeEndOfRecordEventOutputTerminal . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeEndOfRecordEventOutputTerminal to String . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
 	Equality	Checks whether two ScopeEndOfRecordEventOutputTerminal object instances are equal.
 	(String to ScopeEndOfRecordEventOutputTerminal)	Converts a specified String to an equivalent ScopeEndOfRecordEventOutputTerminal object.
 	(ScopeEndOfRecordEventOutputTerminal to String)	Converts a ScopeEndOfRecordEventOutputTerminal object to an equivalent String .
 	Inequality	Checks whether two ScopeEndOfRecordEventOutputTerminal object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeEndOfRecordEventOutputTerminal Properties

The [ScopeEndOfRecordEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.

 Pfi2	Gets the output terminal for PFI 2.
 PxiStar	Gets the output terminal for PXI STAR.
 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

ScopeEndOfRecordEventOutputTerminalRtsi3 Property

Gets the output terminal for RTSI 3.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal Rtsi3 { get; }
```

```
Public Shared ReadOnly Property Rtsi3 As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_RTISI_3".

See Also

ScopeEndOfRecordEventOutputTerminalRtsi4 Property

Gets the output terminal for RTSI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal Rtsi4 { get; }
```

```
Public Shared ReadOnly Property Rtsi4 As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_RTSI_4".

ScopeEndOfRecordEventOutputTerminalRtsi5 Property

Gets the output terminal for RTSI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal Rtsi5 { get; }
```

```
Public Shared ReadOnly Property Rtsi5 As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_RTSI_5".

ScopeEndOfRecordEventOutputTerminalRtsi6 Property

Gets the output terminal for RTSI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal Rtsi6 { get; }
```

```
Public Shared ReadOnly Property Rtsi6 As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_RTISI_6".

ScopeEndOfRecordEventOutputTerminalRtsi7 Property

Gets the output terminal for RTSI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal Rtsi7 { get; }
```

```
Public Shared ReadOnly Property Rtsi7 As ScopeEndOfRecordEventOutputTerminal
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_RTISI_7".

ScopeEndOfRecordEventOutputTerminal Properties

The [ScopeEndOfRecordEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.

 ClockOut	Gets the output terminal for CLK OUT.
 NoSource	Gets the output terminal for no source.
 Pfi0	Gets the output terminal for PFI 0.
 Pfi1	Gets the output terminal for PFI 1.
 Pfi2	Gets the output terminal for PFI 2.
 PxiStar	Gets the output terminal for PXI STAR.
 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

ScopeEndOfRecordEventOutputTerminalClockOut Property

Gets the output terminal for CLK OUT.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal ClockOut { get; }
```

```
Public Shared ReadOnly Property ClockOut As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_CLK_OUT".

ScopeEndOfRecordEventOutputTerminalNoSource Property

Gets the output terminal for no source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

ScopeEndOfRecordEventOutputTerminalPfi0 Property

Gets the output terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_PFI_0".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_PFI_1".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_PFI_2".

Gets the output terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As ScopeEndOfRecordEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_PXI_STAR".

Gets the output terminal for RTSI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal Rtsi0 { get; }
```

```
Public Shared ReadOnly Property Rtsi0 As ScopeEndOfRecordEventOutputTerminal
    Get
```

Property Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

A [ScopeEndOfRecordEventOutputTerminal](#) representing the [String](#) "VAL_RTSI_0".

ScopeEndOfRecordEventOutputTerminal Methods

The [ScopeEndOfRecordEventOutputTerminal](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeEndOfRecordEventOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeEndOfRecordEventOutputTerminal)	Determines whether the current instance of ScopeEndOfRecordEventOutputTerminal and the specified ScopeEndOfRecordEventOutputTerminal object are equal.
 FromString 	Creates a ScopeEndOfRecordEventOutputTerminal object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeEndOfRecordEventOutputTerminal . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeEndOfRecordEventOutputTerminal to String . (Overrides ObjectToString .)

ScopeEndOfRecordEventOutputTerminalEquals Meth

Determines whether the current instance of [ScopeEndOfRecordEventOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (
    obj As Object
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeEndOfRecordEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

public bool Equals(  
    ScopeEndOfRecordEventOutputTerminal source  
)
```

```
Public Function Equals (  
    source As ScopeEndOfRecordEventOutputTerminal  
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal](#)
Specifies the [ScopeEndOfRecordEventOutputTerminal](#) object to compare to the current instance of [ScopeEndOfRecordEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeEndOfRecordEventOutputTerminalEquals Meth

Determines whether the current instance of [ScopeEndOfRecordEventOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (
    obj As Object
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeEndOfRecordEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeEndOfRecordEventOutputTerminalEquals Method
(ScopeEndOfRecordEventOutputTerminal)

Determines whether the current instance of [ScopeEndOfRecordEventOutputTerminal](#) and the specified [ScopeEndOfRecordEventOutputTerminal](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeEndOfRecordEventOutputTerminal source  
)
```

```
Public Function Equals (  
    source As ScopeEndOfRecordEventOutputTerminal  
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal](#)
Specifies the [ScopeEndOfRecordEventOutputTerminal](#) object to compare to the current instance of [ScopeEndOfRecordEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

[ScopeEndOfRecordEventOutputTerminalFromString Method](#)

Creates a [ScopeEndOfRecordEventOutputTerminal](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeEndOfRecordEventOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeEndOfRecordEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeEndOfRecordEventOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

Returns an object of type [ScopeEndOfRecordEventOutputTerminal](#) representing the specified source [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeEndOfRecordEventOutputTerminal](#).

ScopeEndOfRecordEventOutputTerminal Operators and Type Conversions

The [ScopeEndOfRecordEventOutputTerminal](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeEndOfRecordEventOutputTerminal object instances are equal.
	(String to ScopeEndOfRecordEventOutputTerminal)	Converts a specified String to an equivalent ScopeEndOfRecordEventOutputTerminal object.
	(ScopeEndOfRecordEventOutputTerminal to String)	Converts a ScopeEndOfRecordEventOutputTerminal object to an equivalent String .

Inequality

Checks whether two [ScopeEndOfRecordEventOutputTerminal](#) object instances are not equal.

ScopeEndOfRecordEventOutputTerminalEquality Operator

Checks whether two [ScopeEndOfRecordEventOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeEndOfRecordEventOutputTerminal source1,
    ScopeEndOfRecordEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeEndOfRecordEventOutputTerminal,
    source2 As ScopeEndOfRecordEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal](#)
Specifies the first [ScopeEndOfRecordEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal](#)
Specifies the second [ScopeEndOfRecordEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeEndOfRecordEventOutputTerminalEquality Operator

Checks whether two [ScopeEndOfRecordEventOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeEndOfRecordEventOutputTerminal source1,
```

```
ScopeEndOfRecordEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeEndOfRecordEventOutputTerminal,
    source2 As ScopeEndOfRecordEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal](#)
 Specifies the first [ScopeEndOfRecordEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal](#)
 Specifies the second [ScopeEndOfRecordEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeEndOfRecordEventOutputTerminal Conversion (String to ScopeEndOfRecordEventOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeEndOfRecordEventOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeEndOfRecordEventOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeEndOfRecordEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeEndOfRecordEventOutputTerminal](#) object.

Return Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

Returns the [ScopeEndOfRecordEventOutputTerminal](#) object representing the specified [String](#).

ScopeEndOfRecordEventOutputTerminal Conversion (String to ScopeEndOfRecordEventOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeEndOfRecordEventOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeEndOfRecordEventOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (
    source As String
) As ScopeEndOfRecordEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeEndOfRecordEventOutputTerminal](#) object.

Return Value

Type: [ScopeEndOfRecordEventOutputTerminal](#)

Returns the [ScopeEndOfRecordEventOutputTerminal](#) object representing the specified [String](#).

(ScopeEndOfRecordEventOutputTerminal to String)

Converts a [ScopeEndOfRecordEventOutputTerminal](#) object to an equivalent [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator string (  
    ScopeEndOfRecordEventOutputTerminal source  
)
```

```
Public Shared Widening Operator CType (  
    source As ScopeEndOfRecordEventOutputTerminal  
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal](#)
Specifies the [ScopeEndOfRecordEventOutputTerminal](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeEndOfRecordEventOutputTerminal](#) object.

ScopeEndOfRecordEventOutputTerminalInequality Operator

Checks whether two [ScopeEndOfRecordEventOutputTerminal](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(  
    ScopeEndOfRecordEventOutputTerminal source1,  
    ScopeEndOfRecordEventOutputTerminal source2  
)
```

```
Public Shared Operator <> (  
    source1 As ScopeEndOfRecordEventOutputTerminal,  
    source2 As ScopeEndOfRecordEventOutputTerminal  
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal](#)
Specifies the first [ScopeEndOfRecordEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeEndOfRecordEventOutputTerminal](#)
Specifies the second [ScopeEndOfRecordEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeErrorQueryResult Structure

Represents the the result of an error query.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public struct ScopeErrorQueryResult
```

```
Public Structure ScopeErrorQueryResult
```

The ScopeErrorQueryResult type exposes the following members.

Properties

	Name	Description
	Code	Gets the error code returned by the driver.
	Message	Gets the readable error string.

Top

Methods

Name	Description
------	-------------

 Equals(Object)	Determines whether the current instance of ScopeErrorQueryResult and the object that you specify are equal. (Overrides ValueTypeEquals(Object) .)
 Equals(ScopeErrorQueryResult)	Determines whether the current instance of ScopeErrorQueryResult and the ScopeErrorQueryResult object that you specify are equal.
 GetHashCode	Returns the hash code for the current instance of ScopeErrorQueryResult. (Overrides ValueTypeGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns the fully qualified type name of this instance. (Inherited from ValueType .)

[Top](#)

Operators

	Name	Description
 Equality	Equality	Checks whether the two instances of ScopeErrorQueryResult are equal.
 Inequality	Inequality	Checks whether the two instances of ScopeErrorQueryResult are unequal.

[Top](#)

Remarks

For more information, refer to [NI High-Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeErrorQueryResultEquality Operator

Checks whether the two instances of [ScopeErrorQueryResult](#) are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeErrorQueryResult result1,
    ScopeErrorQueryResult result2
)
```

```
Public Shared Operator = (
    result1 As ScopeErrorQueryResult,
    result2 As ScopeErrorQueryResult
) As Boolean
```

Parameters

result1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeErrorQueryResult](#)
A [ScopeErrorQueryResult](#) object.

result2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeErrorQueryResult](#)
A [ScopeErrorQueryResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeErrorQueryResultEquality Operator

Checks whether the two instances of [ScopeErrorQueryResult](#) are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeErrorQueryResult result1,
    ScopeErrorQueryResult result2
)
```

```
Public Shared Operator = (
    result1 As ScopeErrorQueryResult,
    result2 As ScopeErrorQueryResult
) As Boolean
```

Parameters

result1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeErrorQueryResult](#)
A [ScopeErrorQueryResult](#) object.

result2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeErrorQueryResult](#)
A [ScopeErrorQueryResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeErrorQueryResultInequality Operator

Checks whether the two instances of [ScopeErrorQueryResult](#) are unequal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(
    ScopeErrorQueryResult result1,
    ScopeErrorQueryResult result2
)
```

```
Public Shared Operator <> (
    result1 As ScopeErrorQueryResult,
    result2 As ScopeErrorQueryResult
) As Boolean
```

Parameters

result1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeErrorQueryResult](#)
A [ScopeErrorQueryResult](#) object.

result2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeErrorQueryResult](#)
A [ScopeErrorQueryResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are unequal; otherwise, .

ScopeExportedSignals Class

Represents the ScopeExportedSignals sub-objects that are used to configure the driver to generate a signal that other instruments can detect when configuring for digital triggering or sharing clocks.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeExportedSignals](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public sealed class ScopeExportedSignals : ScopeSubObject
```

```
Public NotInheritable Class ScopeExportedSignals
    Inherits ScopeSubObject
```

The ScopeExportedSignals type exposes the following members.

Properties

Name	Description
 AdvanceTriggerOutputTerminal	Gets or sets the destination terminal to which advanceTrigger is exported.
 AdvanceTriggerTerminalName	Specifies the terminal name for the output trigger signal of the Advance Trigger. When the Advance Trigger is received, the digitizer begins acquiring samples for the Nth record.
 EndOfAcquisitionEventOutputTerminal	Gets or sets the destination for the end of acquisition event.
 EndOfAcquisitionEventTerminalName	Specifies the terminal name for the End of Acquisition Event. When this event is asserted, the digitizer has completed sampling for all records.
 EndOfRecordEventOutputTerminal	Gets or sets the destination for the end of record event.
 EndOfRecordEventTerminalName	Specifies the terminal name for the End of Record Event. When this event is asserted, the digitizer has completed sampling for the current record.
 FiveVoltOutputTerminal	Gets or sets the destination for the exported 5 Volt signal.
 ReadyForAdvanceEventOutputTerminal	Gets or sets the destination for the Ready for Advance trigger event. When this event is asserted, the digitizer is ready to receive an advance trigger.
 ReadyForAdvanceEventTerminalName	Specifies the terminal name for the Ready for Advance Event. When this event is asserted, the digitizer is ready to receive an advance trigger.
 ReadyForReferenceEventOutputTerminal	Gets or sets the destination for the Ready for Reference trigger event. When this event is asserted, the digitizer is ready to receive a reference trigger.

 ReadyForReferenceEventTerminalName	Specifies the terminal name for the Ready for Reference Event. When this event is asserted, the digitizer is ready to receive a reference trigger.
 ReadyForStartEventOutputTerminal	Gets or sets the destination for the Ready for Start trigger event. When this event is asserted, the digitizer is ready to receive a start trigger.
 ReadyForStartEventTerminalName	Specifies the terminal name for the Ready for Start Event. When this event is asserted, the digitizer is ready to receive a start trigger.
 ReferenceClockOutputTerminal	Gets or sets the output terminal to which the reference clock is exported.
 ReferenceTriggerOutputTerminal	Gets or sets the destination to which the reference (Stop) trigger is exported.
 ReferenceTriggerTerminalName	Specifies the terminal name for the output trigger signal of the Reference Trigger.
 SampleClockOutputTerminal	Gets or sets the sample clock for the specified terminal.
 StartTriggerOutputTerminal	Gets or sets the destination to which the start trigger is exported.
 StartTriggerTerminalName	Specifies the terminal name for the output trigger signal of the Start Trigger. When the Start Trigger is received, the digitizer begins acquiring samples.

[Top](#)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the `niScope_ExportSignal` topic in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeExportedSignals Properties

The [ScopeExportedSignals](#) type exposes the following members.

Properties

Name	Description
 AdvanceTriggerOutputTerminal	Gets or sets the destination terminal to which <code>advanceTrigger</code> is exported.
 AdvanceTriggerTerminalName	Specifies the terminal name for the output trigger signal of the Advance Trigger. When the Advance Trigger is received, the digitizer begins acquiring samples for the Nth record.
 EndOfAcquisitionEventOutputTerminal	Gets or sets the destination for the end of acquisition event.

 EndOfAcquisitionEventTerminalName	Specifies the terminal name for the End of Acquisition Event. When this event is asserted, the digitizer has completed sampling for all records.
 EndOfRecordEventOutputTerminal	Gets or sets the destination for the end of record event.
 EndOfRecordEventTerminalName	Specifies the terminal name for the End of Record Event. When this event is asserted, the digitizer has completed sampling for the current record.
 FiveVoltOutputTerminal	Gets or sets the destination for the exported 5 Volt signal.
 ReadyForAdvanceEventOutputTerminal	Gets or sets the destination for the Ready for Advance trigger event. When this event is asserted, the digitizer is ready to receive an advance trigger.
 ReadyForAdvanceEventTerminalName	Specifies the terminal name for the Ready for Advance Event. When this event is asserted, the digitizer is ready to receive an advance trigger.
 ReadyForReferenceEventOutputTerminal	Gets or sets the destination for the Ready for Reference trigger event. When this event is asserted, the digitizer is ready to receive a reference trigger.
 ReadyForReferenceEventTerminalName	Specifies the terminal name for the Ready for Reference Event. When this event is asserted, the digitizer is ready to receive a reference trigger.
 ReadyForStartEventOutputTerminal	Gets or sets the destination for the Ready for Start trigger event. When this event is asserted, the digitizer is ready to receive a start trigger.
 ReadyForStartEventTerminalName	Specifies the terminal name for the Ready for Start Event. When this event is asserted, the digitizer is ready to receive a start trigger.
 ReferenceClockOutputTerminal	Gets or sets the output terminal to which the reference clock is exported.
 ReferenceTriggerOutputTerminal	Gets or sets the destination to which the reference (Stop) trigger is exported.
 ReferenceTriggerTerminalName	Specifies the terminal name for the output trigger signal of the Reference Trigger.
 SampleClockOutputTerminal	Gets or sets the sample clock for the specified terminal.

 StartTriggerOutputTerminal	Gets or sets the destination to which the start trigger is exported.
 StartTriggerTerminalName	Specifies the terminal name for the output trigger signal of the Start Trigger. When the Start Trigger is received, the digitizer begins acquiring samples.

ScopeExportedSignalsAdvanceTriggerOutputTerminal

Gets or sets the destination terminal to which advanceTrigger is exported.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeAdvanceTriggerExportedOutputTerminal AdvanceTriggerOutputTerminal
{ get; set; }
```

```
Public Property AdvanceTriggerOutputTerminal As
ScopeAdvanceTriggerExportedOutputTerminal
    Get
    Set
```

Property Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

An object of type [ScopeAdvanceTriggerExportedOutputTerminal](#).

ScopeExportedSignals Properties

The [ScopeExportedSignals](#) type exposes the following members.

Properties

Name	Description
 AdvanceTriggerOutputTerminal	Gets or sets the destination terminal to which advanceTrigger is exported.
 AdvanceTriggerTerminalName	Specifies the terminal name for the output trigger signal of the Advance Trigger. When the Advance Trigger is received, the digitizer begins acquiring samples for the Nth record.
 EndOfAcquisitionEventOutputTerminal	Gets or sets the destination for the end of acquisition event.
 EndOfAcquisitionEventTerminalName	Specifies the terminal name for the End of Acquisition Event. When this event is asserted, the digitizer has completed sampling for all records.
 EndOfRecordEventOutputTerminal	Gets or sets the destination for the end of record event.
 EndOfRecordEventTerminalName	Specifies the terminal name for the End of Record Event. When this event is asserted, the digitizer has completed sampling for the current record.
 FiveVoltOutputTerminal	Gets or sets the destination for the exported 5 Volt signal.

 ReadyForAdvanceEventOutputTerminal	Gets or sets the destination for the Ready for Advance trigger event. When this event is asserted, the digitizer is ready to receive an advance trigger.
 ReadyForAdvanceEventTerminalName	Specifies the terminal name for the Ready for Advance Event. When this event is asserted, the digitizer is ready to receive an advance trigger.
 ReadyForReferenceEventOutputTerminal	Gets or sets the destination for the Ready for Reference trigger event. When this event is asserted, the digitizer is ready to receive a reference trigger.
 ReadyForReferenceEventTerminalName	Specifies the terminal name for the Ready for Reference Event. When this event is asserted, the digitizer is ready to receive a reference trigger.
 ReadyForStartEventOutputTerminal	Gets or sets the destination for the Ready for Start trigger event. When this event is asserted, the digitizer is ready to receive a start trigger.
 ReadyForStartEventTerminalName	Specifies the terminal name for the Ready for Start Event. When this event is asserted, the digitizer is ready to receive a start trigger.
 ReferenceClockOutputTerminal	Gets or sets the output terminal to which the reference clock is exported.
 ReferenceTriggerOutputTerminal	Gets or sets the destination to which the reference (Stop) trigger is exported.
 ReferenceTriggerTerminalName	Specifies the terminal name for the output trigger signal of the Reference Trigger.
 SampleClockOutputTerminal	Gets or sets the sample clock for the specified terminal.
 StartTriggerOutputTerminal	Gets or sets the destination to which the start trigger is exported.
 StartTriggerTerminalName	Specifies the terminal name for the output trigger signal of the Start Trigger. When the Start Trigger is received, the digitizer begins acquiring samples.

ScopeExportedSignalsAdvanceTriggerOutputTerminal

Gets or sets the destination terminal to which advanceTrigger is exported.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeAdvanceTriggerExportedOutputTerminal AdvanceTriggerOutputTerminal
{ get; set; }
```

```
Public Property AdvanceTriggerOutputTerminal As
ScopeAdvanceTriggerExportedOutputTerminal
    Get
    Set
```

Property Value

Type: [ScopeAdvanceTriggerExportedOutputTerminal](#)

An object of type [ScopeAdvanceTriggerExportedOutputTerminal](#).

ScopeExportedSignalsAdvanceTriggerTerminalName Property

Specifies the terminal name for the output trigger signal of the Advance Trigger. When the Advance Trigger is received, the digitizer begins acquiring samples for the Nth record.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string AdvanceTriggerTerminalName { get; }
```

```
Public ReadOnly Property AdvanceTriggerTerminalName As String  
    Get
```

Property Value

Type: [String](#)

A string containing the fully qualified name for the Advance Trigger Terminal.

ScopeExportedSignals Methods

The [ScopeExportedSignals](#) type exposes the following members.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeExternalCalibration Class

Represents methods used to externally calibrate digitizer.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeExternalCalibration

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeExternalCalibration : ScopeSubObject
```

```
Public NotInheritable Class ScopeExternalCalibration
    Inherits ScopeSubObject
```

The ScopeExternalCalibration type exposes the following members.

Properties

	Name	Description
	ExternalCalibrationDate	Gets the last external calibration date.
	ExternalCalibrationTemperature	Gets the onboard temperature of the digitizer at the time of external calibration.

[Top](#)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Calibration topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeFetchRelativeTo Enumeration

Specifies the position to start fetching within one record.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeFetchRelativeTo
```

```
Public Enumeration ScopeFetchRelativeTo
```

Members

Member name	Value	Description
Start	482	Fetches data starting at the first point sampled by the digitizer. For devices that support continuous acquisition, you must fetch relative to Now or relative to Start before the trigger occurs. The number of points available when fetching relative to start may be extremely large because there may be an infinite number of pretrigger samples if the trigger never occurs. Furthermore, the pretrigger points are sampled into a circular buffer, so the data at the start may be overwritten. If the data is no longer available for fetching, the fetch method throws an exception.
Trigger	483	Starts fetching at the first posttrigger sample, which is useful for fetching a small number of points near the trigger.
Pretrigger	477	Fetches data relative to the first pretrigger point requested.
Now	481	Starts fetching data at the last sample acquired. Therefore, you must use a negative offset when fetching relative to now. This option is useful for configuring an infinite acquisition (one that never triggers) and occasionally fetching the most recent data.
ReadPointer	388	Specifies the read pointer value. When you initiate a new acquisition, the read pointer is set to 0. At this point, fetching relative to the read pointer is equivalent to fetching relative to start. After every fetch, the read pointer is incremented to be the sample after the last sample retrieved. Therefore, you can repeatedly fetch relative to the read pointer for a continuous acquisition program.

NationalInstruments.ModularInstruments.NIScopeScopeFiveVoltsOutOutputTerminal

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeFiveVoltsOutOutputTerminal
```

```
Public NotInheritable Class ScopeFiveVoltsOutOutputTerminal
```

The ScopeFiveVoltsOutOutputTerminal type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.

	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of <code>ScopeFiveVoltsOutOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeFiveVoltsOutOutputTerminal)	Determines whether the current instance of <code>ScopeFiveVoltsOutOutputTerminal</code> and the specified <code>ScopeFiveVoltsOutOutputTerminal</code> object are equal.
 	FromString	Creates a <code>ScopeFiveVoltsOutOutputTerminal</code> object from the specified String .
	GetHashCode	Gets the hash code for the current instance of <code>ScopeFiveVoltsOutOutputTerminal</code> . (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of <code>ScopeFiveVoltsOutOutputTerminal</code> to String . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
	Equality	Checks whether two <code>ScopeFiveVoltsOutOutputTerminal</code> object instances are equal.
	(String to ScopeFiveVoltsOutOutputTerminal)	Converts a specified <code>String</code> to an equivalent <code>ScopeFiveVoltsOutOutputTerminal</code> object.
	(ScopeFiveVoltsOutOutputTerminal to String)	Converts a <code>ScopeFiveVoltsOutOutputTerminal</code> object to an equivalent <code>String</code> .
	Inequality	Checks whether two <code>ScopeFiveVoltsOutOutputTerminal</code> object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeFiveVoltsOutOutputTerminal Properties

The [ScopeFiveVoltsOutOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	<u>Aux0Pfi0</u>	Gets the output terminal for AUX I/O connector 0 PFI 0.
	<u>Aux0Pfi1</u>	Gets the output terminal for AUX I/O connector 0 PFI 1.
	<u>Aux0Pfi2</u>	Gets the output terminal for AUX I/O connector 0 PFI 2.
	<u>Aux0Pfi3</u>	Gets the output terminal for AUX I/O connector 0 PFI 3.
	<u>Aux0Pfi4</u>	Gets the output terminal for AUX I/O connector 0 PFI 4.
	<u>Aux0Pfi5</u>	Gets the output terminal for AUX I/O connector 0 PFI 5.
	<u>Aux0Pfi6</u>	Gets the output terminal for AUX I/O connector 0 PFI 6.
	<u>Aux0Pfi7</u>	Gets the output terminal for AUX I/O connector 0 PFI 7.
	<u>ClockOut</u>	Gets the output terminal for CLK OUT.
	<u>NoSource</u>	Gets the output terminal for no source.
	<u>Pfi0</u>	Gets the output terminal for PFI 0.
	<u>Pfi1</u>	Gets the output terminal for PFI 1.
	<u>Pfi2</u>	Gets the output terminal for PFI 2.
	<u>PxiStar</u>	Gets the output terminal for PXI STAR.
	<u>Rtsi0</u>	Gets the output terminal for RTSI 0.
	<u>Rtsi1</u>	Gets the output terminal for RTSI 1.
	<u>Rtsi2</u>	Gets the output terminal for RTSI 2.
	<u>Rtsi3</u>	Gets the output terminal for RTSI 3.
	<u>Rtsi4</u>	Gets the output terminal for RTSI 4.
	<u>Rtsi5</u>	Gets the output terminal for RTSI 5.
	<u>Rtsi6</u>	Gets the output terminal for RTSI 6.
	<u>Rtsi7</u>	Gets the output terminal for RTSI 7.

Gets the output terminal for AUX I/O connector 0 PFI 3.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeFiveVoltsOutOutputTerminal Aux0Pfi3 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi3 As ScopeFiveVoltsOutOutputTerminal  
    Get
```

Property Value

Type: [ScopeFiveVoltsOutOutputTerminal](#)

A [ScopeFiveVoltsOutOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_3".

Gets the output terminal for no source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeFiveVoltsOutOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As ScopeFiveVoltsOutOutputTerminal
    Get
```

Property Value

Type: [ScopeFiveVoltsOutOutputTerminal](#)

A [ScopeFiveVoltsOutOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeFiveVoltsOutOutputTerminal RtSi0 { get; }
```

```
Public Shared ReadOnly Property Rtsi0 As ScopeFiveVoltsOutOutputTerminal
    Get
```

Property Value

Type: [ScopeFiveVoltsOutOutputTerminal](#)

A [ScopeFiveVoltsOutOutputTerminal](#) representing the [String](#) "VAL_RTISI_0".

ScopeFiveVoltsOutOutputTerminal Properties

The [ScopeFiveVoltsOutOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.

 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

ScopeFiveVoltsOutOutputTerminalAux0Pfi1 Property

Gets the output terminal for AUX I/O connector 0 PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeFiveVoltsOutOutputTerminal Aux0Pfi1 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi1 As ScopeFiveVoltsOutOutputTerminal  
    Get
```

Property Value

Type: [ScopeFiveVoltsOutOutputTerminal](#)

A [ScopeFiveVoltsOutOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_1".

ScopeFiveVoltsOutOutputTerminalAux0Pfi2 Property

Gets the output terminal for AUX I/O connector 0 PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeFiveVoltsOutOutputTerminal Aux0Pfi2 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi2 As ScopeFiveVoltsOutOutputTerminal
    Get
```

Property Value

Type: [ScopeFiveVoltsOutOutputTerminal](#)

A [ScopeFiveVoltsOutOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_2".

ScopeFiveVoltsOutOutputTerminal Methods

The [ScopeFiveVoltsOutOutputTerminal](#) type exposes the following members.

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeFiveVoltsOutOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeFiveVoltsOutOutputTerminal)	Determines whether the current instance of ScopeFiveVoltsOutOutputTerminal and the specified ScopeFiveVoltsOutOutputTerminal object are equal.
 	FromString	Creates a ScopeFiveVoltsOutOutputTerminal object from the specified String .
	GetHashCode	Gets the hash code for the current instance of ScopeFiveVoltsOutOutputTerminal . (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of ScopeFiveVoltsOutOutputTerminal to String . (Overrides ObjectToString .)

[Top](#)[See Also](#)[Reference](#)[ScopeFiveVoltsOutOutputTerminal Class](#)[NationalInstruments.ModularInstruments.NIScope Namespace](#)

ScopeFiveVoltsOutOutputTerminalEquals Method

Overload List

	Name	Description
=	Equals(Object)	Determines whether the current instance of ScopeFiveVoltsOutOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
=	Equals(ScopeFiveVoltsOutOutputTerminal)	Determines whether the current instance of ScopeFiveVoltsOutOutputTerminal and the specified ScopeFiveVoltsOutOutputTerminal object are equal.

[Top](#)[See Also](#)[Reference](#)[ScopeFiveVoltsOutOutputTerminal Class](#)[NationalInstruments.ModularInstruments.NIScope Namespace](#)

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeFiveVoltsOutOutputTerminalEquals Method (Object)

Determines whether the current instance of [ScopeFiveVoltsOutOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeFiveVoltsOutOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

ScopeFiveVoltsOutOutputTerminalFromString Method

Creates a [ScopeFiveVoltsOutOutputTerminal](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeFiveVoltsOutOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (
    source As String
) As ScopeFiveVoltsOutOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeFiveVoltsOutOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeFiveVoltsOutOutputTerminal](#)

Returns an object of type [ScopeFiveVoltsOutOutputTerminal](#) representing the specified source [String](#).

ScopeFiveVoltsOutOutputTerminal Operators and Type Conversions

The [ScopeFiveVoltsOutOutputTerminal](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeFiveVoltsOutOutputTerminal object instances are equal.
	(String to ScopeFiveVoltsOutOutputTerminal)	Converts a specified String to an equivalent ScopeFiveVoltsOutOutputTerminal object.
	(ScopeFiveVoltsOutOutputTerminal to String)	Converts a ScopeFiveVoltsOutOutputTerminal object to an equivalent String .
	Inequality	Checks whether two ScopeFiveVoltsOutOutputTerminal object instances are not equal.

ScopeFiveVoltsOutOutputTerminalEquality Operator

Checks whether two [ScopeFiveVoltsOutOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeFiveVoltsOutOutputTerminal source1,
    ScopeFiveVoltsOutOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeFiveVoltsOutOutputTerminal,
    source2 As ScopeFiveVoltsOutOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeFiveVoltsOutOutputTerminal](#)
Specifies the first [ScopeFiveVoltsOutOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeFiveVoltsOutOutputTerminal](#)
Specifies the second [ScopeFiveVoltsOutOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeFiveVoltsOutOutputTerminalEquality Operator

Checks whether two [ScopeFiveVoltsOutOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeFiveVoltsOutOutputTerminal source1,
    ScopeFiveVoltsOutOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeFiveVoltsOutOutputTerminal,
    source2 As ScopeFiveVoltsOutOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeFiveVoltsOutOutputTerminal](#)
Specifies the first [ScopeFiveVoltsOutOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeFiveVoltsOutOutputTerminal](#)
Specifies the second [ScopeFiveVoltsOutOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeFiveVoltsOutOutputTerminal Conversion (String to ScopeFiveVoltsOutOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeFiveVoltsOutOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeFiveVoltsOutOutputTerminal (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeFiveVoltsOutOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeFiveVoltsOutOutputTerminal](#) object.

Return Value

Type: [ScopeFiveVoltsOutOutputTerminal](#)

Returns the [ScopeFiveVoltsOutOutputTerminal](#) object representing the specified [String](#).

ScopeFiveVoltsOutOutputTerminal Conversion (String to ScopeFiveVoltsOutOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeFiveVoltsOutOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeFiveVoltsOutOutputTerminal (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeFiveVoltsOutOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeFiveVoltsOutOutputTerminal](#) object.

Return Value

Type: [ScopeFiveVoltsOutOutputTerminal](#)

Returns the [ScopeFiveVoltsOutOutputTerminal](#) object representing the specified [String](#).

ScopeFiveVoltsOutOutputTerminal Conversion
(ScopeFiveVoltsOutOutputTerminal to String)

Converts a [ScopeFiveVoltsOutOutputTerminal](#) object to an equivalent [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#/VB

```
public static implicit operator string (  
    ScopeFiveVoltsOutOutputTerminal source  
)
```

```
Public Shared Widening Operator CType (  
    source As ScopeFiveVoltsOutOutputTerminal  
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeFiveVoltsOutOutputTerminal](#)
Specifies the [ScopeFiveVoltsOutOutputTerminal](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeFiveVoltsOutOutputTerminal](#) object.

ScopeFiveVoltsOutOutputTerminalInequality Operator

Checks whether two [ScopeFiveVoltsOutOutputTerminal](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(  
    ScopeFiveVoltsOutOutputTerminal source1,  
    ScopeFiveVoltsOutOutputTerminal source2  
)
```

```
Public Shared Operator <> (
    source1 As ScopeFiveVoltsOutOutputTerminal,
    source2 As ScopeFiveVoltsOutOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeFiveVoltsOutOutputTerminal](#)
 Specifies the first [ScopeFiveVoltsOutOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeFiveVoltsOutOutputTerminal](#)
 Specifies the second [ScopeFiveVoltsOutOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeFlexFirAntiAliasFilterType Enumeration

Specifies the type of filter to achieve desired filtering characteristics. The NI 5922 flexible-resolution digitizer uses an onboard FIR lowpass antialias filter.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeFlexFirAntiAliasFilterType
```

```
Public Enumeration ScopeFlexFirAntiAliasFilterType
```

Members

Member name	Value	Description
Tap48Standard	0	<p>This filter is optimized for alias protection and frequency-domain flatness.</p> <ul style="list-style-type: none"> ▪ Alias protection: ranges from 80 dB to 100 dB depending on sample rate ▪ Settling time: within 14 samples from a 50% vertical trigger point ▪ Cutoff frequency: 0.43 x sample rate ▪ Flatness: ripple ranges from 0.005 dB to 0.120 dB depending on selected sample rate. Refer to the NI PXI/PCI-5922 Specifications for more information. ▪ Rise time: approximately $0.75 / (\text{sample rate})$
Tap48Hanning	1	<p>This filter is optimized for the lowest possible bandwidth for a 48-tap filter and maximizes the signal-to-noise ratio (SNR).</p> <ul style="list-style-type: none"> ▪ Settling time: within 14 samples from a 50% vertical trigger point ▪ Cutoff frequency: 0.030 x sample rate ▪ Flatness: 0 to -3dB within cutoff frequency ▪ Rise time: $11.6 / (\text{sample rate})$
Tap16Hanning	2	<p>This filter is optimized for the lowest possible bandwidth for a 16-tap filter and maximizes the SNR.</p> <ul style="list-style-type: none"> ▪ Settling time: 6 samples from a 50% vertical trigger point. ▪ Cutoff frequency: 0.08 x sample rate ▪ Flatness: 0 to -3dB within cutoff frequency

		<ul style="list-style-type: none"> ▪ Rise time: 7.7 / (sample rate)
Tap8Hanning	3	<p>This filter is optimized for the lowest possible bandwidth for an 8-tap filter and maximizes the SNR.</p> <ul style="list-style-type: none"> ▪ Settling time: 4 samples from a 50% vertical trigger point ▪ Cutoff frequency: 0.15 x sample rate ▪ Flatness: 0 to -3 dB within cutoff frequency ▪ Rise time: 3.9 / (sample rate)

ScopeFractionalResample Class

Provides configuration options for fractional resampling.

Inheritance Hierarchy

SystemObject

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeFractionalResample

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeFractionalResample : ScopeSubObject
```

```
Public NotInheritable Class ScopeFractionalResample
    Inherits ScopeSubObject
```

The ScopeFractionalResample type exposes the following members.

Properties

Name	Description
 Enabled	Gets or sets whether fractional resampling is enabled on the instrument.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

You can use this class to resample the input waveform to the desired sample rate. By using the fractional resampling stage of the onboard signal processing (OSP) block, you can move the fractional resampling processing to hardware without using an external clock.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeFractionalResampleEnabled Property

Gets or sets whether fractional resampling is enabled on the instrument.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Enabled { get; set; }
```

```
Public Property Enabled As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

The default value is .

Remarks

This property is valid only with high-speed digitizers that support onboard signal processing (OSP), such as the NI 5142. On an instrument that does not support OSP, accessing this property results in a `ModularInstrumentsException`.

ScopeGlitchTrigger Class

Represents the sub-object that contains methods and properties used to configure common properties for glitch triggering.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeGlitchTrigger

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeGlitchTrigger : ScopeSubObject,
    IIVI_ScopeTriggerGlitch
```

```
Public NotInheritable Class ScopeGlitchTrigger
    Inherits ScopeSubObject
    Implements IIVI_ScopeTriggerGlitch
```

The ScopeGlitchTrigger type exposes the following members.

Properties

Name	Description
 GlitchCondition	Gets or sets the glitch condition you want the digitizer to use for glitch triggering.
 GlitchPolarity	Gets or sets the glitch polarity you want the digitizer to use for glitch triggering.
 GlitchWidth	Gets or sets the glitch width you want the digitizer to use for glitch triggering.

Top

Methods

Name	Description
 Configure(String, Double, PrecisionTimeSpan, Polarity, GlitchCondition)	Configures common properties for analog glitch triggering.
 Configure(ScopeTriggerSource, Double, Double, ScopeTriggerPolarity, ScopeGlitchTriggerCondition, ScopeTriggerCoupling, PrecisionTimeSpan, PrecisionTimeSpan)	Configures common properties for analog glitch triggering.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)

 GetType	Gets the Type of the current instance. (Inherited from Object .)

ScopeGlitchTriggerGlitchCondition Property

Gets or sets the glitch condition you want the digitizer to use for glitch triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public ScopeGlitchTriggerCondition GlitchCondition { get; set; }
```

```
Public Property GlitchCondition As ScopeGlitchTriggerCondition
    Get
    Set
```

Property Value

Type: [ScopeGlitchTriggerCondition](#)

The glitch condition you want the digitizer to use for glitch triggering.

Exceptions

Exception	Condition
-----------	-----------

ObjectDisposedException	GlitchCondition was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The value for glitch condition was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer triggers either when the glitch width is great than or less than the set width.

ScopeGlitchTrigger Methods

The [ScopeGlitchTrigger](#) type exposes the following members.

Methods

Name	Description
 Configure(String, Double, PrecisionTimeSpan, Polarity, GlitchCondition)	Configures common properties for analog glitch triggering.
 Configure(ScopeTriggerSource, Double, Double, ScopeTriggerPolarity, ScopeGlitchTriggerCondition, ScopeTriggerCoupling, PrecisionTimeSpan, PrecisionTimeSpan)	Configures common properties for analog glitch triggering.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeGlitchTriggerConfigure Method (String, Double, PrecisionTimeSpan, Polarity, GlitchCondition)

Configures common properties for analog glitch triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void Configure(
    string source,
    double level,
    PrecisionTimeSpan width,
    Polarity polarity,
    GlitchCondition condition
)
```

```
Public Sub Configure (
    source As String,
    level As Double,
    width As PrecisionTimeSpan,
    polarity As Polarity,
    condition As GlitchCondition
)
```

Parameters

source

Type: [SystemString](#)

The trigger source.

level

Type: [SystemDouble](#)

A value indicating the voltage level at which the glitch will trigger.

width

Type: [Ivi.DriverPrecisionTimeSpan](#)

A value indicating the width at which the glitch will trigger.

polarity

Type: [Ivi.ScopePolarity](#)

The polarity that the glitch will trigger, either positive, negative, or either.

condition

Type: Ivi.ScopeGlitchCondition

The condition for the glitch to trigger being greater than or less than.

Implements

Ivi.ScopeTriggerGlitchConfigure(String, Double, PrecisionTimeSpan, Polarity, GlitchCondition)

Exceptions

Exception	Condition
ObjectDisposedException	Configure(String, Double, PrecisionTimeSpan, Polarity, GlitchCondition) was called or accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	<p>The value for width was invalid.</p> <p>- or -</p> <p>The value for polarity was invalid.</p> <p>- or -</p> <p>The value for condition was invalid.</p> <p>- or -</p> <p>The underlying NI-SCOPE driver returned an error.</p>

ScopeGlitchTriggerConfigure Method (ScopeTriggerSource, Double, Double, ScopeTriggerPolarity, ScopeGlitchTriggerCondition, ScopeTriggerCoupling, PrecisionTimeSpan, PrecisionTimeSpan)

Configures common properties for analog glitch triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void Configure(  
    ScopeTriggerSource triggerSource,  
    double level,  
    double glitchWidth,  
    ScopeTriggerPolarity triggerPolarity,  
    ScopeGlitchTriggerCondition glitchCondition,  
    ScopeTriggerCoupling triggerCoupling,  
    PrecisionTimeSpan triggerHoldoff,  
    PrecisionTimeSpan triggerDelay  
)
```

```
Public Sub Configure (  
    triggerSource As ScopeTriggerSource,  
    level As Double,
```

```

    glitchWidth As Double,
    triggerPolarity As ScopeTriggerPolarity,
    glitchCondition As ScopeGlitchTriggerCondition,
    triggerCoupling As ScopeTriggerCoupling,
    triggerHoldoff As PrecisionTimeSpan,
    triggerDelay As PrecisionTimeSpan
)

```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)

The trigger source.

level

Type: [SystemDouble](#)

A value indicating the voltage level at which the glitch will trigger.

glitchWidth

Type: [SystemDouble](#)

A value indicating the width at which the glitch will trigger.

triggerPolarity

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerPolarity](#)

The polarity that the glitch will trigger, either positive, negative, or either.

glitchCondition

Type: [NationalInstruments.ModularInstruments.NIScopeScopeGlitchTriggerCondition](#)

The condition for the glitch to trigger being greater than or less than.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)

A value indicating whether to apply coupling and filtering options to the trigger signal.

triggerHoldoff

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after receiving the trigger to start acquiring data.

Exceptions

Exception	Condition
ArgumentNullException	ScopeTriggerSource object passed in was null.
ObjectDisposedException	Configure(ScopeTriggerSource , Double, Double, ScopeTriggerPolarity , ScopeGlitchTriggerCondition , ScopeTriggerCoupling , PrecisionTimeSpan , PrecisionTimeSpan) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	<p>The value for glitch width was invalid. - or -</p> <p>The value for glitch polarity was invalid. - or -</p> <p>The value for glitch condition was invalid. - or -</p> <p>The value for coupling was invalid. - or -</p> <p>The value for holdoff was invalid. - or -</p> <p>The value for delay was invalid. - or -</p> <p>The underlying NI-SCOPE driver returned an error.</p>

    triggerCoupling As ScopeTriggerCoupling,
    triggerHoldoff As PrecisionTimeSpan,
    triggerDelay As PrecisionTimeSpan
)

```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
The trigger source.

level

Type: [SystemDouble](#)
A value indicating the voltage level at which the glitch will trigger.

glitchWidth

Type: [SystemDouble](#)
A value indicating the width at which the glitch will trigger.

triggerPolarity

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerPolarity](#)
The polarity that the glitch will trigger, either positive, negative, or either.

glitchCondition

Type: [NationalInstruments.ModularInstruments.NIScopeScopeGlitchTriggerCondition](#)
The condition for the glitch to trigger being greater than or less than.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)

A value indicating whether to apply coupling and filtering options to the trigger signal.

triggerHoldoff

Type: [NationalInstruments.PrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

ScopeGlitchTriggerCondition Enumeration

Specifies the polarity of the glitch that triggers the oscilloscope.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeGlitchTriggerCondition
```

```
Public Enumeration ScopeGlitchTriggerCondition
```

Members

Member name	Value	Description
LessThan	1	Glitch will trigger when it is less than the set width
GreaterThan	2	Glitch will trigger when it is greater than the set width.

Remarks

The end-user specifies the width and condition for the glitch, [GlitchWidthGlitchCondition](#)

ScopeInputClockSource Class

Represents the source terminal for [ReferenceClockSource](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeInputClockSource

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public sealed class ScopeInputClockSource
```

```
Public NotInheritable Class ScopeInputClockSource
```

The ScopeInputClockSource type exposes the following members.

Properties

	Name	Description
	Aux0ClkIn	Gets the source terminal for AUX I/O connector 0 Clk In.
	ClockIn	Gets the source terminal for CLK IN.
	External	Gets the source terminal for External.
	NoSource	Gets the source terminal for no source.
	Pfi0	Gets the source terminal for PFI 0.

 S	Pfi1	Gets the source terminal for PFI 1.
 S	Pfi2	Gets the source terminal for PFI 2.
 S	PxiClock	Gets the source terminal for PXI CLK.
 S	RtsiClock	Gets the source terminal for RTSI Clock.

[Top](#)

Methods

	Name	Description
 S	Equals(Object)	Determines whether the current instance of <code>ScopeInputClockSource</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 S	Equals(ScopeInputClockSource)	Determines whether the current instance of <code>ScopeInputClockSource</code> and the specified <code>ScopeInputClockSource</code> object are equal.
 S	FromString	Creates a <code>ScopeInputClockSource</code> object from the specified <code>String</code> .
 S	GetHashCode	Gets the hash code for the current instance of <code>ScopeInputClockSource</code> . (Overrides ObjectGetHashCode .)
 S	GetType	Gets the <code>Type</code> of the current instance. (Inherited from Object .)
 S	ToString	Converts the current instance of <code>ScopeInputClockSource</code> to <code>String</code> . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
 S	Equality	Checks whether two <code>ScopeInputClockSource</code> object instances are equal.
 S	(String to ScopeInputClockSource)	Converts a specified <code>String</code> to an equivalent <code>ScopeInputClockSource</code> object.
 S	(ScopeInputClockSource to String)	Converts a <code>ScopeInputClockSource</code> object to an equivalent <code>String</code> .

	Inequality	Checks whether two ScopeInputClockSource object instances are not equal.
---	----------------------------	--

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeInputClockSource Properties

The [ScopeInputClockSource](#) type exposes the following members.

Properties

	Name	Description
	Aux0ClkIn	Gets the source terminal for AUX I/O connector 0 Clk In.
	ClockIn	Gets the source terminal for CLK IN.
	External	Gets the source terminal for External.
	NoSource	Gets the source terminal for no source.
	Pfi0	Gets the source terminal for PFI 0.
	Pfi1	Gets the source terminal for PFI 1.
	Pfi2	Gets the source terminal for PFI 2.

 PxiClock	Gets the source terminal for PXI CLK.
 RtSiClock	Gets the source terminal for RTSI Clock.

ScopeInputClockSourceAux0ClkIn Property

Gets the source terminal for AUX I/O connector 0 Clk In.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeInputClockSource Aux0ClkIn { get; }
```

```
Public Shared ReadOnly Property Aux0ClkIn As ScopeInputClockSource
    Get
```

Property Value

Type: [ScopeInputClockSource](#)

A [ScopeInputClockSource](#) representing the [String](#) "VAL_AUX_0_CLK_IN".

See Also

Reference

ScopeInputClockSourceClockIn Property

Gets the source terminal for CLK IN.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeInputClockSource ClockIn { get; }
```

```
Public Shared ReadOnly Property ClockIn As ScopeInputClockSource
    Get
```

Property Value

Type: [ScopeInputClockSource](#)

A [ScopeInputClockSource](#) representing the [String](#) "VAL_CLK_IN".

ScopeInputClockSourceExternal Property

Gets the source terminal for External.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeInputClockSource External { get; }
```

```
Public Shared ReadOnly Property External As ScopeInputClockSource  
    Get
```

Property Value

Type: [ScopeInputClockSource](#)

A [ScopeInputClockSource](#) representing the [String](#) "VAL_EXTERNAL".

See Also

ScopeInputClockSourceNoSource Property

Gets the source terminal for no source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeInputClockSource NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As ScopeInputClockSource  
    Get
```

Property Value

Type: [ScopeInputClockSource](#)

A [ScopeInputClockSource](#) representing the [String](#) "VAL_NO_SOURCE".

ScopeInputClockSourcePfi0 Property

Gets the source terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeInputClockSource Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeInputClockSource  
    Get
```

Property Value

Type: [ScopeInputClockSource](#)

A [ScopeInputClockSource](#) representing the [String](#) "VAL_PFI_0".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeInputClockSource Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeInputClockSource  
    Get
```

Property Value

Type: [ScopeInputClockSource](#)

A [ScopeInputClockSource](#) representing the [String](#) "VAL_PFI_1".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeInputClockSource Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeInputClockSource  
    Get
```

Property Value

Type: [ScopeInputClockSource](#)

A [ScopeInputClockSource](#) representing the [String](#) "VAL_PFI_2".

ScopeInputClockSource Methods

The [ScopeInputClockSource](#) type exposes the following members.

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeInputClockSource and the specified object are equal. (Overrides Object.Equals(Object) .)

 Equals(ScopelInputClockSource)	Determines whether the current instance of ScopelInputClockSource and the specified ScopelInputClockSource object are equal.
 FromString	Creates a ScopelInputClockSource object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopelInputClockSource . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopelInputClockSource to String . (Overrides ObjectToString .)

[Top](#)

ScopeInputClockSourceEquals Method (Object)

Determines whether the current instance of [ScopeInputClockSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeInputClockSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

ScopeInputClockSourceFromString Method

Creates a [ScopeInputClockSource](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeInputClockSource FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeInputClockSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeInputClockSource](#) object returned represents.

Return Value

Type: [ScopeInputClockSource](#)

Returns an object of type [ScopeInputClockSource](#) representing the specified source [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeInputClockSource](#).

ScopeInputClockSource Operators and Type Conversions

The [ScopeInputClockSource](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeInputClockSource object instances are equal.
	(String to ScopeInputClockSource)	Converts a specified String to an equivalent ScopeInputClockSource object.
	(ScopeInputClockSource to String)	Converts a ScopeInputClockSource object to an equivalent String .
	Inequality	Checks whether two ScopeInputClockSource object instances are not equal.

ScopeInputClockSourceEquality Operator

Checks whether two [ScopeInputClockSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeInputClockSource source1,
    ScopeInputClockSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeInputClockSource,
    source2 As ScopeInputClockSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeInputClockSource](#)
Specifies the first [ScopeInputClockSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeInputClockSource](#)
Specifies the second [ScopeInputClockSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeInputClockSourceEquality Operator

Checks whether two [ScopeInputClockSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeInputClockSource source1,
    ScopeInputClockSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeInputClockSource,
    source2 As ScopeInputClockSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeInputClockSource](#)
Specifies the first [ScopeInputClockSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeInputClockSource](#)
Specifies the second [ScopeInputClockSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeInputClockSource Conversion (String to ScopeInputClockSource)

Converts a specified [String](#) to an equivalent [ScopeInputClockSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeInputClockSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeInputClockSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeInputClockSource](#) object.

Return Value

Type: [ScopeInputClockSource](#)

Returns the [ScopeInputClockSource](#) object representing the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeInputClockSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeInputClockSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeInputClockSource](#) object.

Return Value

Type: [ScopeInputClockSource](#)

Returns the [ScopeInputClockSource](#) object representing the specified [String](#).

ScopeInterchangeCheckWarningEventArgs Class

Provides NI-SCOPE interchange check warning event arguments.

Inheritance Hierarchy

[SystemObject](#)

[SystemEventArgs](#)

NationalInstruments.ModularInstruments.NIScopeScopeInterchangeCheckWarningEventArgs

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeInterchangeCheckWarningEventArgs : EventArgs
```

```
Public NotInheritable Class ScopeInterchangeCheckWarningEventArgs
    Inherits EventArgs
```

The `ScopeInterchangeCheckWarningEventArgs` type exposes the following members.

Properties

	Name	Description
	Text	Gets the interchange check warning message.

[Top](#)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to [NI High Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeInterchangeCheckWarningEventArgs Methods

The [ScopeInterchangeCheckWarningEventArgs](#) type exposes the following members.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeMeasurement Class

Represents the [NIScope](#) sub-objects that contain the properties and methods related to acquisition.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeMeasurement

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeMeasurement : ScopeSubObject,
    IIVI_ScopeMeasurement
```

```
Public NotInheritable Class ScopeMeasurement
    Inherits ScopeSubObject
    Implements IIVI_ScopeMeasurement
```

The ScopeMeasurement type exposes the following members.

Properties

Name	Description
 FetchInterleavedData	Gets or sets a value specifying whether to retrieve one array with alternating values on the NI 5620/5621.
 FetchInterleavedIQData	Specifies whether a fetch call retrieves a single waveform with I and Q interleaved, or two separate waveforms.
 FetchOffset	Specifies the offset, in samples, to start fetching data within each record. The offset is applied relative to FetchRelativeTo . The offset can be positive or negative.
 FetchRelativeTo	Gets or sets the position to start fetching within one record.
 PointsDone	Gets the actual number of samples acquired since the last fetch, relative to the configured value for FetchRelativeTo , including FetchOffset and for the current configured RecordNumberToFetch .
 RecordsDone	Gets the number of records that have been completely acquired.

 RisInAutoSetupAllowed	Specifies whether the digitizer should use RIS sample rates when searching for a frequency in autoseup.
---	---

[Top](#)

Methods

Name	Description
 Abort	Aborts an acquisition and returns the digitizer to the Idle state. Call this method if the digitizer times out waiting for a trigger.
 AutoSetup	Automatically configures the instrument. When this method is called, the digitizer senses the input signal and automatically configures many of the instrument settings. If a signal is detected on a channel, the driver chooses the smallest available vertical range that is larger than the signal range.
 Commit	Commits to hardware all the parameter settings associated with the task.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 Initiate	Initiates a waveform acquisition.
 Status	Gets the status information about the acquisition.
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Acquisition Functions topic in the [NI High Speed Digitizers Help](#) or to the Fetch and Read topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeMeasurementFetchInterleavedData Property

Gets or sets a value specifying whether to retrieve one array with alternating values on the NI 5620/5621.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool FetchInterleavedData { get; set; }
```

```
Public Property FetchInterleavedData As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

, to retrieve one array with alternating values on the NI 5620/5621; otherwise, .

Exceptions

Exception	Condition
ObjectDisposedException	FetchInterleavedData was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

You can use this attribute to retrieve a single array with I and Q interleaved instead of two separate arrays. If set to `true`, the resulting array is twice the size of the actual record length.

ScopeMeasurementFetchInterleavedData Property

Gets or sets a value specifying whether to retrieve one array with alternating values on the NI 5620/5621.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool FetchInterleavedData { get; set; }
```

```
Public Property FetchInterleavedData As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

`true`, to retrieve one array with alternating values on the NI 5620/5621; otherwise, `false`.

Exceptions

Exception	Condition
ObjectDisposedException	FetchInterleavedData was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

You can use this attribute to retrieve a single array with I and Q interleaved instead of two separate arrays. If set to , the resulting array is twice the size of the actual record length.

ScopeMeasurementFetchInterleavedIQData Property

Specifies whether a fetch call retrieves a single waveform with I and Q interleaved, or two separate waveforms.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool FetchInterleavedIQData { get; set; }
```

```
Public Property FetchInterleavedIQData As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

, if the number of elements returned by scalar fetch types (such as 16-bit integer) is twice the requested number of samples, and if during DDC acquisitions in Complex mode, two noninterleaved arrays of data are returned per channel, per record. The default value is .

Remarks

This attribute can be used only with high-speed digitizers that support onboard signal processing (OSP). NI-SCOPE throws an exception if you use this attribute with an instrument that does not support OSP.

Note

If this is set to , then the following methods, as well as their overloads and async versions, will return waveforms with twice the number of samples specified: [Read\(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble\)](#), [FetchByte\(PrecisionTimeSpan, Int64, AnalogWaveformCollectionByte\)](#), [FetchInt16\(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt16\)](#), [FetchInt32\(PrecisionTimeSpan, Int64, AnalogWaveformCollectionInt32\)](#), and [FetchDouble\(PrecisionTimeSpan, Int64, AnalogWaveformCollectionDouble\)](#).

ScopeMeasurementAutoSetup Method

Automatically configures the instrument. When this method is called, the digitizer senses the input signal and automatically configures many of the instrument settings. If a signal is detected on a channel, the driver chooses the smallest available vertical range that is larger than the signal range.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void AutoSetup()
```

```
Public Sub AutoSetup
```

Implements

IlviScopeMeasurementAutoSetup

Remarks

If no signal is found on any analog input channel, a warning is returned, and all channels are enabled. A channel is considered to have a signal present if the signal is at least 10% of the smallest vertical range available for that channel.

See Also

Reference

[ScopeMeasurement Class](#)

ScopeMeasurementFirFilterWindow Enumeration

Specifies the FIR window type. The symmetric windows are applied to the FIR filter coefficients to limit passband ripple in FIR filters.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeMeasurementFirFilterWindow
```

```
Public Enumeration ScopeMeasurementFirFilterWindow
```

Members

Member name	Value	Description
None	0	Windowing is not applied to the FIR filter coefficients.
HanningWindow	409	A Hanning window is applied to the FIR filter coefficients.
FlatTopWindow	410	A Flat Top window is applied to the FIR filter coefficients.
HammingWindow	420	A Hamming window is applied to the FIR filter coefficients.
TriangleWindow	423	A Triangle window is applied to the FIR filter coefficients.
BlackmanWindow	424	A Blackman window is applied to the FIR filter coefficients.

ScopeMeasurementPercentageMethod Enumeration

Specifies the method used to map percentage reference units to voltages for the reference.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeMeasurementPercentageMethod
```

```
Public Enumeration ScopeMeasurementPercentageMethod
```

Members

Member name	Value	Description
LowHigh	0	The reference level percentages must be computed using the low/high method.
MinMax	1	The reference level percentages must be computed using the min/max method.
BaseTop	2	The reference level percentages must be computed using the base-to-top method.

ScopeMeasurementReferenceLevelUnits Enumeration

Specifies the units of the waveform measurement reference levels. If you choose Percentage, then the measurement routine uses [PercentageMethod](#) to map the percentage values to voltages. By choosing Voltage, you can set the voltage threshold values directly and avoid extra calculations.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeMeasurementReferenceLevelUnits
```

```
Public Enumeration ScopeMeasurementReferenceLevelUnits
```

Members

Member name	Value	Description
Voltage	0	The reference levels are given in units of volts.
Percentage	1	The reference levels are given as a percentage, where the measurements voltage low and voltage high represent 0% and 100%, respectively.

ScopeOutputClockSource Class

Represents the output terminal for [ReferenceClockOutputTerminal](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeOutputClockSource

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeOutputClockSource
```

```
Public NotInheritable Class ScopeOutputClockSource
```

The ScopeOutputClockSource type exposes the following members.

Properties

	Name	Description
	Aux0ClkOut	Gets the output terminal for AUX I/O connector 0 Clk Out.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.

 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.
 RtsiClock	Gets the output terminal for RTSI Clock.

[Top](#)

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeOutputClockSource and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeOutputClockSource)	Determines whether the current instance of ScopeOutputClockSource and the specified ScopeOutputClockSource object are equal.
	 FromString	Creates a ScopeOutputClockSource object from the specified String .
	GetHashCode	Gets the hash code for the current instance of ScopeOutputClockSource. (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of ScopeOutputClockSource to String . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
 	Equality	Checks whether two ScopeOutputClockSource object instances are equal.
 	(String to ScopeOutputClockSource)	Converts a specified String to an equivalent ScopeOutputClockSource object.
 	(ScopeOutputClockSource to String)	Converts a ScopeOutputClockSource object to an equivalent String .

	Inequality	Checks whether two ScopeOutputClockSource object instances are not equal.
---	----------------------------	---

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeOutputClockSource Properties

The [ScopeOutputClockSource](#) type exposes the following members.

Properties

	Name	Description
	Aux0ClkOut	Gets the output terminal for AUX I/O connector 0 Clk Out.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	Rtsi0	Gets the output terminal for RTSI 0.

 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.
 RtsiClock	Gets the output terminal for RTSI Clock.

ScopeOutputClockSource Properties

The [ScopeOutputClockSource](#) type exposes the following members.

Properties

	Name	Description
	Aux0ClkOut	Gets the output terminal for AUX I/O connector 0 Clk Out.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.
	RtsiClock	Gets the output terminal for RTSI Clock.

ScopeOutputClockSourceRtsi5 Property

Gets the output terminal for RTSI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeOutputClockSource Rtsi5 { get; }
```

```
Public Shared ReadOnly Property Rtsi5 As ScopeOutputClockSource
    Get
```

Property Value

Type: [ScopeOutputClockSource](#)

A [ScopeOutputClockSource](#) representing the [String](#) "VAL_RTSI_5".

See Also

Reference

ScopeOutputClockSourceRtsi6 Property

Gets the output terminal for RTSI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeOutputClockSource Rtsi6 { get; }
```

```
Public Shared ReadOnly Property Rtsi6 As ScopeOutputClockSource  
    Get
```

Property Value

Type: [ScopeOutputClockSource](#)

A [ScopeOutputClockSource](#) representing the [String](#) "VAL_RTSI_6".

ScopeOutputClockSourceRtsi7 Property

Gets the output terminal for RTSI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeOutputClockSource Rtsi7 { get; }
```

```
Public Shared ReadOnly Property Rtsi7 As ScopeOutputClockSource  
    Get
```

Property Value

Type: [ScopeOutputClockSource](#)

A [ScopeOutputClockSource](#) representing the [String](#) "VAL_RTSI_7".

ScopeOutputClockSourceRtsiClock Property

Gets the output terminal for RTSI Clock.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeOutputClockSource RtsiClock { get; }
```

```
Public Shared ReadOnly Property RtsiClock As ScopeOutputClockSource
    Get
```

Property Value

Type: [ScopeOutputClockSource](#)

A [ScopeOutputClockSource](#) representing the [String](#) "VAL_RTSI_CLOCK".

ScopeOutputClockSource Methods

The [ScopeOutputClockSource](#) type exposes the following members.

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeOutputClockSource and the specified object are equal. (Overrides Object.Equals(Object) .)
	Equals(ScopeOutputClockSource)	Determines whether the current instance of ScopeOutputClockSource and the specified ScopeOutputClockSource object are equal.
	FromString	Creates a ScopeOutputClockSource object from the specified String .

 GetHashCode	Gets the hash code for the current instance of ScopeOutputClockSource . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeOutputClockSource to String . (Overrides ObjectToString .)

[Top](#)[See Also](#)[Reference](#)[ScopeOutputClockSource Class](#)[NationalInstruments.ModularInstruments.NIScope Namespace](#)

ScopeOutputClockSourceEquals Method (Object)

Determines whether the current instance of [ScopeOutputClockSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeOutputClockSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

ScopeOutputClockSourceFromString Method

Creates a [ScopeOutputClockSource](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public static ScopeOutputClockSource FromString(
    string source
)
```

```
Public Shared Function FromString (
    source As String
) As ScopeOutputClockSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeOutputClockSource](#) object returned represents.

Return Value

Type: [ScopeOutputClockSource](#)

Returns an object of type [ScopeOutputClockSource](#) representing the specified source [String](#).

ScopeOutputClockSource Operators and Type Conversions

The [ScopeOutputClockSource](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeOutputClockSource object instances are equal.
	(String to ScopeOutputClockSource)	Converts a specified String to an equivalent ScopeOutputClockSource object.
	(ScopeOutputClockSource to String)	Converts a ScopeOutputClockSource object to an equivalent String .
	Inequality	Checks whether two ScopeOutputClockSource object instances are not equal.

ScopeOutputClockSourceEquality Operator

Checks whether two [ScopeOutputClockSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeOutputClockSource source1,
    ScopeOutputClockSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeOutputClockSource,
    source2 As ScopeOutputClockSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeOutputClockSource](#)
Specifies the first [ScopeOutputClockSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeOutputClockSource](#)
Specifies the second [ScopeOutputClockSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeOutputClockSourceEquality Operator

Checks whether two [ScopeOutputClockSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeOutputClockSource source1,
    ScopeOutputClockSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeOutputClockSource,
    source2 As ScopeOutputClockSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeOutputClockSource](#)
Specifies the first [ScopeOutputClockSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeOutputClockSource](#)
Specifies the second [ScopeOutputClockSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeOutputClockSource Conversion (String to ScopeOutputClockSource)

Converts a specified [String](#) to an equivalent [ScopeOutputClockSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeOutputClockSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeOutputClockSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeOutputClockSource](#) object.

Return Value

Type: [ScopeOutputClockSource](#)

Returns the [ScopeOutputClockSource](#) object representing the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeOutputClockSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeOutputClockSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeOutputClockSource](#) object.

Return Value

Type: [ScopeOutputClockSource](#)

Returns the [ScopeOutputClockSource](#) object representing the specified [String](#).

ScopeOutputClockSourceInequality Operator

Checks whether two [ScopeOutputClockSource](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(
    ScopeOutputClockSource source1,
    ScopeOutputClockSource source2
)
```

```
Public Shared Operator <> (
    source1 As ScopeOutputClockSource,
    source2 As ScopeOutputClockSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeOutputClockSource](#)
Specifies the first [ScopeOutputClockSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeOutputClockSource](#)
Specifies the second [ScopeOutputClockSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeOverflowErrorReportingMode Enumeration

Controls the overflow error reporting behavior of the digital downconverter (DDC) block of the onboard signal processing (OSP) device.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeOverflowErrorReportingMode
```

```
Public Enumeration ScopeOverflowErrorReportingMode
```

Members

Member name	Value	Description
Error	0	A ModularInstrumentsException is thrown when an overflow occurs in the onboard signal processing (OSP) block.
Warning	1	No exceptions are thrown when an overflow occurs in the onboard signal processing (OSP) block. A warning occurs. Hook onto Warning of ModularInstrumentsWarning to get the warning message.
Disabled	2	No exceptions are thrown when an overflow occurs in the onboard signal processing (OSP) block.

ScopeReadyForAdvanceEventOutputTerminal Class

Represents the output terminal for [ReadyForAdvanceEventOutputTerminal](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeReadyForAdvanceEventOutputTerminal

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeReadyForAdvanceEventOutputTerminal
```

```
Public NotInheritable Class ScopeReadyForAdvanceEventOutputTerminal
```

The `ScopeReadyForAdvanceEventOutputTerminal` type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.

 Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
 Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
 Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
 Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
 Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
 ClockOut	Gets the output terminal for CLK OUT.
 NoSource	Gets the output terminal for no source.
 Pfi0	Gets the output terminal for PFI 0.
 Pfi1	Gets the output terminal for PFI 1.
 Pfi2	Gets the output terminal for PFI 2.
 PxiStar	Gets the output terminal for PXI STAR.
 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of <code>ScopeReadyForAdvanceEventOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeReadyForAdvanceEventOutputTerminal)	Determines whether the current instance of <code>ScopeReadyForAdvanceEventOutputTerminal</code> and the specified <code>ScopeReadyForAdvanceEventOutputTerminal</code> object are equal.

 FromString 	Creates a <code>ScopeReadyForAdvanceEventOutputTerminal</code> object from the specified String .
 GetHashCode	Gets the hash code for the current instance of <code>ScopeReadyForAdvanceEventOutputTerminal</code> . (Overrides Object.GetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of <code>ScopeReadyForAdvanceEventOutputTerminal</code> to String . (Overrides Object.ToString .)

[Top](#)

Operators

Name	Description
 Equality 	Checks whether two <code>ScopeReadyForAdvanceEventOutputTerminal</code> object instances are equal.
 (String to ScopeReadyForAdvanceEventOutputTerminal) 	Converts a specified String to an equivalent <code>ScopeReadyForAdvanceEventOutputTerminal</code> object.
 (ScopeReadyForAdvanceEventOutputTerminal to String) 	Converts a <code>ScopeReadyForAdvanceEventOutputTerminal</code> object to an equivalent String .
 Inequality 	Checks whether two <code>ScopeReadyForAdvanceEventOutputTerminal</code> object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeReadyForAdvanceEventOutputTerminal Properties

The [ScopeReadyForAdvanceEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.

 Pfi1	Gets the output terminal for PFI 1.
 Pfi2	Gets the output terminal for PFI 2.
 PxiStar	Gets the output terminal for PXI STAR.
 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

ScopeReadyForAdvanceEventOutputTerminalAux0Pfi

Gets the output terminal for AUX I/O connector 0 PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Aux0Pfi1 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi1 As  
ScopeReadyForAdvanceEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_1".

See Also

Reference

ScopeReadyForAdvanceEventOutputTerminalAux0Pfi2

Gets the output terminal for AUX I/O connector 0 PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Aux0Pfi2 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi2 As  
ScopeReadyForAdvanceEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_2".

ScopeReadyForAdvanceEventOutputTerminalAux0Pfi3

Gets the output terminal for AUX I/O connector 0 PFI 3.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Aux0Pfi3 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi3 As  
ScopeReadyForAdvanceEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_3".

ScopeReadyForAdvanceEventOutputTerminalAux0Pfi4

Gets the output terminal for AUX I/O connector 0 PFI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
 Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Aux0Pfi4 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi4 As  
ScopeReadyForAdvanceEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)
 A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_4".

ScopeReadyForAdvanceEventOutputTerminalAux0Pfi4

Gets the output terminal for AUX I/O connector 0 PFI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
 Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Aux0Pfi5 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi5 As
    ScopeReadyForAdvanceEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_5".

ScopeReadyForAdvanceEventOutputTerminalAux0Pfi6

Gets the output terminal for AUX I/O connector 0 PFI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Aux0Pfi6 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi6 As
    ScopeReadyForAdvanceEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_6".

ScopeReadyForAdvanceEventOutputTerminalAux0Pfi7

Gets the output terminal for AUX I/O connector 0 PFI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Aux0Pfi7 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi7 As  
ScopeReadyForAdvanceEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_7".

ScopeReadyForAdvanceEventOutputTerminalClockOut

Gets the output terminal for CLK OUT.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal ClockOut { get; }
```

```
Public Shared ReadOnly Property ClockOut As  
ScopeReadyForAdvanceEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_CLK_OUT".

ScopeReadyForAdvanceEventOutputTerminalNoSource

Gets the output terminal for no source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As  
ScopeReadyForAdvanceEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

ScopeReadyForAdvanceEventOutputTerminalPfi0 Pr

Gets the output terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeReadyForAdvanceEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)
A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_PFI_0".

ScopeReadyForAdvanceEventOutputTerminalPfi1 Pr

Gets the output terminal for PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeReadyForAdvanceEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_PFI_1".

ScopeReadyForAdvanceEventOutputTerminalPfi2 Pr

Gets the output terminal for PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeReadyForAdvanceEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_PFI_2".

ScopeReadyForAdvanceEventOutputTerminalPxiStar

Gets the output terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As  
ScopeReadyForAdvanceEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_PXI_STAR".

ScopeReadyForAdvanceEventOutputTerminal Properties

The [ScopeReadyForAdvanceEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As  
    ScopeReadyForAdvanceEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

ScopeReadyForAdvanceEventOutputTerminalPfi0 Property

Gets the output terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeReadyForAdvanceEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_PFI_0".

ScopeReadyForAdvanceEventOutputTerminalPfi1 Property

Gets the output terminal for PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeReadyForAdvanceEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_PFI_1".

ScopeReadyForAdvanceEventOutputTerminalPxiStar Property

Gets the output terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As
ScopeReadyForAdvanceEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)
 A [ScopeReadyForAdvanceEventOutputTerminal](#) representing the [String](#) "VAL_PXI_STAR".

ScopeReadyForAdvanceEventOutputTerminal Methods

The [ScopeReadyForAdvanceEventOutputTerminal](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeReadyForAdvanceEventOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeReadyForAdvanceEventOutputTerminal)	Determines whether the current instance of ScopeReadyForAdvanceEventOutputTerminal and the specified ScopeReadyForAdvanceEventOutputTerminal object are equal.
 FromString 	Creates a ScopeReadyForAdvanceEventOutputTerminal object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeReadyForAdvanceEventOutputTerminal . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeReadyForAdvanceEventOutputTerminal to String . (Overrides ObjectToString .)

ScopeReadyForAdvanceEventOutputTerminalEquals

Determines whether the current instance of [ScopeReadyForAdvanceEventOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeReadyForAdvanceEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Creates a [ScopeReadyForAdvanceEventOutputTerminal](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForAdvanceEventOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeReadyForAdvanceEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeReadyForAdvanceEventOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

Returns an object of type [ScopeReadyForAdvanceEventOutputTerminal](#) representing the specified source [String](#).

ScopeReadyForAdvanceEventOutputTerminal Operators and Type Conversions

The [ScopeReadyForAdvanceEventOutputTerminal](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeReadyForAdvanceEventOutputTerminal object instances are equal.
	(String to ScopeReadyForAdvanceEventOutputTerminal)	Converts a specified String to an equivalent ScopeReadyForAdvanceEventOutputTerminal object.

 	(ScopeReadyForAdvanceEventOutputTerminal to String)	Converts a ScopeReadyForAdvanceEventOutputTerminal object to an equivalent String .
 	Inequality	Checks whether two ScopeReadyForAdvanceEventOutputTerminal object instances are not equal.

ScopeReadyForAdvanceEventOutputTerminalEquality

Checks whether two [ScopeReadyForAdvanceEventOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeReadyForAdvanceEventOutputTerminal source1,
    ScopeReadyForAdvanceEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeReadyForAdvanceEventOutputTerminal,
    source2 As ScopeReadyForAdvanceEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForAdvanceEventOutputTerminal](#)
Specifies the first [ScopeReadyForAdvanceEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForAdvanceEventOutputTerminal](#)
Specifies the second [ScopeReadyForAdvanceEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReadyForAdvanceEventOutputTerminalEquality Operator

Checks whether two [ScopeReadyForAdvanceEventOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeReadyForAdvanceEventOutputTerminal source1,
```

```
ScopeReadyForAdvanceEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeReadyForAdvanceEventOutputTerminal,
    source2 As ScopeReadyForAdvanceEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForAdvanceEventOutputTerminal](#)
 Specifies the first [ScopeReadyForAdvanceEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForAdvanceEventOutputTerminal](#)
 Specifies the second [ScopeReadyForAdvanceEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReadyForAdvanceEventOutputTerminal Conversion (String to ScopeReadyForAdvanceEventOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeReadyForAdvanceEventOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeReadyForAdvanceEventOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeReadyForAdvanceEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeReadyForAdvanceEventOutputTerminal](#) object.

Return Value

Type: [ScopeReadyForAdvanceEventOutputTerminal](#)

Returns the [ScopeReadyForAdvanceEventOutputTerminal](#) object representing the specified [String](#).

    ScopeReadyForAdvanceEventOutputTerminal source2
)
```

```
Public Shared Operator <> (
    source1 As ScopeReadyForAdvanceEventOutputTerminal,
    source2 As ScopeReadyForAdvanceEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForAdvanceEventOutputTerminal](#)
Specifies the first [ScopeReadyForAdvanceEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForAdvanceEventOutputTerminal](#)
Specifies the second [ScopeReadyForAdvanceEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeReadyForReferenceEventOutputTerminal Class

Represents the output terminal for [ReadyForReferenceEventOutputTerminal](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeReadyForReferenceEventOutputTerminal

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeReadyForReferenceEventOutputTerminal
```

```
Public NotInheritable Class ScopeReadyForReferenceEventOutputTerminal
```

The `ScopeReadyForReferenceEventOutputTerminal` type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.

 Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
 Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
 Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
 Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
 Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
 ClockOut	Gets the output terminal for CLK OUT.
 NoSource	Gets the output terminal for no source.
 Pfi0	Gets the output terminal for PFI 0.
 Pfi1	Gets the output terminal for PFI 1.
 Pfi2	Gets the output terminal for PFI 2.
 PxiStar	Gets the output terminal for PXI STAR.
 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of <code>ScopeReadyForReferenceEventOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeReadyForReferenceEventOutputTerminal)	Determines whether the current instance of <code>ScopeReadyForReferenceEventOutputTerminal</code> and the specified <code>ScopeReadyForReferenceEventOutputTerminal</code> object are equal.

 FromString 	Creates a <code>ScopeReadyForReferenceEventOutputTerminal</code> object from the specified <code>String</code> .
 GetHashCode	Gets the hash code for the current instance of <code>ScopeReadyForReferenceEventOutputTerminal</code> . (Overrides <code>Object.GetHashCode</code> .)
 GetType	Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code> .)
 ToString	Converts the current instance of <code>ScopeReadyForReferenceEventOutputTerminal</code> to <code>String</code> . (Overrides <code>Object.ToString</code> .)

[Top](#)

Operators

Name	Description
 Equality 	Checks whether two <code>ScopeReadyForReferenceEventOutputTerminal</code> object instances are equal.
 (String to ScopeReadyForReferenceEventOutputTerminal) 	Converts a specified <code>String</code> to an equivalent <code>ScopeReadyForReferenceEventOutputTerminal</code> object.
 (ScopeReadyForReferenceEventOutputTerminal to String) 	Converts a <code>ScopeReadyForReferenceEventOutputTerminal</code> object to an equivalent <code>String</code> .
 Inequality 	Checks whether two <code>ScopeReadyForReferenceEventOutputTerminal</code> object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeReadyForReferenceEventOutputTerminal Properties

The [ScopeReadyForReferenceEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.

 Pfi1	Gets the output terminal for PFI 1.
 Pfi2	Gets the output terminal for PFI 2.
 PxiStar	Gets the output terminal for PXI STAR.
 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

ScopeReadyForReferenceEventOutputTerminal Properties

The [ScopeReadyForReferenceEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	<u>Aux0Pfi0</u>	Gets the output terminal for AUX I/O connector 0 PFI 0.
	<u>Aux0Pfi1</u>	Gets the output terminal for AUX I/O connector 0 PFI 1.
	<u>Aux0Pfi2</u>	Gets the output terminal for AUX I/O connector 0 PFI 2.
	<u>Aux0Pfi3</u>	Gets the output terminal for AUX I/O connector 0 PFI 3.
	<u>Aux0Pfi4</u>	Gets the output terminal for AUX I/O connector 0 PFI 4.
	<u>Aux0Pfi5</u>	Gets the output terminal for AUX I/O connector 0 PFI 5.
	<u>Aux0Pfi6</u>	Gets the output terminal for AUX I/O connector 0 PFI 6.
	<u>Aux0Pfi7</u>	Gets the output terminal for AUX I/O connector 0 PFI 7.
	<u>ClockOut</u>	Gets the output terminal for CLK OUT.
	<u>NoSource</u>	Gets the output terminal for no source.
	<u>Pfi0</u>	Gets the output terminal for PFI 0.
	<u>Pfi1</u>	Gets the output terminal for PFI 1.
	<u>Pfi2</u>	Gets the output terminal for PFI 2.
	<u>PxiStar</u>	Gets the output terminal for PXI STAR.
	<u>Rtsi0</u>	Gets the output terminal for RTSI 0.
	<u>Rtsi1</u>	Gets the output terminal for RTSI 1.
	<u>Rtsi2</u>	Gets the output terminal for RTSI 2.
	<u>Rtsi3</u>	Gets the output terminal for RTSI 3.
	<u>Rtsi4</u>	Gets the output terminal for RTSI 4.
	<u>Rtsi5</u>	Gets the output terminal for RTSI 5.
	<u>Rtsi6</u>	Gets the output terminal for RTSI 6.
	<u>Rtsi7</u>	Gets the output terminal for RTSI 7.

ScopeReadyForReferenceEventOutputTerminalAux0Pfi0 Property

Gets the output terminal for AUX I/O connector 0 PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForReferenceEventOutputTerminal Aux0Pfi0 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi0 As  
ScopeReadyForReferenceEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForReferenceEventOutputTerminal](#)

A [ScopeReadyForReferenceEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_0".

ScopeReadyForReferenceEventOutputTerminalAux0Pfi1 Property

Gets the output terminal for AUX I/O connector 0 PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForReferenceEventOutputTerminal Aux0Pfi1 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi1 As
ScopeReadyForReferenceEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForReferenceEventOutputTerminal](#)

A [ScopeReadyForReferenceEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_1".

ScopeReadyForReferenceEventOutputTerminal Methods

The [ScopeReadyForReferenceEventOutputTerminal](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeReadyForReferenceEventOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeReadyForReferenceEventOutputTerminal)	Determines whether the current instance of ScopeReadyForReferenceEventOutputTerminal and the specified ScopeReadyForReferenceEventOutputTerminal object are equal.
 FromString 	Creates a ScopeReadyForReferenceEventOutputTerminal object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeReadyForReferenceEventOutputTerminal . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeReadyForReferenceEventOutputTerminal to String . (Overrides ObjectToString .)

[Top](#)[See Also](#)[Reference](#)[ScopeReadyForReferenceEventOutputTerminal Class](#)[NationalInstruments.ModularInstruments.NIScope Namespace](#)

ScopeReadyForReferenceEventOutputTerminalEqual

Overload List

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeReadyForReferenceEventOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeReadyForReferenceEventOutputTerminal)	Determines whether the current instance of ScopeReadyForReferenceEventOutputTerminal and the specified ScopeReadyForReferenceEventOutputTerminal object are equal.

[Top](#)[See Also](#)[Reference](#)[ScopeReadyForReferenceEventOutputTerminal Class](#)[NationalInstruments.ModularInstruments.NIScope Namespace](#)

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeReadyForReferenceEventOutputTerminalEqual

Determines whether the current instance of [ScopeReadyForReferenceEventOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeReadyForReferenceEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeReadyForReferenceEventOutputTerminalEquals

Determines whether the current instance of [ScopeReadyForReferenceEventOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeReadyForReferenceEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeReadyForReferenceEventOutputTerminal source  
)
```

```
Public Function Equals (  
    source As ScopeReadyForReferenceEventOutputTerminal  
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForReferenceEventOutputTerminal](#)
Specifies the [ScopeReadyForReferenceEventOutputTerminal](#) object to compare to the current instance of [ScopeReadyForReferenceEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReadyForReferenceEventOutputTerminalFromString Method

Creates a [ScopeReadyForReferenceEventOutputTerminal](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForReferenceEventOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeReadyForReferenceEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeReadyForReferenceEventOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeReadyForReferenceEventOutputTerminal](#)

Returns an object of type [ScopeReadyForReferenceEventOutputTerminal](#) representing the specified source [String](#).

ScopeReadyForReferenceEventOutputTerminal.GetHashCode Method

Gets the hash code for the current instance of [ScopeReadyForReferenceEventOutputTerminal](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeReadyForReferenceEventOutputTerminal](#).

ScopeReadyForReferenceEventOutputTerminalToString Method

Converts the current instance of [ScopeReadyForReferenceEventOutputTerminal](#) to [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override string ToString()
```

```
Public Overrides Function ToString As String
```

Return Value

Type: [String](#)

Returns a [String](#) representing the current instance of [ScopeReadyForReferenceEventOutputTerminal](#).

See Also

Reference

[ScopeReadyForReferenceEventOutputTerminal Class](#)

ScopeReadyForReferenceEventOutputTerminal Operators and Type Conversions

The [ScopeReadyForReferenceEventOutputTerminal](#) type exposes the following members.

Operators

Name	Description
 Equality	Checks whether two ScopeReadyForReferenceEventOutputTerminal object instances are equal.
 (String to ScopeReadyForReferenceEventOutputTerminal)	Converts a specified String to an equivalent ScopeReadyForReferenceEventOutputTerminal object.
 (ScopeReadyForReferenceEventOutputTerminal to String)	Converts a ScopeReadyForReferenceEventOutputTerminal object to an equivalent String .
 Inequality	Checks whether two ScopeReadyForReferenceEventOutputTerminal object instances are not equal.

ScopeReadyForReferenceEventOutputTerminalEqual

Checks whether two [ScopeReadyForReferenceEventOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeReadyForReferenceEventOutputTerminal source1,
    ScopeReadyForReferenceEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeReadyForReferenceEventOutputTerminal,
    source2 As ScopeReadyForReferenceEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForReferenceEventOutputTerminal](#)
Specifies the first [ScopeReadyForReferenceEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForReferenceEventOutputTerminal](#)
Specifies the second [ScopeReadyForReferenceEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReadyForReferenceEventOutputTerminalEquality Operator

Checks whether two [ScopeReadyForReferenceEventOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeReadyForReferenceEventOutputTerminal source1,
    ScopeReadyForReferenceEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeReadyForReferenceEventOutputTerminal,
    source2 As ScopeReadyForReferenceEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForReferenceEventOutputTerminal](#)
Specifies the first [ScopeReadyForReferenceEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForReferenceEventOutputTerminal](#)
Specifies the second [ScopeReadyForReferenceEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReadyForReferenceEventOutputTerminal Conversion (String to ScopeReadyForReferenceEventOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeReadyForReferenceEventOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeReadyForReferenceEventOutputTerminal (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeReadyForReferenceEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeReadyForReferenceEventOutputTerminal](#) object.

Return Value

Type: [ScopeReadyForReferenceEventOutputTerminal](#)

Returns the [ScopeReadyForReferenceEventOutputTerminal](#) object representing the specified [String](#).

ScopeReadyForReferenceEventOutputTerminal Conversion (String to ScopeReadyForReferenceEventOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeReadyForReferenceEventOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeReadyForReferenceEventOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (
    source As String
) As ScopeReadyForReferenceEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeReadyForReferenceEventOutputTerminal](#) object.

Return Value

Type: [ScopeReadyForReferenceEventOutputTerminal](#)

Returns the [ScopeReadyForReferenceEventOutputTerminal](#) object representing the specified [String](#).

(ScopeReadyForReferenceEventOutputTerminal to String)

Converts a [ScopeReadyForReferenceEventOutputTerminal](#) object to an equivalent [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#/VB

```
public static implicit operator string (  
    ScopeReadyForReferenceEventOutputTerminal source  
)
```

```
Public Shared Widening Operator CType (  
    source As ScopeReadyForReferenceEventOutputTerminal  
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForReferenceEventOutputTerminal](#)
Specifies the [ScopeReadyForReferenceEventOutputTerminal](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeReadyForReferenceEventOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public static bool operator !=(  
    ScopeReadyForReferenceEventOutputTerminal source1,  
    ScopeReadyForReferenceEventOutputTerminal source2  
)
```

```
Public Shared Operator <> (
    source1 As ScopeReadyForReferenceEventOutputTerminal,
    source2 As ScopeReadyForReferenceEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForReferenceEventOutputTerminal](#)
 Specifies the first [ScopeReadyForReferenceEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForReferenceEventOutputTerminal](#)
 Specifies the second [ScopeReadyForReferenceEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeReadyForStartEventOutputTerminal Class

Represents the output terminal for [ReadyForStartEventOutputTerminal](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeReadyForStartEventOutputTerminal

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeReadyForStartEventOutputTerminal
```

```
Public NotInheritable Class ScopeReadyForStartEventOutputTerminal
```

The `ScopeReadyForStartEventOutputTerminal` type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.

 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of <code>ScopeReadyForStartEventOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeReadyForStartEventOutputTerminal)	Determines whether the current instance of <code>ScopeReadyForStartEventOutputTerminal</code> and the specified <code>ScopeReadyForStartEventOutputTerminal</code> object are equal.
 FromString 	Creates a <code>ScopeReadyForStartEventOutputTerminal</code> object from the specified <code>String</code> .
 GetHashCode	Gets the hash code for the current instance of <code>ScopeReadyForStartEventOutputTerminal</code> . (Overrides ObjectGetHashCode .)
 GetType	Gets the <code>Type</code> of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of <code>ScopeReadyForStartEventOutputTerminal</code> to <code>String</code> . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
	Equality	Checks whether two <code>ScopeReadyForStartEventOutputTerminal</code> object instances are equal.
	(String to <code>ScopeReadyForStartEventOutputTerminal</code>)	Converts a specified String to an equivalent <code>ScopeReadyForStartEventOutputTerminal</code> object.
	(<code>ScopeReadyForStartEventOutputTerminal</code> to String)	Converts a <code>ScopeReadyForStartEventOutputTerminal</code> object to an equivalent String .
	Inequality	Checks whether two <code>ScopeReadyForStartEventOutputTerminal</code> object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeReadyForStartEventOutputTerminal Properties

The [ScopeReadyForStartEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Rtsi1 { get; }
```

```
Public Shared ReadOnly Property Rtsi1 As ScopeReadyForStartEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_RTISI_1".

ScopeReadyForStartEventOutputTerminalRtsi2 Prop

Gets the output terminal for RTSI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Rtsi2 { get; }
```

```
Public Shared ReadOnly Property Rtsi2 As ScopeReadyForStartEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_RTISI_2".

ScopeReadyForStartEventOutputTerminalRtsi3 Prop

Gets the output terminal for RTSI 3.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Rtsi3 { get; }
```

```
Public Shared ReadOnly Property Rtsi3 As ScopeReadyForStartEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_RTSI_3".

ScopeReadyForStartEventOutputTerminalRtsi4 Prop

Gets the output terminal for RTSI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Rtsi4 { get; }
```

```
Public Shared ReadOnly Property Rtsi4 As ScopeReadyForStartEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_RTISI_4".

ScopeReadyForStartEventOutputTerminalRtsi5 Prop

Gets the output terminal for RTSI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Rtsi5 { get; }
```

```
Public Shared ReadOnly Property Rtsi5 As ScopeReadyForStartEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_RTSI_5".

ScopeReadyForStartEventOutputTerminalRtsi6 Prop

Gets the output terminal for RTSI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Rtsi6 { get; }
```

```
Public Shared ReadOnly Property Rtsi6 As ScopeReadyForStartEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_RTSI_6".

ScopeReadyForStartEventOutputTerminalRtsi7 Prop

Gets the output terminal for RTSI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Rtsi7 { get; }
```

```
Public Shared ReadOnly Property Rtsi7 As ScopeReadyForStartEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_RTSI_7".

ScopeReadyForStartEventOutputTerminal Properties

The [ScopeReadyForStartEventOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

ScopeReadyForStartEventOutputTerminalAux0Pfi7 Property

Gets the output terminal for AUX I/O connector 0 PFI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Aux0Pfi7 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi7 As  
ScopeReadyForStartEventOutputTerminal  
Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_7".

ScopeReadyForStartEventOutputTerminalClockOut Property

Gets the output terminal for CLK OUT.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal ClockOut { get; }
```

```
Public Shared ReadOnly Property ClockOut As
ScopeReadyForStartEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_CLK_OUT".

ScopeReadyForStartEventOutputTerminalNoSource Property

Gets the output terminal for no source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As
ScopeReadyForStartEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

Gets the output terminal for PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeReadyForStartEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_PFI_1".

ScopeReadyForStartEventOutputTerminalPfi2 Property

Gets the output terminal for PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeReadyForStartEventOutputTerminal  
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_PFI_2".

ScopeReadyForStartEventOutputTerminalPxiStar Property

Gets the output terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As ScopeReadyForStartEventOutputTerminal
    Get
```

Property Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

A [ScopeReadyForStartEventOutputTerminal](#) representing the [String](#) "VAL_PXI_STAR".

ScopeReadyForStartEventOutputTerminal Methods

The [ScopeReadyForStartEventOutputTerminal](#) type exposes the following members.

Methods

Name	Description
------	-------------

 Equals(Object)	Determines whether the current instance of ScopeReadyForStartEventOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeReadyForStartEventOutputTerminal)	Determines whether the current instance of ScopeReadyForStartEventOutputTerminal and the specified ScopeReadyForStartEventOutputTerminal object are equal.
 FromString 	Creates a ScopeReadyForStartEventOutputTerminal object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeReadyForStartEventOutputTerminal . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeReadyForStartEventOutputTerminal to String . (Overrides ObjectToString .)

ScopeReadyForStartEventOutputTerminalEquals Method

Determines whether the current instance of [ScopeReadyForStartEventOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeReadyForStartEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReadyForStartEventOutputTerminalEquals Method

Determines whether the current instance of [ScopeReadyForStartEventOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (
    obj As Object
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeReadyForStartEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReadyForStartEventOutputTerminalEquals Met

Determines whether the current instance of

[ScopeReadyForStartEventOutputTerminal](#) and the specified

[ScopeReadyForStartEventOutputTerminal](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeReadyForStartEventOutputTerminal source  
)
```

```
Public Function Equals (  
    source As ScopeReadyForStartEventOutputTerminal  
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForStartEventOutputTerminal](#)
Specifies the [ScopeReadyForStartEventOutputTerminal](#) object to compare to the current instance of [ScopeReadyForStartEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReadyForStartEventOutputTerminalEquals Method
(ScopeReadyForStartEventOutputTerminal)

Determines whether the current instance of [ScopeReadyForStartEventOutputTerminal](#) and the specified [ScopeReadyForStartEventOutputTerminal](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(
    ScopeReadyForStartEventOutputTerminal source
)
```

```
Public Function Equals (
    source As ScopeReadyForStartEventOutputTerminal
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForStartEventOutputTerminal](#)

Specifies the [ScopeReadyForStartEventOutputTerminal](#) object to compare to the current instance of [ScopeReadyForStartEventOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReadyForStartEventOutputTerminalFromString Method

Creates a [ScopeReadyForStartEventOutputTerminal](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReadyForStartEventOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeReadyForStartEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeReadyForStartEventOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

Returns an object of type [ScopeReadyForStartEventOutputTerminal](#) representing the specified source [String](#).

ScopeReadyForStartEventOutputTerminalGetHashCode Method

Gets the hash code for the current instance of ScopeReadyForStartEventOutputTerminal.

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: Int32

Returns an Int32 representing the hash code for the current instance of ScopeReadyForStartEventOutputTerminal.

ScopeReadyForStartEventOutputTerminal Operators and Type Conversions

The [ScopeReadyForStartEventOutputTerminal](#) type exposes the following members.

Operators

	Name	Description
  	Equality	Checks whether two ScopeReadyForStartEventOutputTerminal object instances are equal.

	(String to ScopeReadyForStartEventOutputTerminal)	Converts a specified String to an equivalent ScopeReadyForStartEventOutputTerminal object.
	(ScopeReadyForStartEventOutputTerminal to String)	Converts a ScopeReadyForStartEventOutputTerminal object to an equivalent String .
	Inequality	Checks whether two ScopeReadyForStartEventOutputTerminal object instances are not equal.

ScopeReadyForStartEventOutputTerminalEquality Op

Checks whether two [ScopeReadyForStartEventOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public static bool operator ==(
    ScopeReadyForStartEventOutputTerminal source1,
    ScopeReadyForStartEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeReadyForStartEventOutputTerminal,
    source2 As ScopeReadyForStartEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForStartEventOutputTerminal](#)
 Specifies the first [ScopeReadyForStartEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForStartEventOutputTerminal](#)
 Specifies the second [ScopeReadyForStartEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeReadyForStartEventOutputTerminal source1,
    ScopeReadyForStartEventOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeReadyForStartEventOutputTerminal,
    source2 As ScopeReadyForStartEventOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForStartEventOutputTerminal](#)
Specifies the first [ScopeReadyForStartEventOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReadyForStartEventOutputTerminal](#)
Specifies the second [ScopeReadyForStartEventOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public static implicit operator ScopeReadyForStartEventOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (
    source As String
) As ScopeReadyForStartEventOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeReadyForStartEventOutputTerminal](#) object.

Return Value

Type: [ScopeReadyForStartEventOutputTerminal](#)

Returns the [ScopeReadyForStartEventOutputTerminal](#) object representing the specified [String](#).

ScopeReadyForStartEventOutputTerminalInequality Operator

Checks whether two ScopeReadyForStartEventOutputTerminal object instances are not equal.

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(  
    ScopeReadyForStartEventOutputTerminal source1,  
    ScopeReadyForStartEventOutputTerminal source2  
)
```

```
Public Shared Operator <> (  
    source1 As ScopeReadyForStartEventOutputTerminal,  
    source2 As ScopeReadyForStartEventOutputTerminal  
) As Boolean
```

Parameters

source1

Type: NationalInstruments.ModularInstruments.NIScopeScopeReadyForStartEventOutputTerminal
Specifies the first ScopeReadyForStartEventOutputTerminal object to compare.

source2

Type: NationalInstruments.ModularInstruments.NIScopeScopeReadyForStartEventOutputTerminal
Specifies the second ScopeReadyForStartEventOutputTerminal object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeReferenceLevel Class

Provides properties and methods for configuring reference levels used in scalar measurements.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeReferenceLevel](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeReferenceLevel : ScopeSubObject,
    IIVI_ScopeReferenceLevel
```

```
Public NotInheritable Class ScopeReferenceLevel
    Inherits ScopeSubObject
    Implements IIVI_ScopeReferenceLevel
```

The `ScopeReferenceLevel` type exposes the following members.

Properties

	Name	Description
	High	Gets or sets the high reference level used in scalar measurements.
	Low	Gets or sets the low reference level used in scalar measurements.
	Mid	Gets or sets the mid reference level used in scalar measurements.

[Top](#)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Reference Levels topic in the [NI High-Speed Digitizers Help](#) or the Attributes section in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeReferenceLevelHigh Property

Gets or sets the high reference level used in scalar measurements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double High { get; set; }
```

```
Public Property High As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The high reference level used in scalar measurements.

Implements

[IviScopeReferenceLevelHigh](#)

Exceptions

Exception	Condition
ObjectDisposedException	High was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The underlying NI-SCOPE driver returned error.

ScopeReferenceTrigger Class

Represents the [ScopeMeasurement](#) sub-object that contains properties and methods that are related to reference triggers.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeReferenceTrigger](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public sealed class ScopeReferenceTrigger : ScopeSubObject
```

```
Public NotInheritable Class ScopeReferenceTrigger
    Inherits ScopeSubObject
```

The `ScopeReferenceTrigger` type exposes the following members.

Properties

Name	Description
 Delay	Gets or sets the trigger delay time, in seconds. The trigger delay time is the length of time the digitizer waits after receiving the trigger. The event that occurs when the trigger delay elapses is the Reference Event.
 DetectorLocation	Gets or sets which reference trigger detection circuitry to use on the instrument.
 Hysteresis	Specifies the size of the hysteresis window on either side of the trigger level.
 QuietTimeMin	Gets or sets the amount of time the trigger circuit must not detect a signal above the trigger level, or below the trigger level if the trigger slope is negative, before the trigger is armed.
 ReferencePosition	Gets or sets the position of the Reference Event in the waveform record. When the digitizer detects a trigger, it waits the length of time specified by Delay . The event that occurs when the delay time elapses is the Reference Event. The Reference Event is relative to the start of the record and is a percentage of the record length. For example, the value 50.0 corresponds to the center of the waveform record and 0.0 corresponds to the first element in the waveform record.
 Window	Gets the ScopeWindowReferenceTrigger sub-object.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)

 SendSoftwareEdgeTrigger	Sends the Reference Trigger to the digitizer. Call this method if Source has been configured to SoftwareTriggerFunction.
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Configure Trigger topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeReferenceTrigger Properties

The [ScopeReferenceTrigger](#) type exposes the following members.

Properties

Name	Description
 Delay	Gets or sets the trigger delay time, in seconds. The trigger delay time is the length of time the digitizer waits after receiving the trigger. The event that occurs when the trigger delay elapses is the Reference Event.

 DetectorLocation	Gets or sets which reference trigger detection circuitry to use on the instrument.
 Hysteresis	Specifies the size of the hysteresis window on either side of the trigger level.
 QuietTimeMin	Gets or sets the amount of time the trigger circuit must not detect a signal above the trigger level, or below the trigger level if the trigger slope is negative, before the trigger is armed.
 ReferencePosition	Gets or sets the position of the Reference Event in the waveform record. When the digitizer detects a trigger, it waits the length of time specified by Delay . The event that occurs when the delay time elapses is the Reference Event. The Reference Event is relative to the start of the record and is a percentage of the record length. For example, the value 50.0 corresponds to the center of the waveform record and 0.0 corresponds to the first element in the waveform record.
 Window	Gets the ScopeWindowReferenceTrigger sub-object.

ScopeReferenceTriggerDelay Property

Gets or sets the trigger delay time, in seconds. The trigger delay time is the length of time the digitizer waits after receiving the trigger. The event that occurs when the trigger delay elapses is the Reference Event.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public PrecisionTimeSpan Delay { get; set; }
```

```
Public Property Delay As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

Valid values for this property are instrument-dependent, and range from 0.0 seconds to 171.8 seconds.

ScopeReferenceTriggerDetectorLocation Property

Gets or sets which reference trigger detection circuitry to use on the instrument.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeReferenceTriggerDetectorLocation DetectorLocation { get; set; }
```

```
Public Property DetectorLocation As ScopeReferenceTriggerDetectorLocation
    Get
    Set
```

Property Value

Type: [ScopeReferenceTriggerDetectorLocation](#)

Specifies the [ScopeReferenceTriggerDetectorLocation](#). The default value is [AnalogDetectionCircuit](#).

Remarks

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI 5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

ScopeReferenceTriggerHysteresis Property

Specifies the size of the hysteresis window on either side of the trigger level.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax

[C#VB](#)

```
public double Hysteresis { get; set; }
```

```
Public Property Hysteresis As Double
    Get
    Set
```

Property Value

Type: [Double](#)

Units: Volts

Min Value: 0

Max Value for positive trigger slope: $\text{Hysteresis} - \text{trigger level} \geq -(\text{vertical range}/2) + \text{vertical offset}$

Max Value for negative trigger slope: $\text{Hysteresis} + \text{trigger level} \leq -(\text{vertical range}/2) + \text{vertical offset}$

ScopeReferenceTriggerQuietTimeMin Property

Gets or sets the amount of time the trigger circuit must not detect a signal above the trigger level, or below the trigger level if the trigger slope is negative, before the trigger is armed.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan QuietTimeMin { get; set; }
```

```
Public Property QuietTimeMin As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

Any value greater than equal to 0.

Remarks

Before setting this property to any positive value, complete the following steps:

1. Set the trigger [Type](#) to [Edge](#) trigger type.
2. Set the DDC [Enabled](#) to true on channel 0.
3. Set the [DdcDataProcessingMode](#) to [Complex](#)
4. Set the reference trigger [DetectorLocation](#) to [DdcOutput](#).
5. Set the reference trigger [Source](#) to channel "0."

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI 5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

ScopeReferenceTriggerReferencePosition Property

Gets or sets the position of the Reference Event in the waveform record. When the digitizer detects a trigger, it waits the length of time specified by [Delay](#). The event that occurs when the delay time elapses is the Reference Event. The Reference Event is relative to the start of the record and is a percentage of the record length. For example, the value 50.0 corresponds to the center of the waveform record and 0.0 corresponds to the first element in the waveform record.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ReferencePosition { get; set; }
```

```
Public Property ReferencePosition As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

The valid values for this property range from 0.0 to 100.0.

ScopeReferenceTriggerQuietTimeMin Property

Gets or sets the amount of time the trigger circuit must not detect a signal above the trigger level, or below the trigger level if the trigger slope is negative, before the trigger is armed.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan QuietTimeMin { get; set; }
```

```
Public Property QuietTimeMin As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

Any value greater than equal to 0.

Remarks

Before setting this property to any positive value, complete the following steps:

1. Set the trigger [Type](#) to [Edge](#) trigger type.
2. Set the DDC [Enabled](#) to true on channel 0.
3. Set the [DdcDataProcessingMode](#) to [Complex](#)
4. Set the reference trigger [DetectorLocation](#) to [DdcOutput](#).
5. Set the reference trigger [Source](#) to channel "0."

You can access this property only with high-speed digitizers that support onboard signal processing (OSP), such as the NI 5142. If you open a session with an instrument that does not support OSP and you attempt to access this property, a `ModularInstrumentsException` is thrown.

ScopeReferenceTriggerDetectorLocation Enumeration

Specifies which reference trigger detection circuitry to use on a device that has an onboard signal processing (OSP) block.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeReferenceTriggerDetectorLocation
```

```
Public Enumeration ScopeReferenceTriggerDetectorLocation
```

Members

Member name	Value	Description
AnalogDetectionCircuit	0	The hardware analog circuitry is used to implement the reference trigger. This option detects trigger conditions by analyzing the unprocessed analog signal.
DdcOutput	1	The onboard signal processing logic is used to implement the reference trigger. This option detects trigger conditions by analyzing the processed digital signal.

ScopeReferenceTriggerExportedOutputTerminal Class

Represents the reference trigger output terminal for [ReferenceTriggerOutputTerminal](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeReferenceTriggerExportedOutputTerminal

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeReferenceTriggerExportedOutputTerminal
```

```
Public NotInheritable Class ScopeReferenceTriggerExportedOutputTerminal
```

The `ScopeReferenceTriggerExportedOutputTerminal` type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.

 Pfi1	Gets the output terminal for PFI 1.
 Pfi2	Gets the output terminal for PFI 2.
 PxiStar	Gets the output terminal for PXI STAR.
 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of <code>ScopeReferenceTriggerExportedOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeReferenceTriggerExportedOutputTerminal)	Determines whether the current instance of <code>ScopeReferenceTriggerExportedOutputTerminal</code> and the specified <code>ScopeReferenceTriggerExportedOutputTerminal</code> object are equal.
 FromString 	Creates a <code>ScopeReferenceTriggerExportedOutputTerminal</code> object from the specified <code>String</code> .
 GetHashCode	Gets the hash code for the current instance of <code>ScopeReferenceTriggerExportedOutputTerminal</code> . (Overrides ObjectGetHashCode .)
 GetType	Gets the <code>Type</code> of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of <code>ScopeReferenceTriggerExportedOutputTerminal</code> to <code>String</code> . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
 	Equality	Checks whether two <code>ScopeReferenceTriggerExportedOutputTerminal</code> object instances are equal.
 	(String to ScopeReferenceTriggerExportedOutputTerminal)	Converts a specified <code>String</code> to an equivalent <code>ScopeReferenceTriggerExportedOutputTerminal</code> object.
 	(ScopeReferenceTriggerExportedOutputTerminal to String)	Converts a <code>ScopeReferenceTriggerExportedOutputTerminal</code> object to an equivalent <code>String</code> .
 	Inequality	Checks whether two <code>ScopeReferenceTriggerExportedOutputTerminal</code> object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

ScopeReferenceTriggerExportedOutputTerminal Properties

The [ScopeReferenceTriggerExportedOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

ScopeReferenceTriggerExportedOutputTerminalAux0

Gets the output terminal for AUX I/O connector 0 PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
 Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
 NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Aux0Pfi1 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi1 As  

  ScopeReferenceTriggerExportedOutputTerminal  

  Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)
 A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#)
 "VAL_AUX_0_PFI_1".

See Also

ScopeReferenceTriggerExportedOutputTerminalAux0

Gets the output terminal for AUX I/O connector 0 PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
 Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
 NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Aux0Pfi2 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi2 As
ScopeReferenceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_2".

See Also

ScopeReferenceTriggerExportedOutputTerminalAux0

Gets the output terminal for AUX I/O connector 0 PFI 3.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Aux0Pfi3 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi3 As
ScopeReferenceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_3".

ScopeReferenceTriggerExportedOutputTerminalAux0

Gets the output terminal for AUX I/O connector 0 PFI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Aux0Pfi4 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi4 As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_4".

Gets the output terminal for AUX I/O connector 0 PFI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Aux0Pfi5 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi5 As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_5".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Aux0Pfi6 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi6 As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_6".

ScopeReferenceTriggerExportedOutputTerminalClock

Gets the output terminal for CLK OUT.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal ClockOut { get; }
```

```
Public Shared ReadOnly Property ClockOut As
ScopeReferenceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_CLK_OUT".

ScopeReferenceTriggerExportedOutputTerminalNoSource

Gets the output terminal for no source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As
ScopeReferenceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_0".

ScopeReferenceTriggerExportedOutputTerminalPxiStar

Gets the output terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PXI_STAR".

ScopeReferenceTriggerExportedOutputTerminal Properties

The [ScopeReferenceTriggerExportedOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.

 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

See Also

Reference

ScopeReferenceTriggerExportedOutputTerminalPfi0 Property

Gets the output terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As
    ScopeReferenceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_0".

ScopeReferenceTriggerExportedOutputTerminalPfi1 Property

Gets the output terminal for PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As
    ScopeReferenceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_1".

ScopeReferenceTriggerExportedOutputTerminalPfi2 Property

Gets the output terminal for PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As  
    ScopeReferenceTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_2".

ScopeReferenceTriggerExportedOutputTerminalPxiStar Property

Gets the output terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PXI_STAR".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Rtsi0 { get; }
```

```
Public Shared ReadOnly Property Rtsi0 As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_0".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Rtsi1 { get; }
```

```
Public Shared ReadOnly Property Rtsi1 As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_1".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Rtsi2 { get; }
```

```
Public Shared ReadOnly Property Rtsi2 As
ScopeReferenceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_2".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Rtsi3 { get; }
```

```
Public Shared ReadOnly Property Rtsi3 As
ScopeReferenceTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_3".

ScopeReferenceTriggerExportedOutputTerminalRtsi4 Property

Gets the output terminal for RTSI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Rtsi4 { get; }
```

```
Public Shared ReadOnly Property Rtsi4 As  
    ScopeReferenceTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_4".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal Rtsi5 { get; }
```

```
Public Shared ReadOnly Property Rtsi5 As  
ScopeReferenceTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

A [ScopeReferenceTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_5".

ScopeReferenceTriggerExportedOutputTerminal Methods

The [ScopeReferenceTriggerExportedOutputTerminal](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeReferenceTriggerExportedOutputTerminal and the specified object are equal.

		(Overrides ObjectEquals(Object).)
	Equals(ScopeReferenceTriggerExportedOutputTerminal)	Determines whether the current instance of ScopeReferenceTriggerExportedOutputTerminal and the specified ScopeReferenceTriggerExportedOutputTerminal object are equal.
 	FromString	Creates a ScopeReferenceTriggerExportedOutputTerminal object from the specified String .
	GetHashCode	Gets the hash code for the current instance of ScopeReferenceTriggerExportedOutputTerminal . (Overrides ObjectGetHashCode.)
	GetType	Gets the Type of the current instance. (Inherited from Object.)
	ToString	Converts the current instance of ScopeReferenceTriggerExportedOutputTerminal to String . (Overrides ObjectToString.)

ScopeReferenceTriggerExportedOutputTerminalEquals

Determines whether the current instance of [ScopeReferenceTriggerExportedOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (
    obj As Object
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeReferenceTriggerExportedOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReferenceTriggerExportedOutputTerminalFromString Method

Creates a [ScopeReferenceTriggerExportedOutputTerminal](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeReferenceTriggerExportedOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeReferenceTriggerExportedOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeReferenceTriggerExportedOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

Returns an object of type [ScopeReferenceTriggerExportedOutputTerminal](#) representing the specified source [String](#).

ScopeReferenceTriggerExportedOutputTerminalGetHashCode Method

Gets the hash code for the current instance of [ScopeReferenceTriggerExportedOutputTerminal](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeReferenceTriggerExportedOutputTerminal](#).

ScopeReferenceTriggerExportedOutputTerminal Operators and Type Conversions

The [ScopeReferenceTriggerExportedOutputTerminal](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeReferenceTriggerExportedOutputTerminal object instances are equal.

 (String to ScopeReferenceTriggerExportedOutputTerminal)	Converts a specified String to an equivalent ScopeReferenceTriggerExportedOutputTerminal object.
 (ScopeReferenceTriggerExportedOutputTerminal to String)	Converts a ScopeReferenceTriggerExportedOutputTerminal object to an equivalent String .
 Inequality	Checks whether two ScopeReferenceTriggerExportedOutputTerminal object instances are not equal.

ScopeReferenceTriggerExportedOutputTerminalEqual

Checks whether two [ScopeReferenceTriggerExportedOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeReferenceTriggerExportedOutputTerminal source1,
    ScopeReferenceTriggerExportedOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeReferenceTriggerExportedOutputTerminal,
    source2 As ScopeReferenceTriggerExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReferenceTriggerExportedOutputTerminal](#)
 Specifies the first [ScopeReferenceTriggerExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReferenceTriggerExportedOutputTerminal](#)
 Specifies the second [ScopeReferenceTriggerExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReferenceTriggerExportedOutputTerminalEquality Operator

Checks whether two [ScopeReferenceTriggerExportedOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeReferenceTriggerExportedOutputTerminal source1,
    ScopeReferenceTriggerExportedOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeReferenceTriggerExportedOutputTerminal,
    source2 As ScopeReferenceTriggerExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReferenceTriggerExportedOutputTerminal](#)
Specifies the first [ScopeReferenceTriggerExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReferenceTriggerExportedOutputTerminal](#)
Specifies the second [ScopeReferenceTriggerExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeReferenceTriggerExportedOutputTerminal Conversion (String to ScopeReferenceTriggerExportedOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeReferenceTriggerExportedOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public static implicit operator ScopeReferenceTriggerExportedOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (
    source As String
) As ScopeReferenceTriggerExportedOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeReferenceTriggerExportedOutputTerminal](#) object.

Return Value

Type: [ScopeReferenceTriggerExportedOutputTerminal](#)

Returns the [ScopeReferenceTriggerExportedOutputTerminal](#) object representing the specified [String](#).

    ScopeReferenceTriggerExportedOutputTerminal source2
)
```

```
Public Shared Operator <> (
    source1 As ScopeReferenceTriggerExportedOutputTerminal,
    source2 As ScopeReferenceTriggerExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReferenceTriggerExportedOutputTerminal](#)
Specifies the first [ScopeReferenceTriggerExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeReferenceTriggerExportedOutputTerminal](#)
Specifies the second [ScopeReferenceTriggerExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeRevisionQueryResult Structure

Represents the result of the revision query operation.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public struct ScopeRevisionQueryResult
```

```
Public Structure ScopeRevisionQueryResult
```

The `ScopeRevisionQueryResult` type exposes the following members.

Properties

	Name	Description
	FirmwareRevision	Gets a string that contains the firmware revision information for the NI-SCOPE instrument that you are currently using.
	InstrumentRevision	Gets a string that contains additional version information about NI-SCOPE driver.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether this instance of <code>ScopeRevisionQueryResult</code> and the object that you specify are equal. (Overrides ValueTypeEquals(Object) .)
 Equals(ScopeRevisionQueryResult)	Determines whether the current instance of <code>ScopeRevisionQueryResult</code> and the <code>ScopeRevisionQueryResult</code> object that you specify are equal.
 GetHashCode	Returns the hash code for <code>ScopeRevisionQueryResult</code> . (Overrides ValueTypeGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns the fully qualified type name of this instance. (Inherited from ValueType .)

[Top](#)

Operators

Name	Description
 Equality	Checks whether the two instances of <code>ScopeRevisionQueryResult</code> are equal.
 Inequality	Checks whether the two instances of <code>ScopeRevisionQueryResult</code> are unequal.

[Top](#)

Remarks

For more information, refer to [NI High-Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeRevisionQueryResultFirmwareRevision Property

Gets a string that contains the firmware revision information for the NI-SCOPE instrument that you are currently using.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public string FirmwareRevision { get; }
```

```
Public ReadOnly Property FirmwareRevision As String
    Get
```

Property Value

Type: [String](#)

A [String](#) containing the instrument firmware revision numbers.

ScopeRevisionQueryResultEquals Method (Object)

Determines whether this instance of [ScopeRevisionQueryResult](#) and the object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

The object to be compared to the current instance of [ScopeRevisionQueryResult](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeRevisionQueryResult result  
)
```

```
Public Function Equals (  
    result As ScopeRevisionQueryResult  
) As Boolean
```

Parameters

result

Type: [NationalInstruments.ModularInstruments.NIScopeScopeRevisionQueryResult](#)
The [ScopeRevisionQueryResult](#) object to be compared to the current instance of [ScopeRevisionQueryResult](#) to be compared.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeRevisionQueryResultEquality Operator

Checks whether the two instances of [ScopeRevisionQueryResult](#) are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public static bool operator ==(
    ScopeRevisionQueryResult result1,
    ScopeRevisionQueryResult result2
)
```

```
Public Shared Operator = (
    result1 As ScopeRevisionQueryResult,
```

```

        result2 As ScopeRevisionQueryResult
    ) As Boolean

```

Parameters

result1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeRevisionQueryResult](#)
A [ScopeRevisionQueryResult](#) object.

result2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeRevisionQueryResult](#)
A [ScopeRevisionQueryResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```

public static bool operator ==(
    ScopeRevisionQueryResult result1,

```

```

        ScopeRevisionQueryResult result2
    )

```

```

Public Shared Operator = (
    result1 As ScopeRevisionQueryResult,
    result2 As ScopeRevisionQueryResult
) As Boolean

```

Parameters

result1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeRevisionQueryResult](#)
A [ScopeRevisionQueryResult](#) object.

result2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeRevisionQueryResult](#)
A [ScopeRevisionQueryResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(
    ScopeRevisionQueryResult result1,
    ScopeRevisionQueryResult result2
)
```

```
Public Shared Operator <> (
    result1 As ScopeRevisionQueryResult,
    result2 As ScopeRevisionQueryResult
) As Boolean
```

Parameters

result1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeRevisionQueryResult](#)
A [ScopeRevisionQueryResult](#) object.

result2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeRevisionQueryResult](#)
A [ScopeRevisionQueryResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are unequal; otherwise, .

ScopeRisMethod Enumeration

Specifies the algorithm for random-interleaved sampling, which is used if the sample rate exceeds the maximum sampling rate.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeRisMethod
```

```
Public Enumeration ScopeRisMethod
```

Members

Member name	Value	Description
ExactNumberOfAverages	1	Acquires the specified number of records for each bin in the RIS acquisition.
MinimumNumberOfAverages	2	Averages each RIS sample of at least minimum number average randomly distributed points. Any extra points taken are also averaged in.
Incomplete	3	Returns the RIS waveform after the specified timeout even if it is incomplete.
LimitedBinWidth	5	Limits the waveforms in the various bins to be within 200 ps of the center of the bin.

ScopeRuntTrigger Class

Represents the sub-object that contains methods and properties used to configure common properties for runt triggering.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeRuntTrigger

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeRuntTrigger : ScopeSubObject,
    IIVI_ScopeTriggerRunt
```

```
Public NotInheritable Class ScopeRuntTrigger
    Inherits ScopeSubObject
    Implements IIVI_ScopeTriggerRunt
```

The ScopeRuntTrigger type exposes the following members.

Properties

Name	Description
 RuntPolarity	Gets or sets the polarity you want the digitizer to use for runt triggering
 ThresholdHigh	Gets or sets the upper voltage threshold you want the digitizer to use for runt triggering.
 ThresholdLow	Gets or sets the lower voltage threshold you want the digitizer to use for runt triggering.
 TimeCondition	Gets or sets the time condition you want the digitizer to use for time-qualified runt triggering.
 TimeHighLimit	Gets or sets the upper time limit you want the digitizer to use for time-qualified runt triggering.

 TimeLowLimit	Gets or sets the lower time limit you want the digitizer to use for time-qualified runt triggering.
--	---

[Top](#)

Methods

Name	Description
 Configure(String, Double, Double, Polarity)	Configures common properties for analog runt triggering.
 Configure(ScopeTriggerSource, Double, Double, ScopeTriggerPolarity, ScopeTriggerCoupling, PrecisionTimeSpan, PrecisionTimeSpan)	Configures common properties for analog runt triggering.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Trigger related topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeRuntTriggerRuntPolarity Property

Gets or sets the polarity you want the digitizer to use for runt triggering

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeTriggerPolarity RuntPolarity { get; set; }
```

```
Public Property RuntPolarity As ScopeTriggerPolarity
    Get
    Set
```

Property Value

Type: [ScopeTriggerPolarity](#)

The runt polarity you want the digitizer to use for runt triggering.

Exceptions

Exception	Condition
ObjectDisposedException	RuntPolarity was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The value for runt polarity was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer will trigger when the width polarity is positive, negative, or either.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ThresholdHigh { get; set; }
```

```
Public Property ThresholdHigh As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The upper voltage threshold you want the digitizer to use for runt triggering.

Exceptions

Exception	Condition
ObjectDisposedException	ThresholdHigh was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for upper threshold was invalid.

- or -

The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer will trigger when it is within the lower and upper threshold range, [ThresholdLow](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ThresholdLow { get; set; }
```

```
Public Property ThresholdLow As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The lower voltage threshold you want the digitizer to use for runt triggering.

Exceptions

Exception	Condition
ObjectDisposedException	ThresholdLow was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for lower threshold was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer will trigger when it is within the lower and upper threshold range, [ThresholdHigh](#).

Gets or sets the time condition you want the digitizer to use for time-qualified runt triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeRuntTriggerCondition TimeCondition { get; set; }
```

```
Public Property TimeCondition As ScopeRuntTriggerCondition
    Get
    Set
```

Property Value

Type: [ScopeRuntTriggerCondition](#)

The time condition you want the digitizer to use for time-qualified runt triggering.

Exceptions

Exception	Condition
ObjectDisposedException	TimeCondition was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for time condition was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer will trigger when it is within or outside the [TimeLowLimit](#) and [TimeHighLimit](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan TimeHighLimit { get; set; }
```

```
Public Property TimeHighLimit As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The upper time limit you want the digitizer to use for time-qualified runt triggering.

Exceptions

Exception	Condition
ObjectDisposedException	TimeHighLimit was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for upper time limit was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer will trigger based on the lower and upper time limit, [TimeLowLimit](#).

ScopeRuntTriggerTimeLowLimit Property

Gets or sets the lower time limit you want the digitizer to use for time-qualified runt triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan TimeLowLimit { get; set; }
```

```
Public Property TimeLowLimit As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The lower time limit you want the digitizer to use for time-qualified runt triggering.

Exceptions

Exception	Condition
ObjectDisposedException	TimeLowLimit was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for lower time limit was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer will trigger based on the lower and upper time limit, [TimeHighLimit](#).

ScopeRuntTrigger Properties

The [ScopeRuntTrigger](#) type exposes the following members.

Properties

Name	Description
 RuntPolarity	Gets or sets the polarity you want the digitizer to use for runt triggering
 ThresholdHigh	Gets or sets the upper voltage threshold you want the digitizer to use for runt triggering.
 ThresholdLow	Gets or sets the lower voltage threshold you want the digitizer to use for runt triggering.
 TimeCondition	Gets or sets the time condition you want the digitizer to use for time-qualified runt triggering.
 TimeHighLimit	Gets or sets the upper time limit you want the digitizer to use for time-qualified runt triggering.
 TimeLowLimit	Gets or sets the lower time limit you want the digitizer to use for time-qualified runt triggering.

ScopeRuntTriggerRuntPolarity Property

Gets or sets the polarity you want the digitizer to use for runt triggering

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeTriggerPolarity RuntPolarity { get; set; }
```

```
Public Property RuntPolarity As ScopeTriggerPolarity
    Get
    Set
```

Property Value

Type: [ScopeTriggerPolarity](#)

The runt polarity you want the digitizer to use for runt triggering.

Exceptions

Exception	Condition
ObjectDisposedException	RuntPolarity was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for runt polarity was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer will trigger when the width polarity is positive, negative, or either.

ScopeRuntTrigger Methods

The [ScopeRuntTrigger](#) type exposes the following members.

Methods

Name	Description
 Configure(String, Double, Double, Polarity)	Configures common properties for analog runt triggering.
 Configure(ScopeTriggerSource, Double, Double, ScopeTriggerPolarity, ScopeTriggerCoupling, PrecisionTimeSpan, PrecisionTimeSpan)	Configures common properties for analog runt triggering.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeRunTriggerConfigure Method (String, Double, Double, Polarity)

Configures common properties for analog runt triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public void Configure(
    string triggerSource,
    double triggerLowThreshold,
    double triggerHighThreshold,
    Polarity triggerPolarity
)
```

```
Public Sub Configure (
    triggerSource As String,
    triggerLowThreshold As Double,
    triggerHighThreshold As Double,
    triggerPolarity As Polarity
)
```

Parameters

triggerSource

Type: [SystemString](#)

The trigger source.

triggerLowThreshold

Type: [SystemDouble](#)

A value indicating the lower threshold for the runt to trigger, must be less than triggerHighThreshold.

triggerHighThreshold

Type: [SystemDouble](#)

A value indicating the higher threshold for the runt to trigger, must be greater than triggerLowThreshold.

triggerPolarity

Type: [Ivi.ScopePolarity](#)

The polarity that the width will trigger, either positive, negative, or either.

Implements

[IviScopeTriggerRuntConfigure\(String, Double, Double, Polarity\)](#)

Exceptions

Exception	Condition
-----------	-----------

ObjectDisposedException	Configure(String, Double, Double, Polarity) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	<p>The value for lower threshold was invalid. - or -</p> <p>The value for upper threshold was invalid. - or -</p> <p>The value for runt polarity was invalid. - or -</p> <p>The underlying NI-SCOPE driver returned an error.</p>

    triggerPolarity As ScopeTriggerPolarity,
    triggerCoupling As ScopeTriggerCoupling,
    triggerHoldoff As PrecisionTimeSpan,
    triggerDelay As PrecisionTimeSpan
)
```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)

The trigger source.

triggerLowThreshold

Type: [SystemDouble](#)

A value indicating the lower threshold for the runt to trigger.

triggerHighThreshold

Type: [SystemDouble](#)

A value indicating the higher threshold for the runt to trigger

triggerPolarity

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerPolarity](#)

The polarity that the width will trigger, either positive, negative, or either.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)

A value indicating whether to apply coupling and filtering options to the trigger signal.

triggerHoldoff

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

Type: NationalInstrumentsPrecisionTimeSpan

The length of time, in seconds, that the digitizer waits after receiving the trigger to start acquiring data.

Exceptions

Exception	Condition
ArgumentNullException	ScopeTriggerSource object passed in was null.
ObjectDisposedException	Configure(ScopeTriggerSource, Double, Double, ScopeTriggerPolarity, ScopeTriggerCoupling, PrecisionTimeSpan, PrecisionTimeSpan) was called after the associated NIScope or ScopeDriverUtility object was disposed.

ScopeRuntTriggerCondition Enumeration

Specifies whether a runt that is within or outside the high and low time limit triggers the oscilloscope.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public enum ScopeRunTriggerCondition
```

```
Public Enumeration ScopeRunTriggerCondition
```

Members

Member name	Value	Description
None	0	Do not use time-qualification for runt trigger.
Within	1	Width of runt is within time limits.
Outside	2	Width of runt is outside time limits.

Remarks

The end-user specifies the [TimeLowLimit](#) and [TimeHighLimit](#)

ScopeSampleClockExportedOutputTerminal Class

Represents the output terminal for [SampleClockOutputTerminal](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeSampleClockExportedOutputTerminal

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public sealed class ScopeSampleClockExportedOutputTerminal
```

```
Public NotInheritable Class ScopeSampleClockExportedOutputTerminal
```

The `ScopeSampleClockExportedOutputTerminal` type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of <code>ScopeSampleClockExportedOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeSampleClockExportedOutputTerminal)	Determines whether the current instance of <code>ScopeSampleClockExportedOutputTerminal</code> and the specified <code>ScopeSampleClockExportedOutputTerminal</code> object are equal.
 FromString 	Creates a <code>ScopeSampleClockExportedOutputTerminal</code> object from the specified <code>String</code> .
 GetHashCode	Gets the hash code for the current instance of <code>ScopeSampleClockExportedOutputTerminal</code> . (Overrides ObjectGetHashCode .)
 GetType	Gets the <code>Type</code> of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of <code>ScopeSampleClockExportedOutputTerminal</code> to <code>String</code> . (Overrides ObjectToString .)

[Top](#)

Operators

Name	Description
 Equality 	Checks whether two <code>ScopeSampleClockExportedOutputTerminal</code> object instances are equal.
 (String to ScopeSampleClockExportedOutputTerminal) 	Converts a specified <code>String</code> to an equivalent <code>ScopeSampleClockExportedOutputTerminal</code> object.
 (ScopeSampleClockExportedOutputTerminal to String) 	Converts a <code>ScopeSampleClockExportedOutputTerminal</code> object to an equivalent <code>String</code> .

	<u>Inequality</u>	Checks whether two <code>ScopeSampleClockExportedOutputTerminal</code> object instances are not equal.
---	-------------------	--

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeSampleClockExportedOutputTerminal Properties

The [ScopeSampleClockExportedOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.

 Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
 Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
 Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
 Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
 Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
 ClockOut	Gets the output terminal for CLK OUT.
 NoSource	Gets the output terminal for no source.
 Pfi0	Gets the output terminal for PFI 0.
 Pfi1	Gets the output terminal for PFI 1.
 Pfi2	Gets the output terminal for PFI 2.
 PxiStar	Gets the output terminal for PXI STAR.
 Rtsi0	Gets the output terminal for RTSI 0.
 Rtsi1	Gets the output terminal for RTSI 1.
 Rtsi2	Gets the output terminal for RTSI 2.
 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

ScopeSampleClockExportedOutputTerminalAux0Pfi0

Gets the output terminal for AUX I/O connector 0 PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal Aux0Pfi0 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi0 As  
ScopeSampleClockExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_0".

Gets the output terminal for AUX I/O connector 0 PFI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal Aux0Pfi7 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi7 As
ScopeSampleClockExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_7".

Gets the output terminal for CLK OUT.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal ClockOut { get; }
```

```
Public Shared ReadOnly Property ClockOut As  
ScopeSampleClockExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_CLK_OUT".

ScopeSampleClockExportedOutputTerminalNoSource

Gets the output terminal for no source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As  
ScopeSampleClockExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

ScopeSampleClockExportedOutputTerminal Properties

The [ScopeSampleClockExportedOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

Gets the output terminal for AUX I/O connector 0 PFI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal Aux0Pfi4 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi4 As  
ScopeSampleClockExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_4".

ScopeSampleClockExportedOutputTerminalAux0Pfi5 Property

Gets the output terminal for AUX I/O connector 0 PFI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal Aux0Pfi5 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi5 As  
ScopeSampleClockExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_5".

ScopeSampleClockExportedOutputTerminalAux0Pfi6 Property

Gets the output terminal for AUX I/O connector 0 PFI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal Aux0Pfi6 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi6 As  
ScopeSampleClockExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_6".

ScopeSampleClockExportedOutputTerminalAux0Pfi7 Property

Gets the output terminal for AUX I/O connector 0 PFI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal Aux0Pfi7 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi7 As
ScopeSampleClockExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_7".

ScopeSampleClockExportedOutputTerminalClockOut Property

Gets the output terminal for CLK OUT.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal ClockOut { get; }
```

```
Public Shared ReadOnly Property ClockOut As
ScopeSampleClockExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_CLK_OUT".

ScopeSampleClockExportedOutputTerminalNoSource Property

Gets the output terminal for no source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As  
ScopeSampleClockExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

ScopeSampleClockExportedOutputTerminalPfi0 Property

Gets the output terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeSampleClockExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_0".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeSampleClockExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_1".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeSampleClockExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_2".

ScopeSampleClockExportedOutputTerminalPxiStar Property

Gets the output terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As
    ScopeSampleClockExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

A [ScopeSampleClockExportedOutputTerminal](#) representing the [String](#) "VAL_PXI_STAR".

ScopeSampleClockExportedOutputTerminal Methods

The [ScopeSampleClockExportedOutputTerminal](#) type exposes the following members.

Methods

Name	Description
------	-------------

 Equals(Object)	Determines whether the current instance of ScopeSampleClockExportedOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeSampleClockExportedOutputTerminal)	Determines whether the current instance of ScopeSampleClockExportedOutputTerminal and the specified ScopeSampleClockExportedOutputTerminal object are equal.
 FromString 	Creates a ScopeSampleClockExportedOutputTerminal object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeSampleClockExportedOutputTerminal . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeSampleClockExportedOutputTerminal to String . (Overrides ObjectToString .)

ScopeSampleClockExportedOutputTerminalEquals M

Determines whether the current instance of [ScopeSampleClockExportedOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (
    obj As Object
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeSampleClockExportedOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSampleClockExportedOutputTerminalFromString Method

Creates a [ScopeSampleClockExportedOutputTerminal](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockExportedOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeSampleClockExportedOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeSampleClockExportedOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

Returns an object of type [ScopeSampleClockExportedOutputTerminal](#) representing the specified source [String](#).

[ScopeSampleClockExportedOutputTerminalGetHashCode Method](#)

Gets the hash code for the current instance of [ScopeSampleClockExportedOutputTerminal](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeSampleClockExportedOutputTerminal](#).

ScopeSampleClockExportedOutputTerminal Operators and Type Conversions

The [ScopeSampleClockExportedOutputTerminal](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeSampleClockExportedOutputTerminal object instances are equal.
	(String to ScopeSampleClockExportedOutputTerminal)	Converts a specified String to an equivalent ScopeSampleClockExportedOutputTerminal object.

 	(ScopeSampleClockExportedOutputTerminal to String)	Converts a ScopeSampleClockExportedOutputTerminal object to an equivalent String .
 	Inequality	Checks whether two ScopeSampleClockExportedOutputTerminal object instances are not equal.

ScopeSampleClockExportedOutputTerminalEquality

Checks whether two [ScopeSampleClockExportedOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeSampleClockExportedOutputTerminal source1,
    ScopeSampleClockExportedOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeSampleClockExportedOutputTerminal,
    source2 As ScopeSampleClockExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockExportedOutputTerminal](#)
 Specifies the first [ScopeSampleClockExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockExportedOutputTerminal](#)
 Specifies the second [ScopeSampleClockExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSampleClockExportedOutputTerminalEquality Operator

Checks whether two [ScopeSampleClockExportedOutputTerminal](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeSampleClockExportedOutputTerminal source1,
```

```
ScopeSampleClockExportedOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeSampleClockExportedOutputTerminal,
    source2 As ScopeSampleClockExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockExportedOutputTerminal](#)
 Specifies the first [ScopeSampleClockExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockExportedOutputTerminal](#)
 Specifies the second [ScopeSampleClockExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Name	Description
------	-------------

 	(String to ScopeSampleClockExportedOutputTerminal)	Converts a specified String to an equivalent ScopeSampleClockExportedOutputTerminal object.
 	(ScopeSampleClockExportedOutputTerminal to String)	Converts a ScopeSampleClockExportedOutputTerminal object to an equivalent String .

ScopeSampleClockExportedOutputTerminal Conversion (String to ScopeSampleClockExportedOutputTerminal)

Converts a specified [String](#) to an equivalent [ScopeSampleClockExportedOutputTerminal](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeSampleClockExportedOutputTerminal (
    string source
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeSampleClockExportedOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeSampleClockExportedOutputTerminal](#) object.

Return Value

Type: [ScopeSampleClockExportedOutputTerminal](#)

Returns the [ScopeSampleClockExportedOutputTerminal](#) object representing the specified [String](#).

ScopeSampleClockExportedOutputTerminal Conversion
(ScopeSampleClockExportedOutputTerminal to String)

Converts a [ScopeSampleClockExportedOutputTerminal](#) object to an equivalent [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator string (  
    ScopeSampleClockExportedOutputTerminal source  
)
```

```
Public Shared Widening Operator CType (  
    source As ScopeSampleClockExportedOutputTerminal  
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockExportedOutputTerminal](#)
Specifies the [ScopeSampleClockExportedOutputTerminal](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeSampleClockExportedOutputTerminal](#) object.

ScopeSampleClockExportedOutputTerminalInequality Operator

Checks whether two [ScopeSampleClockExportedOutputTerminal](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(  
    ScopeSampleClockExportedOutputTerminal source1,  
    ScopeSampleClockExportedOutputTerminal source2  
)
```

```
Public Shared Operator <> (  
    source1 As ScopeSampleClockExportedOutputTerminal,  
    source2 As ScopeSampleClockExportedOutputTerminal  
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockExportedOutputTerminal](#)
Specifies the first [ScopeSampleClockExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockExportedOutputTerminal](#)
Specifies the second [ScopeSampleClockExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeSampleClockTimebaseSource Class

Represents the source terminal for [SampleClockTimebaseSource](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeSampleClockTimebaseSource

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeSampleClockTimebaseSource
```

```
Public NotInheritable Class ScopeSampleClockTimebaseSource
```

The `ScopeSampleClockTimebaseSource` type exposes the following members.

Properties

	Name	Description
	ClockIn	Gets the source terminal for CLK IN.
	NoSource	Gets the source terminal for no source.
	Pfi0	Gets the source terminal for PFI 0.
	Pfi1	Gets the source terminal for PFI 1.

 S	Pfi2	Gets the source terminal for PFI 2.
 S	PxieDStarA	Gets the source terminal for PXIe DSTAR A.
 S	PxiStar	Gets the source terminal for PXI STAR.

[Top](#)

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of <code>ScopeSampleClockTimebaseSource</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeSampleClockTimebaseSource)	Determines whether the current instance of <code>ScopeSampleClockTimebaseSource</code> and the specified <code>ScopeSampleClockTimebaseSource</code> object are equal.
 S	FromString	Creates a <code>ScopeSampleClockTimebaseSource</code> object from the specified String .
	GetHashCode	Gets the hash code for the current instance of <code>ScopeSampleClockTimebaseSource</code> . (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of <code>ScopeSampleClockTimebaseSource</code> to String . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
 S	Equality	Checks whether two <code>ScopeSampleClockTimebaseSource</code> object instances are equal.
 S	(String to ScopeSampleClockTimebaseSource)	Converts a specified String to an equivalent <code>ScopeSampleClockTimebaseSource</code> object.
 S	(ScopeSampleClockTimebaseSource to String)	Converts a <code>ScopeSampleClockTimebaseSource</code> object to an equivalent String .

**Inequality**

Checks whether two `ScopeSampleClockTimebaseSource` object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeSampleClockTimebaseSource Properties

The [ScopeSampleClockTimebaseSource](#) type exposes the following members.

Properties

	Name	Description
	ClockIn	Gets the source terminal for CLK IN.
	NoSource	Gets the source terminal for no source.
	Pfi0	Gets the source terminal for PFI 0.
	Pfi1	Gets the source terminal for PFI 1.

 Pfi2	Gets the source terminal for PFI 2.
 PxieDStarA	Gets the source terminal for PXIe DSTAR A.
 PxiStar	Gets the source terminal for PXI STAR.

ScopeSampleClockTimebaseSourceClockIn Property

Gets the source terminal for CLK IN.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockTimebaseSource ClockIn { get; }
```

```
Public Shared ReadOnly Property ClockIn As ScopeSampleClockTimebaseSource  
    Get
```

Property Value

Type: [ScopeSampleClockTimebaseSource](#)

A [ScopeSampleClockTimebaseSource](#) representing the [String](#) "VAL_CLK_IN".

ScopeSampleClockTimebaseSource Methods

The [ScopeSampleClockTimebaseSource](#) type exposes the following members.

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeSampleClockTimebaseSource and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeSampleClockTimebaseSource)	Determines whether the current instance of ScopeSampleClockTimebaseSource and the specified ScopeSampleClockTimebaseSource object are equal.
 	FromString	Creates a ScopeSampleClockTimebaseSource object from the specified String .
	GetHashCode	Gets the hash code for the current instance of ScopeSampleClockTimebaseSource . (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of ScopeSampleClockTimebaseSource to String . (Overrides ObjectToString .)

ScopeSampleClockTimebaseSourceEquals Method (Object)

Determines whether the current instance of [ScopeSampleClockTimebaseSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeSampleClockTimebaseSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSampleClockTimebaseSourceEquals Method (ScopeSampleClockTimebaseSource)

Determines whether the current instance of [ScopeSampleClockTimebaseSource](#) and the specified [ScopeSampleClockTimebaseSource](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeSampleClockTimebaseSource source  
)
```

```
Public Function Equals (  
    source As ScopeSampleClockTimebaseSource  
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockTimebaseSource](#)
Specifies the [ScopeSampleClockTimebaseSource](#) object to compare to the current instance of [ScopeSampleClockTimebaseSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeSampleClockTimebaseSourceFromString Method

Creates a [ScopeSampleClockTimebaseSource](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeSampleClockTimebaseSource FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeSampleClockTimebaseSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeSampleClockTimebaseSource](#) object returned represents.

Return Value

Type: [ScopeSampleClockTimebaseSource](#)

Returns an object of type [ScopeSampleClockTimebaseSource](#) representing the specified source [String](#).

ScopeSampleClockTimebaseSourceGetHashCode Method

Gets the hash code for the current instance of [ScopeSampleClockTimebaseSource](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeSampleClockTimebaseSource](#).

ScopeSampleClockTimebaseSourceToString Method

Converts the current instance of [ScopeSampleClockTimebaseSource](#) to [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override string ToString()
```

```
Public Overrides Function ToString As String
```

Return Value

Type: [String](#)

Returns a [String](#) representing the current instance of [ScopeSampleClockTimebaseSource](#).

ScopeSampleClockTimebaseSource Operators and Type Conversions

The [ScopeSampleClockTimebaseSource](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeSampleClockTimebaseSource object instances are equal.
	(String to ScopeSampleClockTimebaseSource)	Converts a specified String to an equivalent ScopeSampleClockTimebaseSource object.
	(ScopeSampleClockTimebaseSource to String)	Converts a ScopeSampleClockTimebaseSource object to an equivalent String .
	Inequality	Checks whether two ScopeSampleClockTimebaseSource object instances are not equal.

ScopeSampleClockTimebaseSourceEquality Operator

Checks whether two [ScopeSampleClockTimebaseSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeSampleClockTimebaseSource source1,
    ScopeSampleClockTimebaseSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeSampleClockTimebaseSource,
    source2 As ScopeSampleClockTimebaseSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockTimebaseSource](#)
Specifies the first [ScopeSampleClockTimebaseSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockTimebaseSource](#)
Specifies the second [ScopeSampleClockTimebaseSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSampleClockTimebaseSourceEquality Operator

Checks whether two [ScopeSampleClockTimebaseSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeSampleClockTimebaseSource source1,
    ScopeSampleClockTimebaseSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeSampleClockTimebaseSource,
    source2 As ScopeSampleClockTimebaseSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockTimebaseSource](#)
Specifies the first [ScopeSampleClockTimebaseSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockTimebaseSource](#)
Specifies the second [ScopeSampleClockTimebaseSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSampleClockTimebaseSource Conversion (String to ScopeSampleClockTimebaseSource)

Converts a specified [String](#) to an equivalent [ScopeSampleClockTimebaseSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public static implicit operator ScopeSampleClockTimebaseSource (
    string source
)
```

```
Public Shared Widening Operator CType (
    source As String
) As ScopeSampleClockTimebaseSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeSampleClockTimebaseSource](#) object.

Return Value

Type: [ScopeSampleClockTimebaseSource](#)

Returns the [ScopeSampleClockTimebaseSource](#) object representing the specified [String](#).

ScopeSampleClockTimebaseSource Conversion (String to ScopeSampleClockTimebaseSource)

Converts a specified [String](#) to an equivalent [ScopeSampleClockTimebaseSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeSampleClockTimebaseSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeSampleClockTimebaseSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeSampleClockTimebaseSource](#) object.

Return Value

Type: [ScopeSampleClockTimebaseSource](#)

Returns the [ScopeSampleClockTimebaseSource](#) object representing the specified [String](#).

ScopeSampleClockTimebaseSource Conversion (ScopeSampleClockTimebaseSource to String)

Converts a [ScopeSampleClockTimebaseSource](#) object to an equivalent [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator string (  
    ScopeSampleClockTimebaseSource source  
)
```

```
Public Shared Widening Operator CType (  
    source As ScopeSampleClockTimebaseSource  
) As String
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockTimebaseSource](#)
Specifies the [ScopeSampleClockTimebaseSource](#) object to be converted to [String](#).

Return Value

Type: [String](#)

Returns the [String](#) representing the [ScopeSampleClockTimebaseSource](#) object.

ScopeSampleClockTimebaseSourceInequality Operator

Checks whether two [ScopeSampleClockTimebaseSource](#) object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(
    ScopeSampleClockTimebaseSource source1,
    ScopeSampleClockTimebaseSource source2
)
```

```
Public Shared Operator <> (
    source1 As ScopeSampleClockTimebaseSource,
    source2 As ScopeSampleClockTimebaseSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockTimebaseSource](#)
Specifies the first [ScopeSampleClockTimebaseSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSampleClockTimebaseSource](#)
Specifies the second [ScopeSampleClockTimebaseSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeSampleMode Enumeration

Specifies the sample mode the digitizer is currently using.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeSampleMode
```

```
Public Enumeration ScopeSampleMode
```

Members

Member name	Value	Description
Realtime	0	The digitizer is using real-time sampling.
EquivalentTime	1	The digitizer is using equivalent-time sampling.

ScopeScalarMeasurementStatistics Class

Maintains the measurement value and the statistical results.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeScalarMeasurementStatistics

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public class ScopeScalarMeasurementStatistics
```

```
Public Class ScopeScalarMeasurementStatistics
```

The `ScopeScalarMeasurementStatistics` type exposes the following members.

Properties

Name	Description
 Max	Gets the largest scalar value acquired in the most recent number of measurements.
 Mean	Gets or sets the mean scalar value of the measurement acquired.
 MeasurementResult	Gets the resulting measurement.
 Min	Gets the smallest scalar value acquired.
 StandardDeviation	Gets the standard deviation of the most recent measurements indicated by StatisticsCount .
 StatisticsCount	Gets the number of times FetchScalarMeasurementStatistics(PrecisionTimeSpan, ScopeScalarMeasurementType) has been called.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the [niScope_FetchMeasurementStats](#) topic in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

Syntax

[C#](#)[VB](#)

```
public enum ScopeScalarMeasurementType
```

```
Public Enumeration ScopeScalarMeasurementType
```

Members

Member name	Value	Description
-------------	-------	-------------

RiseTime	0	<p>The time span, in seconds, from when the waveform crosses the low reference level until it crosses the high reference level.</p> <p>The measurement starts at the left edge of the waveform and finds all low reference level crossings until a high reference level crossing. The final low reference level crossing is used in the calculation. The reference levels are specified by Low and High, and their default values are 10% and 90%.</p>
FallTime	1	<p>The time span, in seconds, from when the waveform crosses the high reference level until it crosses the low reference level. The measurement starts at the left edge of the waveform and finds all high reference level crossings until a low reference level crossing. The final high reference level crossing is used in the calculation.</p> <p>The reference levels are specified by Low and High, and their default values are 10% and 90%.</p>
Frequency	2	The value, in hertz, is 1.0 divided by the Period.
Period	3	<p>The time, in seconds, between the first and third mid reference level crosspoints in seconds. A hysteresis window is applied when finding crosspoints. The mid reference level is 50% by default and is set with Mid.</p>
VoltageRms	4	<p>The value, in volts RMS, determined by the following equation:</p> $\text{Voltage RMS} = \sqrt{(\text{waveform}[i]^2) / \text{numPoints}}$
VoltagePeakToPeak	5	The difference, in volts, of VoltageMax and VoltageMin.

VoltageMax	6	The waveform is searched for its maximum point in volts.
VoltageMin	7	The waveform is searched for the minimum point in volts.
VoltageHigh	8	The last histogram method is used where the voltage high result is the voltage, in volts, of the histogram bin with the maximum number of hits above 60% of the waveform's voltage peak-to-peak value. This calculation is useful for ignoring the overshoot and preshoot on square waves.
VoltageLow	9	The last acquisition histogram method is used where the voltage low result, in volts, is the voltage of the histogram bin with the maximum number of hits below 40% of the waveform's voltage peak-to-peak value. This calculation is useful for ignoring the overshoot and preshoot on square waves.
VoltageAverage	10	The value, in volts, determined by the following equation: Voltage Average = waveform[i] / numPoints
WidthNegative	11	The time difference, in seconds, between the first two mid reference level crossings, where the slopes are negative and positive, respectively. A digital hysteresis is used when finding the crosspoints.
WidthPositive	12	The time difference, in seconds, between the first two mid reference level crossings, where the slopes are positive and negative, respectively. A digital hysteresis is used when finding the crosspoints.
DutyCycleNegative	13	The value, in percentage, is the negative width divided by the 100 times period.

DutyCyclePositive	14	The value, in percentage, is WidthPositive divided by 100 times Period.
VoltageAmplitude	15	The difference of the VoltageHigh and the VoltageLow, in volts.
VoltageCycleRms	16	The number of points in a period, in volts RMS, calculated using the equation: $\text{pointsPerPeriod} = \text{int}(\text{period} / \text{dt} + 0.5)$ where dt is the time between two points and int is a function that returns the integer portion of a floating-point number.
VoltageCycleAverage	17	The number of points in a period in volts calculated using the following equation: $\text{pointsPerPeriod} = \text{int}(\text{period} / \text{dt} + 0.5)$ where dt is the time between two points, and int is a function that returns the integer portion of a floating-point number.
Overshoot	18	The measurement is done on the first edge of the waveform. If two edges exist, the algorithm finds the time interval from the first edge until one half the time to the second edge. The local maxima and minima are found in this interval. If only one edge is present in the waveform, the local maximum and minimum are found between the first edge and the end of the waveform. If the first edge is positive sloped, $\text{overshoot} = 100 * (\text{local maximum} - \text{voltage high}) / \text{voltage amplitude}.$ If the first edge is negative sloped, $\text{overshoot} = 100 * (\text{voltage low} - \text{local minimum}) / \text{voltage amplitude}.$
Preshoot	19	The measurement is done on the second edge of the waveform if two edges exist. The algorithm finds the time interval

		<p>from the middle time between the two edges until the second edge. The local maxima and minima are found in this interval. If only one edge is present in the waveform, the local maximum and minimum are found from the start of the waveform to the first edge.</p> <p>If the edge is negative sloped, preshoot = $100 * (\text{local maximum} - \text{voltage high}) / \text{voltage amplitude}$.</p> <p>If the edge is positive sloped, preshoot = $100 * (\text{voltage low} - \text{local minimum}) / \text{voltage amplitude}$.</p>
LowReferenceVolts	1000	The voltage, in volts, corresponding to the low reference level.
MidReferenceVolts	1001	The voltage, in volts, corresponding to the mid reference level.
HighReferenceVolts	1002	The voltage, in volts, corresponding to the high reference level.
Area	1003	Area = VoltageAverage * numPoints * delta time between two points, in volts*seconds.
CycleArea	1004	<p>Cycle area = voltage cycle average * pointsPerPeriod * dt where pointsPerPeriod is defined in the VoltageCycleAverage description.</p> <p>Units: Volt * Seconds</p>
Integral	1005	<p>Numerical integration is done using Simpson's rule.</p> <p>Units: Volt * Seconds</p>
VoltageBase	1006	<p>If the histogram bin corresponding to voltage low has over 5% of the total hits, the voltage low result is returned. Otherwise, the voltage minimum calculation is returned. This allows using the voltage base to get a reasonable answer for either a square wave</p>

		(ignoring the overshoot and preshoot) or a triangle wave (where a histogram fails). Units: Volts
VoltageTop	1007	If the histogram bin corresponding to VoltageHigh has over 5% of the total hits, the voltage high result is returned. Otherwise, the VoltageMax calculation is returned. This allows using the voltage top to get a reasonable answer for either a square wave (ignoring the overshoot and preshoot) or a triangle wave (where a histogram fails).
FftFrequency	1008	<p>The FFT amplitude spectrum is calculated using a split-radix real FFT, and the frequency, in hertz, corresponding to the maximum amplitude is returned.</p> <p>The FFT amplitude spectrum is calculated using a split-radix real FFT, and the frequency corresponding to the maximum amplitude is returned. If the input waveform size is not a power of two, the waveform is zero-padded to the next higher power of two. The frequency resolution is sampling rate / number of points.</p> <p>The DC bin of the FFT is ignored when searching for the maximum amplitude, so the FFT frequency should ignore any DC offsets. However, the zero-padding used in the FFT measurement can introduce other low-frequency components if the waveform has a large DC offset. To avoid problems, make sure the RecordLength is a power of 2, so no zero padding occurs. You can fetch this property using the RecordLength. Alternately, you can use AC coupling on the digitizer to solve the problem.</p>

FftAmplitude	1009	The FFT amplitude spectrum is calculated using a split-radix real FFT, and the maximum amplitude, in volts RMS, is returned. If the input waveform size is not a power of two, the waveform is zero-padded to the next higher power of two.
RiseSlewRate	1010	The HighReferenceVolts minus the LowReferenceVolts is divided by the RiseTime calculation. Units: Volts/second
FallSlewRate	1011	The value is LowReferenceVolts minus the HighReferenceVolts is divided by the fall-time calculation. The result is always negative. Units: Volts/second
ACEstimate	1012	The DC estimate is subtracted from the waveform, and a Hanning window is applied to give a processed waveform. The RMS voltage is calculated with the following equation: $\sqrt{ \left(\sum \text{processed waveform}[i]^2 \right) / \left(\text{numPoints} * \text{enbw} * \text{cg}^2 \right) },$ where the equivalent noise bandwidth (enbw) for the Hanning window is 1.5, and the coherent gain (cg) is 0.5. This algorithm minimizes the effect of an uneven number of waveform cycles in the measurement, which could arbitrarily increase or decrease the RMS value. Units: Volts RMS
DCEstimate	1013	A Hanning window is applied to give a processed waveform and the voltage average is calculated with the following equation: voltage average = (processed waveform[i]) / (cg * numPoints)

		where the coherent gain (cg) of the Hanning window is 0.5—the DC gain of the window. Units: Volts RMS
TimeDelay	1014	The algorithm finds the first time that the waveform from the channel specified by the channel parameter crosses its mid reference level. Next, the algorithm finds the first two times that the waveform from the channel OtherChannel crosses its mid reference level. The time delay is the time between two edges with the same slope. The mid reference level is stored on a per channel basis, and mid reference levels do not need to be the same. All reference levels use a digital hysteresis. Units: seconds
AveragePeriod	1015	Up to 256 mid reference level crossings are found on the waveform using a digital hysteresis. The time difference between the last crossing and the first crossing is divided by the number of periods found in the waveform. The last crossing is defined as the last crossing in the waveform with the same slope as the first crossing, so an integer number of periods exist in the waveform.
AverageFrequency	1016	The value is 1.0 divided by the AveragePeriod. Units: Hertz
VoltageBaseToTop	1017	The value ofVoltageTop minus VoltageBase.
PhaseDelay	1018	The time delay divided by the period, of the waveform on the channel specified by the measurement method, times 360 degrees. Units: Degrees

TimeHistogramMean	3000	The histogram mean = [(bin hits * bin value)] / total hits. The bin value is the center voltage value of the histogram bin.
TimeHistogramStandardDeviation	3001	Refer to the Time Hist Stdev topic in the NI-SCOPE Function Reference Help .
TimeHistogramPeakToPeak	3002	The difference, in volts, of the Histogram maximum from the the histogram minimum.
TimeHistogramMedian	3003	The bin value, in seconds, where half the histogram hits are above it and half the histogram hits are below.
TimeHistogramHits	3004	The number of points in the histogram.
TimeHistogramMax	3005	The highest bin value with at least one hit.
TimeHistogramMin	3006	The lowest bin value, in seconds, with at least one hit.
TimeHistogramMeanPlusStandardDeviation	3007	The percentage of hits in the histogram between mean minus the standard deviation and mean plus the standard deviation. The percentage is returned in the range 0–100.
TimeHistogramMeanPlus2StandardDeviation	3008	The percentage of hits in the histogram between the mean minus two times the standard deviation and the mean plus two times the standard deviation. The percentage is returned in the range 0–100.
TimeHistogramMeanPlus3StandardDeviation	3009	The percentage of hits in the histogram between the mean minus three times the standard deviation and the mean plus three times the standard deviation. The percentage is returned in the range 0–100.
TimeHistogramMode	3010	The bin value, in seconds, with the most hits. If there is a tie, the lower voltage or time value is returned.

TimeHistogramNewHits	3011	The number of points added to the histogram by the most recent acquisition.
VoltageHistogramMean	2000	The bin value is the center voltage value of the histogram bin. Histogram Mean = $[(\text{bin hits} * \text{bin value})] / \text{total hits}$.
VoltageHistogramStandardDeviation	2001	Refer to the Volt Hist Stdev topic in the NI-SCOPE Function Reference Help .
VoltageHistogramPeakToPeak	2002	The difference of the histogram maximum and the histogram minimum.
VoltageHistogramMedian	2003	The bin value, in volts, where half the histogram hits are above it and half the histogram hits are below.
VoltageHistogramHits	2004	The number of points in the histogram.
VoltageHistogramMax	2005	The highest bin value, in volts, with at least one hit.
VoltageHistogramMin	2006	The lowest bin value, in volts, with at least one hit.
VoltageHistogramMeanPlusStandardDeviation	2007	The percentage of hits in the histogram between mean minus the standard deviation and mean plus the standard deviation. The percentage is returned in the range 0–100.
VoltageHistogramMeanPlus2StandardDeviation	2008	The percentage of hits in the histogram between the mean minus two times the standard deviation and the mean plus two times the standard deviation. The percentage is returned in the range 0–100.
VoltageHistogramMeanPlus3StandardDeviation	2009	The percentage of hits in the histogram between the mean minus three times the standard deviation and the mean plus three times the standard deviation. The percentage is returned in the range 0–100.
VoltageHistogramMode	2010	The bin value, in volts, with the most hits. If there is a tie, the lower voltage or time value is returned.

VoltageHistogramNewHits	2011	The number of points added to the histogram by the most recent acquisition.

ScopeSelfCalibration Class

Represents methods related to self calibration.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeSelfCalibration

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeSelfCalibration : ScopeSubObject
```

```
Public NotInheritable Class ScopeSelfCalibration
    Inherits ScopeSubObject
```

The ScopeSelfCalibration type exposes the following members.

Properties

Name	Description
------	-------------

 SelfCalibrationDate	Gets the last self-calibration date.
 SelfCalibrationTemperature	Gets the onboard temperature of the digitizer at the time of self-calibration.

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 SelfCalibrate	Self-calibrates the digitizer.
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Calibration topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeSelfTestResult Structure

Represents the result of [SelfTest](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public struct ScopeSelfTestResult
```

```
Public Structure ScopeSelfTestResult
```

The `ScopeSelfTestResult` type exposes the following members.

Properties

	Name	Description
	Code	Gets the numeric result from the SelfTest operation.
	Message	Gets the string returned from the instrument SelfTest .

Top

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of the <code>ScopeSelfTestResult</code> object and the object that you specify are equal. (Overrides ValueTypeEquals(Object) .)
	Equals(ScopeSelfTestResult)	Determines whether the current instance of <code>ScopeSelfTestResult</code> and the <code>ScopeSelfTestResult</code> object that you specify are equal.
	GetHashCode	Returns the hash code for <code>ScopeSelfTestResult</code> . (Overrides ValueTypeGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns the fully qualified type name of this instance. (Inherited from ValueType .)

Top

Operators

	Name	Description
	Equality	Checks whether the two instances of <code>ScopeSelfTestResult</code> are equal.
	Inequality	Checks whether the two instances of <code>ScopeSelfTestResult</code> are unequal.

ScopeSelfTestResultEquals Method (Object)

Determines whether the current instance of the [ScopeSelfTestResult](#) object and the object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

The object to be compared to the current instance of the [ScopeSelfTestResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSelfTestResultEquals Method (Object)

Determines whether the current instance of the [ScopeSelfTestResult](#) object and the object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

The object to be compared to the current instance of the [ScopeSelfTestResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSelfTestResultEquals Method (ScopeSelfTestResult)

Determines whether the current instance of [ScopeSelfTestResult](#) and the [ScopeSelfTestResult](#) object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeSelfTestResult result  
)
```

```
Public Function Equals (  
    result As ScopeSelfTestResult  
) As Boolean
```

Parameters

result

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSelfTestResult](#)
The [ScopeSelfTestResult](#) object to be compared to the current instance of [ScopeSelfTestResult](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeSelfTestResultEquals Method (Object)

Determines whether the current instance of the [ScopeSelfTestResult](#) object and the object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

The object to be compared to the current instance of the [ScopeSelfTestResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

ScopeSelfTestResultEquals Method (Object)

Determines whether the current instance of the [ScopeSelfTestResult](#) object and the object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

The object to be compared to the current instance of the [ScopeSelfTestResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSelfTestResultEquals Method (ScopeSelfTestResult)

Determines whether the current instance of [ScopeSelfTestResult](#) and the [ScopeSelfTestResult](#) object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeSelfTestResult result  
)
```

```
Public Function Equals (  
    result As ScopeSelfTestResult  
) As Boolean
```

Parameters

result

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSelfTestResult](#)
The [ScopeSelfTestResult](#) object to be compared to the current instance of [ScopeSelfTestResult](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSelfTestResultGetHashCode Method

Returns the hash code for [ScopeSelfTestResult](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

An [Int32](#) containing the hash code for [ScopeSelfTestResult](#).

ScopeSelfTestResultEquality Operator

Checks whether the two instances of [ScopeSelfTestResult](#) are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public static bool operator ==(
    ScopeSelfTestResult result1,
    ScopeSelfTestResult result2
)
```

```
Public Shared Operator = (
    result1 As ScopeSelfTestResult,
    result2 As ScopeSelfTestResult
) As Boolean
```

Parameters

result1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSelfTestResult](#)
A [ScopeSelfTestResult](#) object.

result2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSelfTestResult](#)
A [ScopeSelfTestResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeSelfTestResult result1,
    ScopeSelfTestResult result2
)
```

```
Public Shared Operator = (  
    result1 As ScopeSelfTestResult,  
    result2 As ScopeSelfTestResult  
) As Boolean
```

Parameters

result1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSelfTestResult](#)
A [ScopeSelfTestResult](#) object.

result2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSelfTestResult](#)
A [ScopeSelfTestResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSelfTestResultInequality Operator

Checks whether the two instances of [ScopeSelfTestResult](#) are unequal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public static bool operator !=(
    ScopeSelfTestResult result1,
    ScopeSelfTestResult result2
)
```

```
Public Shared Operator <> (
    result1 As ScopeSelfTestResult,
    result2 As ScopeSelfTestResult
) As Boolean
```

Parameters

result1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSelfTestResult](#)
A [ScopeSelfTestResult](#) object.

result2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeSelfTestResult](#)
A [ScopeSelfTestResult](#) object.

Return Value

Type: [Boolean](#)

if the two instances are unequal; otherwise, .

ScopeSignalSource Enumeration

Contains values representing signals to use with [ExportSignal\(ScopeSignalSource, String\)](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeSignalSource
```

```
Public Enumeration ScopeSignalSource
```

Members

Member name	Value	Description
None	0	Do not generate a digital pulse.
StartTrigger	2	Generate a pulse when detecting a start trigger.
AdvanceTrigger	5	Generate a pulse when detecting an advance trigger.
ReferenceTrigger	1	Generate a pulse when detecting the stop/reference trigger.
EndOfRecordEvent	4	Generate a pulse at the end of the record.
EndOfAcquisitionEvent	3	Generate a pulse when the acquisition finishes.
ReadyForStartEvent	7	Asserts when the digitizer is initiated and ready to accept a start trigger and begin sampling.
ReadyForAdvanceEvent	6	Asserts when the digitizer is ready to advance to the next record.
ReadyForReferenceEvent	10	Asserts when the digitizer is ready to accept a reference trigger.
ReferenceClock	100	Export the reference clock for the digitizer to the specified terminal.
SampleClock	101	Export the sample clock for the digitizer to the specified terminal.
FiveVoltPower	13	Exports a 5 V power source.

ScopeStartTrigger Class

Represents the ScopeStartTrigger sub-objects that contain properties related to the Start trigger.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeStartTrigger

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeStartTrigger : ScopeSubObject
```

```
Public NotInheritable Class ScopeStartTrigger
    Inherits ScopeSubObject
```

The ScopeStartTrigger type exposes the following members.

Properties

Name	Description
 DigitalEdge	Gets the parameters for properties and sub-objects that are related to digital edge start triggers.

Top

Methods

Name	Description
------	-------------

 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 SendSoftwareEdgeTrigger	Sends the Start Trigger to the digitizer. Call this method if Source has been configured to SoftwareTriggerFunction .
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Trigger related topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeStartTriggerExportedOutputTerminal Class

Represents the start trigger exported output terminal for [StartTriggerOutputTerminal](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeStartTriggerExportedOutputTerminal

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeStartTriggerExportedOutputTerminal
```

```
Public NotInheritable Class ScopeStartTriggerExportedOutputTerminal
```

The `ScopeStartTriggerExportedOutputTerminal` type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.

 Rtsi3	Gets the output terminal for RTSI 3.
 Rtsi4	Gets the output terminal for RTSI 4.
 Rtsi5	Gets the output terminal for RTSI 5.
 Rtsi6	Gets the output terminal for RTSI 6.
 Rtsi7	Gets the output terminal for RTSI 7.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of <code>ScopeStartTriggerExportedOutputTerminal</code> and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeStartTriggerExportedOutputTerminal)	Determines whether the current instance of <code>ScopeStartTriggerExportedOutputTerminal</code> and the specified <code>ScopeStartTriggerExportedOutputTerminal</code> object are equal.
 FromString 	Creates a <code>ScopeStartTriggerExportedOutputTerminal</code> object from the specified <code>String</code> .
 GetHashCode	Gets the hash code for the current instance of <code>ScopeStartTriggerExportedOutputTerminal</code> . (Overrides ObjectGetHashCode .)
 GetType	Gets the <code>Type</code> of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of <code>ScopeStartTriggerExportedOutputTerminal</code> to <code>String</code> . (Overrides ObjectToString .)

[Top](#)

Operators

Name	Description
------	-------------

 	Equality	Checks whether two <code>ScopeStartTriggerExportedOutputTerminal</code> object instances are equal.
 	(String to <code>ScopeStartTriggerExportedOutputTerminal</code>)	Converts a specified <code>String</code> to an equivalent <code>ScopeStartTriggerExportedOutputTerminal</code> object.
 	(<code>ScopeStartTriggerExportedOutputTerminal</code> to String)	Converts a <code>ScopeStartTriggerExportedOutputTerminal</code> object to an equivalent <code>String</code> .
 	Inequality	Checks whether two <code>ScopeStartTriggerExportedOutputTerminal</code> object instances are not equal.

[Top](#)

Remarks

ScopeStartTriggerExportedOutputTerminal Properties

The [ScopeStartTriggerExportedOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

ScopeStartTriggerExportedOutputTerminalAux0Pfi5

Gets the output terminal for AUX I/O connector 0 PFI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Aux0Pfi5 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi5 As  
ScopeStartTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_5".

ScopeStartTriggerExportedOutputTerminalAux0Pfi6

Gets the output terminal for AUX I/O connector 0 PFI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Aux0Pfi6 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi6 As  
ScopeStartTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_AUX_0_PFI_6".

ScopeStartTriggerExportedOutputTerminalAux0Pfi7

Gets the output terminal for AUX I/O connector 0 PFI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
 Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
 NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Aux0Pfi7 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi7 As  
ScopeStartTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)
 A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#)
 "VAL_AUX_0_PFI_7".

ScopeStartTriggerExportedOutputTerminalClockOut

Gets the output terminal for CLK OUT.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
 Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
 NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal ClockOut { get; }
```

```
Public Shared ReadOnly Property ClockOut As
ScopeStartTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_CLK_OUT".

ScopeStartTriggerExportedOutputTerminalNoSource

Gets the output terminal for no source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal NoSource { get; }
```

```
Public Shared ReadOnly Property NoSource As
ScopeStartTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_NO_SOURCE".

ScopeStartTriggerExportedOutputTerminalPfi0 Property

Gets the output terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeStartTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_0".

ScopeStartTriggerExportedOutputTerminalPfi1 Property

Gets the output terminal for PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeStartTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_1".

ScopeStartTriggerExportedOutputTerminalPfi2 Property

Gets the output terminal for PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeStartTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PFI_2".

ScopeStartTriggerExportedOutputTerminalPxiStar Pr

Gets the output terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As  
ScopeStartTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PXI_STAR".

ScopeStartTriggerExportedOutputTerminalRtSi0 Prop

Gets the output terminal for RTSI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi0 { get; }
```

```
Public Shared ReadOnly Property Rtsi0 As ScopeStartTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_0".

ScopeStartTriggerExportedOutputTerminalRtsi1 Prop

Gets the output terminal for RTSI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi1 { get; }
```

```
Public Shared ReadOnly Property Rtsi1 As ScopeStartTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_1".

ScopeStartTriggerExportedOutputTerminalRtsi2 Prop

Gets the output terminal for RTSI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi2 { get; }
```

```
Public Shared ReadOnly Property Rtsi2 As ScopeStartTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_2".

ScopeStartTriggerExportedOutputTerminalRtsi3 Prop

Gets the output terminal for RTSI 3.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi3 { get; }
```

```
Public Shared ReadOnly Property Rtsi3 As ScopeStartTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_3".

ScopeStartTriggerExportedOutputTerminalRtsi4 Prop

Gets the output terminal for RTSI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi4 { get; }
```

```
Public Shared ReadOnly Property Rtsi4 As ScopeStartTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTISI_4".

ScopeStartTriggerExportedOutputTerminalRtsi5 Prop

Gets the output terminal for RTSI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi5 { get; }
```

```
Public Shared ReadOnly Property Rtsi5 As ScopeStartTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_5".

ScopeStartTriggerExportedOutputTerminalRtsi6 Prop

Gets the output terminal for RTSI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi6 { get; }
```

```
Public Shared ReadOnly Property Rtsi6 As ScopeStartTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_6".

ScopeStartTriggerExportedOutputTerminalRtsi7 Property

Gets the output terminal for RTSI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi7 { get; }
```

```
Public Shared ReadOnly Property Rtsi7 As ScopeStartTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_7".

ScopeStartTriggerExportedOutputTerminal Properties

The [ScopeStartTriggerExportedOutputTerminal](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the output terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the output terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the output terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the output terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the output terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the output terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the output terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the output terminal for AUX I/O connector 0 PFI 7.
	ClockOut	Gets the output terminal for CLK OUT.
	NoSource	Gets the output terminal for no source.
	Pfi0	Gets the output terminal for PFI 0.
	Pfi1	Gets the output terminal for PFI 1.
	Pfi2	Gets the output terminal for PFI 2.
	PxiStar	Gets the output terminal for PXI STAR.
	Rtsi0	Gets the output terminal for RTSI 0.
	Rtsi1	Gets the output terminal for RTSI 1.
	Rtsi2	Gets the output terminal for RTSI 2.
	Rtsi3	Gets the output terminal for RTSI 3.
	Rtsi4	Gets the output terminal for RTSI 4.
	Rtsi5	Gets the output terminal for RTSI 5.
	Rtsi6	Gets the output terminal for RTSI 6.
	Rtsi7	Gets the output terminal for RTSI 7.

Gets the output terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As  
ScopeStartTriggerExportedOutputTerminal  
Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_PXI_STAR".

ScopeStartTriggerExportedOutputTerminalRtsi0 Property

Gets the output terminal for RTSI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi0 { get; }
```

```
Public Shared ReadOnly Property Rtsi0 As ScopeStartTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_0".

ScopeStartTriggerExportedOutputTerminalRtsi1 Property

Gets the output terminal for RTSI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi1 { get; }
```

```
Public Shared ReadOnly Property Rtsi1 As ScopeStartTriggerExportedOutputTerminal
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_1".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi2 { get; }
```

```
Public Shared ReadOnly Property Rtsi2 As ScopeStartTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_2".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal Rtsi3 { get; }
```

```
Public Shared ReadOnly Property Rtsi3 As ScopeStartTriggerExportedOutputTerminal  
    Get
```

Property Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

A [ScopeStartTriggerExportedOutputTerminal](#) representing the [String](#) "VAL_RTSI_3".

ScopeStartTriggerExportedOutputTerminal Methods

The [ScopeStartTriggerExportedOutputTerminal](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeStartTriggerExportedOutputTerminal and the specified object are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeStartTriggerExportedOutputTerminal)	Determines whether the current instance of ScopeStartTriggerExportedOutputTerminal and the specified ScopeStartTriggerExportedOutputTerminal object are equal.
 FromString 	Creates a ScopeStartTriggerExportedOutputTerminal object from the specified String .
 GetHashCode	Gets the hash code for the current instance of ScopeStartTriggerExportedOutputTerminal . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeStartTriggerExportedOutputTerminal to String . (Overrides ObjectToString .)

ScopeStartTriggerExportedOutputTerminalEquals Me

Determines whether the current instance of [ScopeStartTriggerExportedOutputTerminal](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeStartTriggerExportedOutputTerminal](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeStartTriggerExportedOutputTerminal FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeStartTriggerExportedOutputTerminal
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeStartTriggerExportedOutputTerminal](#) object returned represents.

Return Value

Type: [ScopeStartTriggerExportedOutputTerminal](#)

Returns an object of type [ScopeStartTriggerExportedOutputTerminal](#) representing the specified source [String](#).

ScopeStartTriggerExportedOutputTerminal Operators and Type Conversions

The [ScopeStartTriggerExportedOutputTerminal](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeStartTriggerExportedOutputTerminal object instances are equal.

	(String to ScopeStartTriggerExportedOutputTerminal)	Converts a specified String to an equivalent ScopeStartTriggerExportedOutputTerminal object.
	(ScopeStartTriggerExportedOutputTerminal to String)	Converts a ScopeStartTriggerExportedOutputTerminal object to an equivalent String .
	Inequality	Checks whether two ScopeStartTriggerExportedOutputTerminal object instances are not equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeStartTriggerExportedOutputTerminal source1,
    ScopeStartTriggerExportedOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeStartTriggerExportedOutputTerminal,
    source2 As ScopeStartTriggerExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeStartTriggerExportedOutputTerminal](#)
 Specifies the first [ScopeStartTriggerExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeStartTriggerExportedOutputTerminal](#)
 Specifies the second [ScopeStartTriggerExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeStartTriggerExportedOutputTerminal source1,
    ScopeStartTriggerExportedOutputTerminal source2
)
```

```
Public Shared Operator = (
    source1 As ScopeStartTriggerExportedOutputTerminal,
    source2 As ScopeStartTriggerExportedOutputTerminal
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeStartTriggerExportedOutputTerminal](#)
Specifies the first [ScopeStartTriggerExportedOutputTerminal](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeStartTriggerExportedOutputTerminal](#)
Specifies the second [ScopeStartTriggerExportedOutputTerminal](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeSubObject Class

Represents the base class for all configuration sub-objects. This is an internal class and is not intended for external use.

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

[More...](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public abstract class ScopeSubObject
```

```
Public MustInherit Class ScopeSubObject
```

The ScopeSubObject type exposes the following members.

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

Contains members that are common to all sub-object NI-Scope classes. This is an internal class and is not intended for external use.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeSubObject Methods

The [ScopeSubObject](#) type exposes the following members.

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeTiming Class

Represents the [ScopeMeasurement](#) sub-object that contains properties related to timing.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeTiming](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeTiming : ScopeSubObject
```

```
Public NotInheritable Class ScopeTiming
    Inherits ScopeSubObject
```

The ScopeTiming type exposes the following members.

Properties

Name	Description
 AbsoluteSampleClockOffset	Gets or sets the absolute time offset of the sample clock relative to the reference clock.
 ClockSynchronizationPulseSource	Gets or sets the clock synchronization pulse source.
 EnforceRealtime	Gets or sets whether the digitizer enforces real-time measurements or allows equivalent-time measurements.
 FractionalResample	Gets the ScopeFractionalResample sub-object that you use to configure fractional resampling on the high speed digitizer.
 MoreRecordsThanMemoryAllowed	Gets or sets whether more records can be configured with NumberOfRecordsToAcquire than fit in the onboard memory.
 NumberOfRecordsToAcquire	Gets or sets the number of records to acquire. Can be used for multirecord acquisitions and single record acquisitions. Setting this property to 1 indicates a single record acquisition.
 OnboardMemorySize	Gets the total combined amount of onboard memory for all channels in bytes.
 OscillatorPhaseDac	Gets or sets the binary phase DAC value that controls the delay added to the Phase Locked Loop (PLL) of the sample clock.

 PllLockStatus	Gets whether the PLL has remained locked/unlocked to the external reference clock since it was last checked.
 PollInterval	Gets or sets the poll interval to use during RIS acquisitions to check whether the acquisition is complete.
 RealtimeSampleRateMax	Gets the maximum real-time sample rate, in Hz.
 ReferenceClockRate	Gets or sets the frequency, in hertz, of the input, or reference clock, to which the internal sample clock timbase is synchronized if ReferenceClockSource is an external source.
 ReferenceClockSource	Gets or sets the input source for the PLL reference clock to which the digitizer will be phase-locked.
 RisAverages	Gets or sets the number of averages for each bin in an RIS acquisition.
 RisMethod	Gets or sets the algorithm for random-interleaved sampling, which is used if the sample rate exceeds the value of RealtimeSampleRateMax .
 RisRateMax	Gets the maximum sample rate in RIS mode, in Hz.
 SampleClockTimebaseDivisor	Gets or sets the ratio between the SampleClockTimebaseRate and the SampleRate (which can be slower) if SampleClockTimebaseSource is an external source.
 SampleClockTimebaseMultiplier	If SampleClockTimebaseSource is an external source, this attribute specifies the ratio between the SampleClockTimebaseRate and the SampleRate , which can be higher. This property can be used in conjunction with the SampleClockTimebaseDivisor attribute. Some instruments use multiple ADCs to sample the same channel at an effective sample rate that is greater than the specified clock rate. When providing an external sample clock use this property to indicate when you want a higher sample rate. Valid values for this attribute vary by instrument and current configuration.
 SampleClockTimebaseRate	Gets or sets the frequency, in hertz, of the external clock used as the timebase source if SampleClockTimebaseSource is an external source or, if the timebase source is the internal clock for oscilloscopes that support multiple onboard clock rates, of the internal clock.

	SampleClockTimebaseSource	Gets or sets the source of the sample clock timebase, which is the timebase used to control waveform sampling. The SampleRate may be the timebase itself or a divided version of the timebase, depending on the SampleRateMin (for internal sources) or the SampleClockTimebaseDivisor and SampleClockTimebaseMultiplier (for external sources).
--	---	--

[Top](#)

Methods

	Name	Description
	AdjustSampleClockRelativeDelay	Configures the relative sample clock delay in seconds when using the internal clock. Each time this method is called, the sample clock is delayed by the specified amount of time.
	ConfigureClock	Configures the properties for synchronizing the digitizer to a reference or sending the digitizer's reference clock output to be used as a synchronizing clock for other digitizers.
	ConfigureTiming	Configures the common properties of the horizontal subsystem for a multirecord acquisition in terms of minimum sample rate.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Horizontal attributes topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeTiming Properties

The [ScopeTiming](#) type exposes the following members.

Properties

Name	Description
 AbsoluteSampleClockOffset	Gets or sets the absolute time offset of the sample clock relative to the reference clock.
 ClockSynchronizationPulseSource	Gets or sets the clock synchronization pulse source.
 EnforceRealtime	Gets or sets whether the digitizer enforces real-time measurements or allows equivalent-time measurements.
 FractionalResample	Gets the ScopeFractionalResample sub-object that you use to configure fractional resampling on the high speed digitizer.
 MoreRecordsThanMemoryAllowed	Gets or sets whether more records can be configured with NumberOfRecordsToAcquire than fit in the onboard memory.
 NumberOfRecordsToAcquire	Gets or sets the number of records to acquire. Can be used for multirecord acquisitions and single record acquisitions. Setting this property to 1 indicates a single record acquisition.

 OnboardMemorySize	Gets the total combined amount of onboard memory for all channels in bytes.
 OscillatorPhaseDac	Gets or sets the binary phase DAC value that controls the delay added to the Phase Locked Loop (PLL) of the sample clock.
 PllLockStatus	Gets whether the PLL has remained locked/unlocked to the external reference clock since it was last checked.
 PollInterval	Gets or sets the poll interval to use during RIS acquisitions to check whether the acquisition is complete.
 RealtimeSampleRateMax	Gets the maximum real-time sample rate, in Hz.
 ReferenceClockRate	Gets or sets the frequency, in hertz, of the input, or reference clock, to which the internal sample clock timbase is synchronized if ReferenceClockSource is an external source.
 ReferenceClockSource	Gets or sets the input source for the PLL reference clock to which the digitizer will be phase-locked.
 RisAverages	Gets or sets the number of averages for each bin in an RIS acquisition.
 RisMethod	Gets or sets the algorithm for random-interleaved sampling, which is used if the sample rate exceeds the value of RealtimeSampleRateMax .
 RisRateMax	Gets the maximum sample rate in RIS mode, in Hz.
 SampleClockTimebaseDivisor	Gets or sets the ratio between the SampleClockTimebaseRate and the SampleRate (which can be slower) if SampleClockTimebaseSource is an external source.
 SampleClockTimebaseMultiplier	If SampleClockTimebaseSource is an external source, this attribute specifies the ratio between the SampleClockTimebaseRate and the SampleRate , which can be higher. This property can be used in conjunction with the SampleClockTimebaseDivisor attribute. Some instruments use multiple ADCs to sample the same channel at an effective sample rate that is greater than the specified clock rate. When providing an external sample clock use this property to indicate when you want a higher sample rate. Valid values for this attribute vary by instrument and current configuration.
 SampleClockTimebaseRate	Gets or sets the frequency, in hertz, of the external clock used as the timebase source if

		SampleClockTimebaseSource is an external source or, if the timebase source is the internal clock for oscilloscopes that support multiple onboard clock rates, of the internal clock.
	SampleClockTimebaseSource	Gets or sets the source of the sample clock timebase, which is the timebase used to control waveform sampling. The SampleRate may be the timebase itself or a divided version of the timebase, depending on the SampleRateMin (for internal sources) or the SampleClockTimebaseDivisor and SampleClockTimebaseMultiplier (for external sources).

ScopeTimingAbsoluteSampleClockOffset Property

Gets or sets the absolute time offset of the sample clock relative to the reference clock.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan AbsoluteSampleClockOffset { get; set; }
```

```
Public Property AbsoluteSampleClockOffset As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The absolute time offset of the sample clock relative to the reference clock.

Exceptions

Exception	Condition
ObjectDisposedException	AbsoluteSampleClockOffset was accessed after associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Configures the sample clock relationship with respect to the reference clock. This parameter is factored into NI-TClk adjustments and is typically used to improve the repeatability of NI-TClk Synchronization. When this parameter is read, the currently programmed value is returned. The range of the absolute sample clock offset is [-0.5 sample clock periods, 0.5 sample clock periods]. The default absolute sample clock offset is 0 s.

ScopeTimingAbsoluteSampleClockOffset Property

Gets or sets the absolute time offset of the sample clock relative to the reference clock.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan AbsoluteSampleClockOffset { get; set; }
```

```
Public Property AbsoluteSampleClockOffset As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The absolute time offset of the sample clock relative to the reference clock.

Exceptions

Exception	Condition
ObjectDisposedException	AbsoluteSampleClockOffset was accessed after associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Configures the sample clock relationship with respect to the reference clock. This parameter is factored into NI-TClk adjustments and is typically used to improve the repeatability of NI-TClk Synchronization. When this parameter is read, the currently programmed value is returned. The range of the absolute sample clock offset is [-0.5

sample clock periods, 0.5 sample clock periods]. The default absolute sample clock offset is 0 s.

ScopeTimingClockSynchronizationPulseSource Property

Gets or sets the clock synchronization pulse source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeClockSynchronizationPulseSource ClockSynchronizationPulseSource
{ get; set; }
```

```
Public Property ClockSynchronizationPulseSource As
ScopeClockSynchronizationPulseSource
    Get
    Set
```

Property Value

Type: [ScopeClockSynchronizationPulseSource](#)

The clock synchronization pulse source.

Exceptions

Exception	Condition
ObjectDisposedException	ClockSynchronizationPulseSource was accessed after associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

This line should be the same for all instruments to be synchronized.

ScopeTimingEnforceRealtime Property

Gets or sets whether the digitizer enforces real-time measurements or allows equivalent-time measurements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool EnforceRealtime { get; set; }
```

```
Public Property EnforceRealtime As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

The default value is true.

Exceptions

Exception	Condition
InvalidOperationException	Trying to access an unset property.
ObjectDisposedException	The object has been disposed.
ModularInstrumentsException	The underlying driver returned an error.

ScopeTimingFractionalResample Property

Gets the [ScopeFractionalResample](#) sub-object that you use to configure fractional resampling on the high speed digitizer.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeFractionalResample FractionalResample { get; }
```

```
Public ReadOnly Property FractionalResample As ScopeFractionalResample
    Get
```

Property Value

Type: [ScopeFractionalResample](#)

An object of type [ScopeFractionalResample](#).

See Also

Reference

[ScopeTiming Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeTimingMoreRecordsThanMemoryAllowed Property

Gets or sets whether more records can be configured with [NumberOfRecordsToAcquire](#) than fit in the onboard memory.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public bool MoreRecordsThanMemoryAllowed { get; set; }
```

```
Public Property MoreRecordsThanMemoryAllowed As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

The default value is instrument-specific.

Remarks

If this property is set to , it is necessary to fetch records while the acquisition is in progress. Eventually, some of the records will be overwritten. The fetch method throws an exception if you attempt to fetch a record after it has been overwritten.

ScopeTimingNumberOfRecordsToAcquire Property

Gets or sets the number of records to acquire. Can be used for multirecord acquisitions and single record acquisitions. Setting this property to 1 indicates a single record acquisition.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long NumberOfRecordsToAcquire { get; set; }
```

```
Public Property NumberOfRecordsToAcquire As Long  
    Get  
    Set
```

Property Value

Type: [Int64](#)

Number of records to acquire.

Gets the total combined amount of onboard memory for all channels in bytes.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long OnboardMemorySize { get; }
```

```
Public ReadOnly Property OnboardMemorySize As Long  
    Get
```

Property Value

Type: [Int64](#)

Total combined amount of onboard memory for all channels in bytes.

ScopeTimingOscillatorPhaseDac Property

Gets or sets the binary phase DAC value that controls the delay added to the Phase Locked Loop (PLL) of the sample clock.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public int OscillatorPhaseDac { get; set; }
```

```
Public Property OscillatorPhaseDac As Integer  
    Get  
    Set
```

Property Value

Type: [Int32](#)

Binary phase DAC value that controls the delay added to the PLL of the sample clock.

Remarks

If you set this value, sample clock adjust and TClk cannot do any sub-sample adjustment of the timebase sample clock.

See Also

ScopeTimingPllLockStatus Property

Gets whether the PLL has remained locked/unlocked to the external reference clock since it was last checked.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool PllLockStatus { get; }
```

```
Public ReadOnly Property PllLockStatus As Boolean  
    Get
```

Property Value

Type: [Boolean](#)

true if the PLL has remained locked to the external reference clock since it was last checked and false, the PLL has become unlocked from the external reference clock since it was last checked.

Gets or sets the poll interval to use during RIS acquisitions to check whether the acquisition is complete.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan PollInterval { get; set; }
```

```
Public Property PollInterval As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

Poll interval, in PrecisionTimeSpan.

ScopeTimingReferenceClockRate Property

Gets or sets the frequency, in hertz, of the input, or reference clock, to which the internal sample clock timbase is synchronized if [ReferenceClockSource](#) is an external source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ReferenceClockRate { get; set; }
```

```
Public Property ReferenceClockRate As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)
Frequency, in hertz

See Also

Reference

[Mapping the NI-SCOPE .NET API to the NI-SCOPE C API](#)

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeTimingReferenceClockSource Property

Gets or sets the input source for the PLL reference clock to which the digitizer will be phase-locked.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeInputClockSource ReferenceClockSource { get; set; }
```

```
Public Property ReferenceClockSource As ScopeInputClockSource  
    Get  
    Set
```

Property Value

Type: [ScopeInputClockSource](#)

An object of type [ScopeInputClockSource](#).

Remarks

The input source for the PLL reference clock is 1 MHz to 20 MHz clock on SMC-based digitizers

See Also

Reference

[ScopeTiming Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

Other Resources

[Mapping the NI-SCOPE .NET API to the NI-SCOPE C API](#)

ScopeTimingRisAverages Property

Gets or sets the number of averages for each bin in an RIS acquisition.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long RisAverages { get; set; }
```

```
Public Property RisAverages As Long  
    Get  
    Set
```

Property Value

Type: [Int64](#)

The default value is instrument-specific.

Remarks

The number of averages times the oversampling factor is the minimum number of real-time acquisitions necessary to reconstruct the RIS waveform. Averaging is useful in RIS because the trigger times are not evenly spaced, so adjacent points in the reconstructed waveform cannot be accurately spaced. With averaging, the errors in both time and voltage are smoothed.

ScopeTimingSampleClockTimebaseMultiplier Property

If [SampleClockTimebaseSource](#) is an external source, this attribute specifies the ratio between the [SampleClockTimebaseRate](#) and the [SampleRate](#), which can be higher. This property can be used in conjunction with the [SampleClockTimebaseDivisor](#) attribute. Some instruments use multiple ADCs to sample the same channel at an effective sample rate that is greater than the specified clock rate. When providing an external sample clock use this property to indicate when you want a higher sample rate. Valid values for this attribute vary by instrument and current configuration.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long SampleClockTimebaseMultiplier { get; set; }
```

```
Public Property SampleClockTimebaseMultiplier As Long
    Get
    Set
```

Property Value

Type: [Int64](#)

If [SampleClockTimebaseSource](#) is an external source, this attribute specifies the ratio between the [SampleClockTimebaseRate](#) and the actual sample rate, which can be higher.

ScopeTimingSampleClockTimebaseSource Property

Gets or sets the source of the sample clock timebase, which is the timebase used to control waveform sampling. The [SampleRate](#) may be the timebase itself or a divided version of the timebase, depending on the [SampleRateMin](#) (for internal sources) or the [SampleClockTimebaseDivisor](#) and [SampleClockTimebaseMultiplier](#) (for external sources).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeSampleClockTimebaseSource SampleClockTimebaseSource { get; set; }
```

```
Public Property SampleClockTimebaseSource As ScopeSampleClockTimebaseSource  
    Get  
    Set
```

Property Value

Type: [ScopeSampleClockTimebaseSource](#)

An object of the type [ScopeSampleClockTimebaseSource](#).

See Also

ScopeTiming Properties

The [ScopeTiming](#) type exposes the following members.

Properties

Name	Description
 AbsoluteSampleClockOffset	Gets or sets the absolute time offset of the sample clock relative to the reference clock.
 ClockSynchronizationPulseSource	Gets or sets the clock synchronization pulse source.
 EnforceRealtime	Gets or sets whether the digitizer enforces real-time measurements or allows equivalent-time measurements.
 FractionalResample	Gets the ScopeFractionalResample sub-object that you use to configure fractional resampling on the high speed digitizer.
 MoreRecordsThanMemoryAllowed	Gets or sets whether more records can be configured with NumberOfRecordsToAcquire than fit in the onboard memory.
 NumberOfRecordsToAcquire	Gets or sets the number of records to acquire. Can be used for multirecord acquisitions and single record acquisitions. Setting this property to 1 indicates a single record acquisition.

 OnboardMemorySize	Gets the total combined amount of onboard memory for all channels in bytes.
 OscillatorPhaseDac	Gets or sets the binary phase DAC value that controls the delay added to the Phase Locked Loop (PLL) of the sample clock.
 PllLockStatus	Gets whether the PLL has remained locked/unlocked to the external reference clock since it was last checked.
 PollInterval	Gets or sets the poll interval to use during RIS acquisitions to check whether the acquisition is complete.
 RealtimeSampleRateMax	Gets the maximum real-time sample rate, in Hz.
 ReferenceClockRate	Gets or sets the frequency, in hertz, of the input, or reference clock, to which the internal sample clock timbase is synchronized if ReferenceClockSource is an external source.
 ReferenceClockSource	Gets or sets the input source for the PLL reference clock to which the digitizer will be phase-locked.
 RisAverages	Gets or sets the number of averages for each bin in an RIS acquisition.
 RisMethod	Gets or sets the algorithm for random-interleaved sampling, which is used if the sample rate exceeds the value of RealtimeSampleRateMax .
 RisRateMax	Gets the maximum sample rate in RIS mode, in Hz.
 SampleClockTimebaseDivisor	Gets or sets the ratio between the SampleClockTimebaseRate and the SampleRate (which can be slower) if SampleClockTimebaseSource is an external source.
 SampleClockTimebaseMultiplier	If SampleClockTimebaseSource is an external source, this attribute specifies the ratio between the SampleClockTimebaseRate and the SampleRate , which can be higher. This property can be used in conjunction with the SampleClockTimebaseDivisor attribute. Some instruments use multiple ADCs to sample the same channel at an effective sample rate that is greater than the specified clock rate. When providing an external sample clock use this property to indicate when you want a higher sample rate. Valid values for this attribute vary by instrument and current configuration.
 SampleClockTimebaseRate	Gets or sets the frequency, in hertz, of the external clock used as the timebase source if

		SampleClockTimebaseSource is an external source or, if the timebase source is the internal clock for oscilloscopes that support multiple onboard clock rates, of the internal clock.
	SampleClockTimebaseSource	Gets or sets the source of the sample clock timebase, which is the timebase used to control waveform sampling. The SampleRate may be the timebase itself or a divided version of the timebase, depending on the SampleRateMin (for internal sources) or the SampleClockTimebaseDivisor and SampleClockTimebaseMultiplier (for external sources).

ScopeTimingAbsoluteSampleClockOffset Property

Gets or sets the absolute time offset of the sample clock relative to the reference clock.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public PrecisionTimeSpan AbsoluteSampleClockOffset { get; set; }
```

```
Public Property AbsoluteSampleClockOffset As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The absolute time offset of the sample clock relative to the reference clock.

Exceptions

Exception	Condition
ObjectDisposedException	AbsoluteSampleClockOffset was accessed after associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Configures the sample clock relationship with respect to the reference clock. This parameter is factored into NI-TClk adjustments and is typically used to improve the repeatability of NI-TClk Synchronization. When this parameter is read, the currently programmed value is returned. The range of the absolute sample clock offset is [-0.5 sample clock periods, 0.5 sample clock periods]. The default absolute sample clock offset is 0 s.

ScopeTimingAbsoluteSampleClockOffset Property

Gets or sets the absolute time offset of the sample clock relative to the reference clock.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan AbsoluteSampleClockOffset { get; set; }
```

```
Public Property AbsoluteSampleClockOffset As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The absolute time offset of the sample clock relative to the reference clock.

Exceptions

Exception	Condition
ObjectDisposedException	AbsoluteSampleClockOffset was accessed after associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

Configures the sample clock relationship with respect to the reference clock. This parameter is factored into NI-TClk adjustments and is typically used to improve the repeatability of NI-TClk Synchronization. When this parameter is read, the currently programmed value is returned. The range of the absolute sample clock offset is [-0.5 sample clock periods, 0.5 sample clock periods]. The default absolute sample clock offset is 0 s.

ScopeTimingClockSynchronizationPulseSource Property

Gets or sets the clock synchronization pulse source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeClockSynchronizationPulseSource ClockSynchronizationPulseSource
{ get; set; }
```

```
Public Property ClockSynchronizationPulseSource As
ScopeClockSynchronizationPulseSource
    Get
    Set
```

Property Value

Type: [ScopeClockSynchronizationPulseSource](#)

The clock synchronization pulse source.

Exceptions

Exception	Condition
-----------	-----------

ObjectDisposedException	ClockSynchronizationPulseSource was accessed after associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The underlying NI-SCOPE driver returned an error.

Remarks

This line should be the same for all instruments to be synchronized.

ScopeTimingEnforceRealtime Property

Gets or sets whether the digitizer enforces real-time measurements or allows equivalent-time measurements.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public bool EnforceRealtime { get; set; }
```

```
Public Property EnforceRealtime As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

The default value is true.

Exceptions

Exception	Condition
InvalidOperationException	Trying to access an unset property.
ObjectDisposedException	The object has been disposed.
ModularInstrumentsException	The underlying driver returned an error.

ScopeTimingFractionalResample Property

Gets the [ScopeFractionalResample](#) sub-object that you use to configure fractional resampling on the high speed digitizer.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeFractionalResample FractionalResample { get; }
```

```
Public ReadOnly Property FractionalResample As ScopeFractionalResample
    Get
```

Property Value

Type: [ScopeFractionalResample](#)

An object of type [ScopeFractionalResample](#).

See Also

Reference

[ScopeTiming Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeTimingMoreRecordsThanMemoryAllowed Property

Gets or sets whether more records can be configured with [NumberOfRecordsToAcquire](#) than fit in the onboard memory.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool MoreRecordsThanMemoryAllowed { get; set; }
```

```
Public Property MoreRecordsThanMemoryAllowed As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

The default value is instrument-specific.

Remarks

If this property is set to `True`, it is necessary to fetch records while the acquisition is in progress. Eventually, some of the records will be overwritten. The fetch method throws an exception if you attempt to fetch a record after it has been overwritten.

ScopeTimingNumberOfRecordsToAcquire Property

Gets or sets the number of records to acquire. Can be used for multirecord acquisitions and single record acquisitions. Setting this property to 1 indicates a single record acquisition.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long NumberOfRecordsToAcquire { get; set; }
```

```
Public Property NumberOfRecordsToAcquire As Long  
    Get  
    Set
```

Property Value

Type: [Int64](#)

Number of records to acquire.

ScopeTimingOnboardMemorySize Property

Gets the total combined amount of onboard memory for all channels in bytes.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long OnboardMemorySize { get; }
```

```
Public ReadOnly Property OnboardMemorySize As Long  
    Get
```

Property Value

Type: [Int64](#)

Total combined amount of onboard memory for all channels in bytes.

ScopeTimingOscillatorPhaseDac Property

Gets or sets the binary phase DAC value that controls the delay added to the Phase Locked Loop (PLL) of the sample clock.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public int OscillatorPhaseDac { get; set; }
```

```
Public Property OscillatorPhaseDac As Integer  
    Get  
    Set
```

Property Value

Type: [Int32](#)

Binary phase DAC value that controls the delay added to the PLL of the sample clock.

Remarks

If you set this value, sample clock adjust and TClk cannot do any sub-sample adjustment of the timebase sample clock.

ScopeTimingPllLockStatus Property

Gets whether the PLL has remained locked/unlocked to the external reference clock since it was last checked.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool PllLockStatus { get; }
```

```
Public ReadOnly Property PllLockStatus As Boolean  
    Get
```

Property Value

Type: [Boolean](#)

true if the PLL has remained locked to the external reference clock since it was last checked and false, the PLL has become unlocked from the external reference clock since it was last checked.

ScopeTimingPollInterval Property

Gets or sets the poll interval to use during RIS acquisitions to check whether the acquisition is complete.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan PollInterval { get; set; }
```

```
Public Property PollInterval As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

Poll interval, in PrecisionTimeSpan.

ScopeTimingReferenceClockRate Property

Gets or sets the frequency, in hertz, of the input, or reference clock, to which the internal sample clock timbase is synchronized if [ReferenceClockSource](#) is an external source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ReferenceClockRate { get; set; }
```

```
Public Property ReferenceClockRate As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

Frequency, in hertz

See Also

ScopeTimingReferenceClockSource Property

Gets or sets the input source for the PLL reference clock to which the digitizer will be phase-locked.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeInputClockSource ReferenceClockSource { get; set; }
```

```
Public Property ReferenceClockSource As ScopeInputClockSource
    Get
    Set
```

Property Value

Type: [ScopeInputClockSource](#)

An object of type [ScopeInputClockSource](#).

Remarks

The input source for the PLL reference clock is 1 MHz to 20 MHz clock on SMC-based digitizers

See Also

Reference

[ScopeTiming Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

Other Resources

ScopeTimingRisAverages Property

Gets or sets the number of averages for each bin in an RIS acquisition.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public long RisAverages { get; set; }
```

```
Public Property RisAverages As Long
    Get
    Set
```

Property Value

Type: [Int64](#)

The default value is instrument-specific.

Remarks

The number of averages times the oversampling factor is the minimum number of real-time acquisitions necessary to reconstruct the RIS waveform. Averaging is useful in RIS because the trigger times are not evenly spaced, so adjacent points in the reconstructed waveform cannot be accurately spaced. With averaging, the errors in both time and voltage are smoothed.

ScopeTimingSampleClockTimebaseDivisor Property

Gets or sets the ratio between the [SampleClockTimebaseRate](#) and the [SampleRate](#) (which can be slower) if [SampleClockTimebaseSource](#) is an external source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long SampleClockTimebaseDivisor { get; set; }
```

```
Public Property SampleClockTimebaseDivisor As Long
    Get
    Set
```

Property Value

Type: [Int64](#)

Ratio between sample clock timebase rate and the sample rate.

ScopeTimingSampleClockTimebaseMultiplier Property

If [SampleClockTimebaseSource](#) is an external source, this attribute specifies the ratio between the [SampleClockTimebaseRate](#) and the [SampleRate](#), which can be higher. This property can be used in conjunction with the [SampleClockTimebaseDivisor](#) attribute. Some instruments use multiple ADCs to sample the same channel at an effective sample rate that is greater than the specified clock rate. When providing an external sample clock use this property to indicate when you want a higher sample rate. Valid values for this attribute vary by instrument and current configuration.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public long SampleClockTimebaseMultiplier { get; set; }
```

```
Public Property SampleClockTimebaseMultiplier As Long
    Get
    Set
```

Property Value

Type: [Int64](#)

If [SampleClockTimebaseSource](#) is an external source, this attribute specifies the ratio between the [SampleClockTimebaseRate](#) and the actual sample rate, which can be higher.

ScopeTiming Methods

The [ScopeTiming](#) type exposes the following members.

Methods

Name	Description
 AdjustSampleClockRelativeDelay	Configures the relative sample clock delay in seconds when using the internal clock. Each time this method is called, the sample clock is delayed by the specified amount of time.
 ConfigureClock	Configures the properties for synchronizing the digitizer to a reference or sending the digitizer's reference clock output to be used as a synchronizing clock for other digitizers.
 ConfigureTiming	Configures the common properties of the horizontal subsystem for a multirecord acquisition in terms of minimum sample rate.

 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeTimingAdjustSampleClockRelativeDelay Method

Configures the relative sample clock delay in seconds when using the internal clock. Each time this method is called, the sample clock is delayed by the specified amount of time.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public void AdjustSampleClockRelativeDelay(
    PrecisionTimeSpan delay
)
```

```
Public Sub AdjustSampleClockRelativeDelay (  
    delay As PrecisionTimeSpan  
)
```

Parameters

delay

Type: `NationalInstrumentsPrecisionTimeSpan`

The amount of time, in seconds, to delay the sample clock. This is a relative value, so repeated calls to this method delays the sample clock by this amount every time.

See Also

Reference

ScopeTimingAdjustSampleClockRelativeDelay Method

Configures the relative sample clock delay in seconds when using the internal clock. Each time this method is called, the sample clock is delayed by the specified amount of time.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax

[C#VB](#)

```
public void AdjustSampleClockRelativeDelay(
    PrecisionTimeSpan delay
)
```

```
Public Sub AdjustSampleClockRelativeDelay (
    delay As PrecisionTimeSpan
)
```

Parameters

delay

Type: `NationalInstrumentsPrecisionTimeSpan`

The amount of time, in seconds, to delay the sample clock. This is a relative value, so repeated calls to this method delays the sample clock by this amount every time.

ScopeTimingConfigureClock Method

Configures the properties for synchronizing the digitizer to a reference or sending the digitizer's reference clock output to be used as a synchronizing clock for other digitizers.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax

C#VB

```
public void ConfigureClock(
    ScopeInputClockSource inputClockSource,
    ScopeOutputClockSource outputClockSource,
    ScopeClockSynchronizationPulseSource clockSynchronizationPulseSource,
    bool masterEnabled
)
```

```
Public Sub ConfigureClock (
    inputClockSource As ScopeInputClockSource,
    outputClockSource As ScopeOutputClockSource,
    clockSynchronizationPulseSource As ScopeClockSynchronizationPulseSource,
    masterEnabled As Boolean
)
```

Parameters

inputClockSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeInputClockSource](#)
The input source for the reference clock to which the 100 MHz sample clock is phase-locked.

outputClockSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeOutputClockSource](#)
The output source for the reference clock to which another scope's sample clock can be phased-locked.

clockSynchronizationPulseSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeClockSynchronizationPulseSource](#)
This line should be the same for all instruments to be synchronized.

masterEnabled

Type: [SystemBoolean](#)
Specifies whether you want the instrument to be a master or a slave. The master instrument is typically the originator of the trigger signal and clock sync pulse. For a standalone instrument, set this property to VI_FALSE.

Remarks

Some features are not supported by all digitizers. Refer to [Features Supported by Device](#) for more information.

Reference

[ScopeTiming Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

Copyright © National Instruments Corporation. All Rights Reserved.

ScopeTimingConfigureTiming Method

Configures the common properties of the horizontal subsystem for a multirecord acquisition in terms of minimum sample rate.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ConfigureTiming(  
    double sampleRateMin,  
    int numberOfPointsMin,  
    double referencePosition,  
    int numberOfRecords,  
    bool enforceRealtime  
)
```

```
Public Sub ConfigureTiming (  
    sampleRateMin As Double,  
    numberOfPointsMin As Integer,  
    referencePosition As Double,  
    numberOfRecords As Integer,
```

```

        enforceRealtime As Boolean
    )

```

Parameters

sampleRateMin

Type: [SystemDouble](#)

The sampling rate for the acquisition.

numberOfPointsMin

Type: [SystemInt32](#)

The minimum number of points you need in the record for each channel

referencePosition

Type: [SystemDouble](#)

The position of the reference event in the waveform record specified as a percentage.

numberOfRecords

Type: [SystemInt32](#)

The number of records to acquire.

enforceRealtime

Type: [SystemBoolean](#)

Indicates whether the digitizer enforces real-time measurements or allows equivalent-time (RIS) measurements. Not all digitizers support RIS. Refer to [Features Supported by Device](#) for more information.

ScopeTrigger Class

Represents the [ScopeMeasurement](#) sub-object that contains the properties and methods related to triggering in NI-SCOPE.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject

NationalInstruments.ModularInstruments.NIScopeScopeTrigger

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeTrigger : ScopeSubObject,
    IIVI_ScopeTrigger
```

```
Public NotInheritable Class ScopeTrigger
    Inherits ScopeSubObject
    Implements IIVI_ScopeTrigger
```

The ScopeTrigger type exposes the following members.

Properties

Name	Description
 AdvanceTrigger	Gets the ScopeAdvanceTrigger sub-object.
 ArmReferenceTrigger	Gets the ScopeArmReferenceTrigger sub-object.
 Coupling	Gets or sets how the digitizer couples the trigger source.
 EdgeTrigger	Gets the ScopeEdgeTrigger sub-object.
 EndOfRecordToAdvanceTriggerHoldoff	Gets or sets the adjustable period of time between records that allows for fetching data from the digitizer during a multi-record acquisition.
 ExternalTriggerSourceImpedance	Gets or sets the input impedance, in Ohms, for the external analog trigger channel.
 GlitchTrigger	Gets the ScopeGlitchTrigger sub-object.

 Holdoff	Gets or sets the length of time, in seconds, the digitizer waits after detecting a trigger before enabling the trigger subsystem to detect another trigger.
 IsAutoTriggered	Gets whether the acquisition was auto triggered.
 Level	Gets or sets the voltage threshold, in volts, for the trigger subsystem.
 Modifier	Configures an instrument to automatically complete an acquisition if a trigger has not been received.
 ReferenceTrigger	Gets the ScopeReferenceTrigger sub-object.
 RuntTrigger	Gets the ScopeRuntTrigger sub-object.
 Source	Gets or sets the source the digitizer monitors for the trigger event. Trigger sources vary for each digitizer model.
 StartToReferenceTriggerHoldoff	Gets or sets the length of time, in seconds, you want the digitizer to wait after it starts acquiring data until the digitizer enables the trigger system to detect a Reference Stop trigger.
 StartTrigger	Gets the ScopeStartTrigger sub-object.
 TdcEnabled	Gets or sets whether the digitizer should record the trigger position precisely using time-digital conversion (TDC).
 TV	Gets the ScopeTVTrigger sub-object.
 Type	Get or sets the type of the trigger in use.
 WidthTrigger	Gets the ScopeWidthTrigger sub-object.

[Top](#)

Methods

Name	Description
 ConfigureTriggerDigital	Configures the common properties of a digital trigger.
 ConfigureTriggerHysteresis	Configures common properties for analog hysteresis triggering.
 ConfigureTriggerImmediate	Configures common properties for immediate triggering. Immediate triggering means the digitizer triggers itself.
 ConfigureTriggerSoftware	Configures common properties for software triggering.
 ConfigureTriggerWindow	Configures common properties for analog window triggering.

 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the [Triggering functions and attributes topics in the NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeTrigger Properties

The [ScopeTrigger](#) type exposes the following members.

Properties

Name	Description
 AdvanceTrigger	Gets the ScopeAdvanceTrigger sub-object.
 ArmReferenceTrigger	Gets the ScopeArmReferenceTrigger sub-object.
 Coupling	Gets or sets how the digitizer couples the trigger source.
 EdgeTrigger	Gets the ScopeEdgeTrigger sub-object.
 EndOfRecordToAdvanceTriggerHoldoff	Gets or sets the adjustable period of time between records that allows for fetching data from the digitizer during a multi-record acquisition.
 ExternalTriggerSourceImpedance	Gets or sets the input impedance, in Ohms, for the external analog trigger channel.
 GlitchTrigger	Gets the ScopeGlitchTrigger sub-object.
 Holdoff	Gets or sets the length of time, in seconds, the digitizer waits after detecting a trigger before enabling the trigger subsystem to detect another trigger.
 IsAutoTriggered	Gets whether the acquisition was auto triggered.
 Level	Gets or sets the voltage threshold, in volts, for the trigger subsystem.
 Modifier	Configures an instrument to automatically complete an acquisition if a trigger has not been received.
 ReferenceTrigger	Gets the ScopeReferenceTrigger sub-object.
 RuntTrigger	Gets the ScopeRuntTrigger sub-object.
 Source	Gets or sets the source the digitizer monitors for the trigger event. Trigger sources vary for each digitizer model.
 StartToReferenceTriggerHoldoff	Gets or sets the length of time, in seconds, you want the digitizer to wait after it starts acquiring data until the digitizer enables the trigger system to detect a Reference Stop trigger.
 StartTrigger	Gets the ScopeStartTrigger sub-object.
 TdcEnabled	Gets or sets whether the digitizer should record the trigger position precisely using time-digital conversion (TDC).
 TV	Gets the ScopeTVTrigger sub-object.

 Type	Get or sets the type of the trigger in use.
 WidthTrigger	Gets the ScopeWidthTrigger sub-object.

ScopeTriggerCoupling Property

Gets or sets how the digitizer couples the trigger source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeTriggerCoupling Coupling { get; set; }
```

```
Public Property Coupling As ScopeTriggerCoupling
    Get
    Set
```

Property Value

Type: [ScopeTriggerCoupling](#)
Specifies the [ScopeTriggerCoupling](#).

Remarks

This property affects instrument operation only when [ScopeTriggerType](#) is set to [Edge](#), [Hysteresis](#), or [Window](#).

ScopeTriggerEndOfRecordToAdvanceTriggerHoldoff

Gets or sets the adjustable period of time between records that allows for fetching data from the digitizer during a multi-record acquisition.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan EndOfRecordToAdvanceTriggerHoldoff { get; set; }
```

```
Public Property EndOfRecordToAdvanceTriggerHoldoff As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

The adjustable period of time between records that allows for fetching data from the digitizer during a multi-record acquisition.

Exceptions

Exception	Condition
ObjectDisposedException	EndOfRecordToAdvanceTriggerHoldoff was accessed after associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned error.

Remarks

This attribute disables sampling and triggering.

ScopeTriggerExternalTriggerSourceImpedance Property

Gets or sets the input impedance, in Ohms, for the external analog trigger channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ExternalTriggerSourceImpedance { get; set; }
```

```
Public Property ExternalTriggerSourceImpedance As Double
    Get
    Set
```

Property Value

Type: [Double](#)

Valid values are 50 Ohms and 1 MOhm.

ScopeTriggerGlitchTrigger Property

Gets the [ScopeGlitchTrigger](#) sub-object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeGlitchTrigger GlitchTrigger { get; }
```

```
Public ReadOnly Property GlitchTrigger As ScopeGlitchTrigger
    Get
```

Property Value

Type: [ScopeGlitchTrigger](#)

An object of the type [ScopeGlitchTrigger](#).

Exceptions

Exception	Condition
ObjectDisposedException	GlitchTrigger was called after the associated NIScope or ScopeDriverUtility object was disposed.

See Also

Reference

ScopeTriggerHoldoff Property

Gets or sets the length of time, in seconds, the digitizer waits after detecting a trigger before enabling the trigger subsystem to detect another trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#/VB

```
public PrecisionTimeSpan Holdoff { get; set; }
```

```
Public Property Holdoff As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

Valid values for this property are instrument-dependent, and range from 0.0 seconds to 171.8 seconds.

Remarks

This property affects instrument operation only when the digitizer requires multiple acquisitions to build a complete waveform. The digitizer requires multiple waveform acquisitions when it uses equivalent-time sampling or when the digitizer is configured for a multirecord acquisition through the property [NumberOfRecordsToAcquire](#).

See Also

ScopeTriggerIsAutoTriggered Property

Gets whether the acquisition was auto triggered.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool IsAutoTriggered { get; }
```

```
Public ReadOnly Property IsAutoTriggered As Boolean
    Get
```

Property Value

Type: [Boolean](#)

Auto triggering occurs if the [Modifier](#) is set to [Auto](#), and no trigger has been received for a certain amount of time. , if the acquisition is triggered in this scenario and , if the acquisition is not triggered.

ScopeTriggerLevel Property

Gets or sets the voltage threshold, in volts, for the trigger subsystem.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double Level { get; set; }
```

```
Public Property Level As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The values of the properties [Range](#) and [Offset](#) determine the valid range for the trigger level on the channel used as the Trigger Source. The value passed for the parameter must meet the following conditions:

Trigger Level \leq (Range/2) + Offset

Range \geq (-Range/2) + Offset

Implements

[IIVI_ScopeTriggerLevel](#)

Remarks

This property affects instrument behavior only when the [Type](#) is set to [Edge](#), [Hysteresis](#), or [Window](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeRuntTrigger RuntTrigger { get; }
```

```
Public ReadOnly Property RuntTrigger As ScopeRuntTrigger
    Get
```

Property Value

Type: [ScopeRuntTrigger](#)

An object of the type [ScopeRuntTrigger](#).

Exceptions

Exception	Condition
ObjectDisposedException	RuntTrigger was called after the associated NIScope or ScopeDriverUtility object was disposed.

ScopeTriggerStartToReferenceTriggerHoldoff Property

Gets or sets the length of time, in seconds, you want the digitizer to wait after it starts acquiring data until the digitizer enables the trigger system to detect a Reference Stop trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#/VB

```
public PrecisionTimeSpan StartToReferenceTriggerHoldoff { get; set; }
```

```
Public Property StartToReferenceTriggerHoldoff As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

Valid values for this property are instrument-dependent, and range from 0.0 seconds to 171.8 seconds.

See Also

Gets the [ScopeStartTrigger](#) sub-object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeStartTrigger StartTrigger { get; }
```

```
Public ReadOnly Property StartTrigger As ScopeStartTrigger  
    Get
```

Property Value

Type: [ScopeStartTrigger](#)

An object of the type [ScopeStartTrigger](#).

See Also

Reference

[ScopeTrigger Class](#)

ScopeTriggerTdcEnabled Property

Gets or sets whether the digitizer should record the trigger position precisely using time-digital conversion (TDC).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool TdcEnabled { get; set; }
```

```
Public Property TdcEnabled As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

Gets or sets whether the digitizer should record the trigger position precisely using TDC.

Remarks

Disabling TDC by setting this property to may reduce rearm time but causes the digitizer to round the trigger position to the nearest sample clock.

ScopeTriggerEdgeTrigger Property

Gets the [ScopeEdgeTrigger](#) sub-object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeEdgeTrigger EdgeTrigger { get; }
```

```
Public ReadOnly Property EdgeTrigger As ScopeEdgeTrigger  
    Get
```

Property Value

Type: [ScopeEdgeTrigger](#)

An object of the type [ScopeEdgeTrigger](#).

See Also

Reference

[ScopeTrigger Class](#)

ScopeTriggerEndOfRecordToAdvanceTriggerHoldoff Property

Gets or sets the adjustable period of time between records that allows for fetching data from the digitizer during a multi-record acquisition.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan EndOfRecordToAdvanceTriggerHoldoff { get; set; }
```

```
Public Property EndOfRecordToAdvanceTriggerHoldoff As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The adjustable period of time between records that allows for fetching data from the digitizer during a multi-record acquisition.

Exceptions

Exception	Condition
ObjectDisposedException	EndOfRecordToAdvanceTriggerHoldoff was accessed after associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The underlying NI-SCOPE driver returned error.

Remarks

This attribute disables sampling and triggering.

ScopeTriggerExternalTriggerSourceImpedance Property

Gets or sets the input impedance, in Ohms, for the external analog trigger channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double ExternalTriggerSourceImpedance { get; set; }
```

```
Public Property ExternalTriggerSourceImpedance As Double  
    Get  
    Set
```

Property Value

Type: [Double](#)

Valid values are 50 Ohms and 1 MOhm.

ScopeTriggerGlitchTrigger Property

Gets the [ScopeGlitchTrigger](#) sub-object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeGlitchTrigger GlitchTrigger { get; }
```

```
Public ReadOnly Property GlitchTrigger As ScopeGlitchTrigger  
    Get
```

Property Value

Type: [ScopeGlitchTrigger](#)

An object of the type [ScopeGlitchTrigger](#).

Exceptions

Exception	Condition
ObjectDisposedException	GlitchTrigger was called after the associated NIScope or ScopeDriverUtility object was disposed.

See Also

Reference

ScopeTriggerHoldoff Property

Gets or sets the length of time, in seconds, the digitizer waits after detecting a trigger before enabling the trigger subsystem to detect another trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan Holdoff { get; set; }
```

```
Public Property Holdoff As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

Valid values for this property are instrument-dependent, and range from 0.0 seconds to 171.8 seconds.

Remarks

This property affects instrument operation only when the digitizer requires multiple acquisitions to build a complete waveform. The digitizer requires multiple waveform acquisitions when it uses equivalent-time sampling or when the digitizer

is configured for a multirecord acquisition through the property [NumberOfRecordsToAcquire](#).

ScopeTrigger.IsAutoTriggered Property

Gets whether the acquisition was auto triggered.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool IsAutoTriggered { get; }
```

```
Public ReadOnly Property IsAutoTriggered As Boolean  
    Get
```

Property Value

Type: [Boolean](#)

Auto triggering occurs if the [Modifier](#) is set to [Auto](#), and no trigger has been received for a certain amount of time. , if the acquisition is triggered in this scenario and , if the acquisition is not triggered.

ScopeTriggerLevel Property

Gets or sets the voltage threshold, in volts, for the trigger subsystem.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public double Level { get; set; }
```

```
Public Property Level As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The values of the properties [Range](#) and [Offset](#) determine the valid range for the trigger level on the channel used as the Trigger Source. The value passed for the parameter must meet the following conditions:

Trigger Level \leq (Range/2) + Offset

Range \geq (-Range/2) + Offset

Implements

IlviScopeTriggerLevel

Remarks

This property affects instrument behavior only when the [Type](#) is set to [Edge](#), [Hysteresis](#), or [Window](#).

ScopeTriggerModifier Property

Configures an instrument to automatically complete an acquisition if a trigger has not been received.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeTriggerModifier Modifier { get; set; }
```

```
Public Property Modifier As ScopeTriggerModifier  
    Get  
    Set
```

Property Value

Type: [ScopeTriggerModifier](#)

Specifies the [ScopeTriggerModifier](#).

ScopeTriggerReferenceTrigger Property

Gets the [ScopeReferenceTrigger](#) sub-object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeReferenceTrigger ReferenceTrigger { get; }
```

```
Public ReadOnly Property ReferenceTrigger As ScopeReferenceTrigger  
    Get
```

Property Value

Type: [ScopeReferenceTrigger](#)

An object of the type [ScopeReferenceTrigger](#).

ScopeTriggerRuntTrigger Property

Gets the [ScopeRuntTrigger](#) sub-object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeRuntTrigger RuntTrigger { get; }
```

```
Public ReadOnly Property RuntTrigger As ScopeRuntTrigger
    Get
```

Property Value

Type: [ScopeRuntTrigger](#)

An object of the type [ScopeRuntTrigger](#).

Exceptions

Exception	Condition
ObjectDisposedException	RuntTrigger was called after the associated NIScope or ScopeDriverUtility object was disposed.

ScopeTriggerSource Property

Gets or sets the source the digitizer monitors for the trigger event. Trigger sources vary for each digitizer model.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeTriggerSource Source { get; set; }
```

```
Public Property Source As ScopeTriggerSource  
    Get  
    Set
```

Property Value

Type: [ScopeTriggerSource](#)

An object of the type [ScopeTriggerSource](#).

ScopeTriggerStartToReferenceTriggerHoldoff Property

Gets or sets the length of time, in seconds, you want the digitizer to wait after it starts acquiring data until the digitizer enables the trigger system to detect a Reference Stop trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan StartToReferenceTriggerHoldoff { get; set; }
```

```
Public Property StartToReferenceTriggerHoldoff As PrecisionTimeSpan  
    Get  
    Set
```

Property Value

Type: PrecisionTimeSpan

Valid values for this property are instrument-dependent, and range from 0.0 seconds to 171.8 seconds.

ScopeTriggerStartTrigger Property

Gets the [ScopeStartTrigger](#) sub-object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeStartTrigger StartTrigger { get; }
```

```
Public ReadOnly Property StartTrigger As ScopeStartTrigger
    Get
```

Property Value

Type: [ScopeStartTrigger](#)

An object of the type [ScopeStartTrigger](#).

See Also

Reference

[ScopeTrigger Class](#)

[NationalInstruments.ModularInstruments.NIScope Namespace](#)

ScopeTriggerTdcEnabled Property

Gets or sets whether the digitizer should record the trigger position precisely using time-digital conversion (TDC).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool TdcEnabled { get; set; }
```

```
Public Property TdcEnabled As Boolean
    Get
    Set
```

Property Value

Type: [Boolean](#)

Gets or sets whether the digitizer should record the trigger position precisely using TDC.

Remarks

Disabling TDC by setting this property to may reduce rearm time but causes the digitizer to round the trigger position to the nearest sample clock.

ScopeTrigger.WidthTrigger Property

Gets the [ScopeWidthTrigger](#) sub-object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeWidthTrigger WidthTrigger { get; }
```

```
Public ReadOnly Property WidthTrigger As ScopeWidthTrigger  
    Get
```

Property Value

Type: [ScopeWidthTrigger](#)

An object of the type [ScopeWidthTrigger](#).

Exceptions

Exception	Condition
ObjectDisposedException	WidthTrigger was called after the associated NIScope or ScopeDriverUtility object was disposed.

ScopeTrigger Methods

The [ScopeTrigger](#) type exposes the following members.

Methods

Name	Description
ConfigureTriggerDigital	Configures the common properties of a digital trigger.
ConfigureTriggerHysteresis	Configures common properties for analog hysteresis triggering.
ConfigureTriggerImmediate	Configures common properties for immediate triggering. Immediate triggering means the digitizer triggers itself.
ConfigureTriggerSoftware	Configures common properties for software triggering.
ConfigureTriggerWindow	Configures common properties for analog window triggering.
Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
GetHashCode	Serves as the default hash function. (Inherited from Object .)
GetType	Gets the Type of the current instance. (Inherited from Object .)
ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeTriggerConfigureTriggerDigital Method

Configures the common properties of a digital trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void ConfigureTriggerDigital (
    ScopeTriggerSource triggerSource,
    ScopeTriggerSlope triggerSlope,
    PrecisionTimeSpan triggerHoldoff,
    PrecisionTimeSpan triggerDelay
)
```

```
Public Sub ConfigureTriggerDigital (
    triggerSource As ScopeTriggerSource,
    triggerSlope As ScopeTriggerSlope,
    triggerHoldoff As PrecisionTimeSpan,
    triggerDelay As PrecisionTimeSpan
)
```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)

The trigger source.

triggerSlope

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSlope](#)

A value indicating whether you want a rising edge or a falling edge to trigger the digitizer.

triggerHoldoff

Type: `NationalInstrumentsPrecisionTimeSpan`

The length of time, in seconds, that the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

Type: `NationalInstrumentsPrecisionTimeSpan`

The length of time, in seconds, that the digitizer waits after receiving the trigger to start acquiring data.

ScopeTriggerConfigureTriggerDigital Method

Configures the common properties of a digital trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax**C#**

```
public void ConfigureTriggerDigital(
    ScopeTriggerSource triggerSource,
    ScopeTriggerSlope triggerSlope,
    PrecisionTimeSpan triggerHoldoff,
    PrecisionTimeSpan triggerDelay
)
```

```
Public Sub ConfigureTriggerDigital (
    triggerSource As ScopeTriggerSource,
    triggerSlope As ScopeTriggerSlope,
```

```

triggerHoldoff As PrecisionTimeSpan,
triggerDelay As PrecisionTimeSpan
)

```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)

The trigger source.

triggerSlope

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSlope](#)

A value indicating whether you want a rising edge or a falling edge to trigger the digitizer.

triggerHoldoff

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after receiving the trigger to start acquiring data.

ScopeTriggerConfigureTriggerHysteresis Method

Configures common properties for analog hysteresis triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: [NationalInstruments.ModularInstruments.NIScope.Fx45](#) (in [NationalInstruments.ModularInstruments.NIScope.Fx45.dll](#)) Version: 2020

Syntax

C#VB

```
public void ConfigureTriggerHysteresis(
    ScopeTriggerSource triggerSource,
    double triggerLevel,
    double triggerhysteresisSize,
    ScopeTriggerSlope triggerSlope,
    ScopeTriggerCoupling triggerCoupling,
    PrecisionTimeSpan triggerHoldoff,
    PrecisionTimeSpan triggerDelay
)
```

```
Public Sub ConfigureTriggerHysteresis (
    triggerSource As ScopeTriggerSource,
    triggerLevel As Double,
    triggerhysteresisSize As Double,
    triggerSlope As ScopeTriggerSlope,
    triggerCoupling As ScopeTriggerCoupling,
    triggerHoldoff As PrecisionTimeSpan,
    triggerDelay As PrecisionTimeSpan
)
```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)

The trigger source.

triggerLevel

Type: [SystemDouble](#)

The voltage threshold for the trigger.

triggerhysteresisSize

Type: [SystemDouble](#)

The size of the hysteresis window, in volts, on either side of the [Level](#).

triggerSlope

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSlope](#)

A value indicating whether you want a rising edge or a falling edge to trigger the digitizer.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)

A value indicating whether to apply coupling and filtering options to the trigger signal.

triggerHoldoff

Type: [NationalInstruments.PrecisionTimeSpan](#)

The length of time the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

Type: [NationalInstruments.PrecisionTimeSpan](#)

The time duration, in seconds, that the digitizer waits after receiving the trigger to start acquiring data.

ScopeTriggerConfigureTriggerSoftware Method

Configures common properties for software triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public void ConfigureTriggerSoftware(  
    PrecisionTimeSpan triggerHoldoff,  
    PrecisionTimeSpan triggerDelay  
)
```

```
Public Sub ConfigureTriggerSoftware (  
    triggerHoldoff As PrecisionTimeSpan,  
    triggerDelay As PrecisionTimeSpan  
)
```

Parameters

triggerHoldoff

Type: NationalInstrumentsPrecisionTimeSpan

The length of time, in seconds, the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

Type: `NationalInstrumentsPrecisionTimeSpan`

The length of time, in seconds, the digitizer waits after receiving the trigger to start acquiring data.

ScopeTriggerConfigureTriggerWindow Method

Configures common properties for analog window triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: `NationalInstruments.ModularInstruments.NIScope.Fx45` (in `NationalInstruments.ModularInstruments.NIScope.Fx45.dll`) Version: 2020

Syntax

C#VB

```
public void ConfigureTriggerWindow(  
    ScopeTriggerSource triggerSource,  
    double triggerLowLevel,  
    double triggerHighLevel,  
    ScopeWindowTriggerMode triggerWindowMode,  
    ScopeTriggerCoupling triggerCoupling,  
    PrecisionTimeSpan triggerHoldoff,  
    PrecisionTimeSpan triggerDelay  
)
```

```
Public Sub ConfigureTriggerWindow (  
    triggerSource As ScopeTriggerSource,  
    triggerLowLevel As Double,  
    triggerHighLevel As Double,  
    triggerWindowMode As ScopeWindowTriggerMode,
```

```

    triggerCoupling As ScopeTriggerCoupling,
    triggerHoldoff As PrecisionTimeSpan,
    triggerDelay As PrecisionTimeSpan
)

```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)

The trigger source.

triggerLowLevel

Type: [SystemDouble](#)

The voltage threshold the digitizer to uses for low triggering.

triggerHighLevel

Type: [SystemDouble](#)

The voltage threshold the digitizer to uses for high triggering.

triggerWindowMode

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWindowTriggerMode](#)

A value indicating whether the trigger should occur when the signal enters or leaves a window.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)

A value indicating whether to apply coupling and filtering options to the trigger signal.

triggerHoldoff

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after receiving the trigger to start acquiring data.

ScopeTriggerCoupling Enumeration

Specifies how the digitizer couples the trigger source.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeTriggerCoupling
```

```
Public Enumeration ScopeTriggerCoupling
```

Members

Member name	Value	Description
AC	0	The digitizer AC couples the input signal.
DC	1	The digitizer DC couples the input signal.
HighFrequencyReject	3	The digitizer filters the signal to remove high frequencies.
LowFrequencyReject	4	The digitizer filters the signal to remove low frequencies.
ACPlusHighFrequencyReject	1001	The digitizer AC couples the signal to remove high frequencies. The result is a passband.

ScopeTriggerModifier Enumeration

Configures the device to automatically complete an acquisition if a trigger has not been received, after a period of time.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeTriggerModifier
```

```
Public Enumeration ScopeTriggerModifier
```

Members

Member name	Value	Description
None	1	The acquisition is not triggered if the trigger Type is set to any value other than Immediate .
Auto	2	The acquisition is auto-triggered, if no trigger arrives.

ScopeTriggerPolarity Enumeration

Specifies the polarity with which the digitizer will trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeTriggerPolarity
```

```
Public Enumeration ScopeTriggerPolarity
```

Members

Member name	Value	Description
Positive	1	The digitizer will trigger with positive polarity.
Negative	2	The digitizer will trigger with negative polarity.
Either	3	The digitizer will trigger with either polarity.

ScopeTriggerSlope Enumeration

Specifies whether a rising or a falling edge triggers the digitizer.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeTriggerSlope
```

```
Public Enumeration ScopeTriggerSlope
```

Members

Member name	Value	Description
Positive	1	A positive (rising) edge passing through the trigger level triggers the digitizer. For a digital trigger, this corresponds to a low-to-high transition.
Negative	0	A negative (falling) edge passing through the trigger level triggers the digitizer. For a digital trigger, this corresponds to a high-to-low transition.

ScopeTriggerSource Class

Represents the source terminal for [Source](#).

Inheritance Hierarchy

[SystemObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public sealed class ScopeTriggerSource
```

```
Public NotInheritable Class ScopeTriggerSource
```

The ScopeTriggerSource type exposes the following members.

Properties

	Name	Description
	<u>Aux0Pfi0</u>	Gets the source terminal for AUX I/O connector 0 PFI 0.
	<u>Aux0Pfi1</u>	Gets the source terminal for AUX I/O connector 0 PFI 1.
	<u>Aux0Pfi2</u>	Gets the source terminal for AUX I/O connector 0 PFI 2.
	<u>Aux0Pfi3</u>	Gets the source terminal for AUX I/O connector 0 PFI 3.
	<u>Aux0Pfi4</u>	Gets the source terminal for AUX I/O connector 0 PFI 4.
	<u>Aux0Pfi5</u>	Gets the source terminal for AUX I/O connector 0 PFI 5.
	<u>Aux0Pfi6</u>	Gets the source terminal for AUX I/O connector 0 PFI 6.
	<u>Aux0Pfi7</u>	Gets the source terminal for AUX I/O connector 0 PFI 7.
	<u>Channel0</u>	Gets the source terminal for channel 0.
	<u>Channel1</u>	Gets the source terminal for channel 1.
	<u>Channel2</u>	Gets the source terminal for channel 2.
	<u>Channel3</u>	Gets the source terminal for channel 3.
	<u>Channel4</u>	Gets the source terminal for channel 4.
	<u>Channel5</u>	Gets the source terminal for channel 5.
	<u>Channel6</u>	Gets the source terminal for channel 6.
	<u>Channel7</u>	Gets the source terminal for channel 7.
	<u>External</u>	Gets the source terminal for External.
	<u>Immediate</u>	Gets the source terminal for Immediate.
	<u>Pfi0</u>	Gets the source terminal for PFI 0.
	<u>Pfi1</u>	Gets the source terminal for PFI 1.
	<u>Pfi2</u>	Gets the source terminal for PFI 2.
	<u>PxiStar</u>	Gets the source terminal for PXI STAR.
	<u>Rtsi0</u>	Gets the source terminal for RTSI 0.
	<u>Rtsi1</u>	Gets the source terminal for RTSI 1.
	<u>Rtsi2</u>	Gets the source terminal for RTSI 2.
	<u>Rtsi3</u>	Gets the source terminal for RTSI 3.
	<u>Rtsi4</u>	Gets the source terminal for RTSI 4.
	<u>Rtsi5</u>	Gets the source terminal for RTSI 5.
	<u>Rtsi6</u>	Gets the source terminal for RTSI 6.
	<u>Rtsi7</u>	Gets the source terminal for RTSI 7.

 SoftwareTriggerFunction	Gets the source terminal for the software trigger.
---	--

[Top](#)

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeTriggerSource and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeTriggerSource)	Determines whether the current instance of ScopeTriggerSource and the specified ScopeTriggerSource object are equal.
 	FromString	Creates a ScopeTriggerSource object from the specified String .
	GetHashCode	Gets the hash code for the current instance of ScopeTriggerSource. (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of ScopeTriggerSource to String . (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
 	Equality	Checks whether two ScopeTriggerSource object instances are equal.
 	(String to ScopeTriggerSource)	Converts a specified String to an equivalent ScopeTriggerSource object.
 	(ScopeTriggerSource to String)	Converts a ScopeTriggerSource object to an equivalent String .
 	Inequality	Checks whether two ScopeTriggerSource object instances are not equal.

[Top](#)

Remarks

For more information see [Features Supported by Device](#) in the NI High-Speed Digitizers Help.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeTriggerSource Properties

The [ScopeTriggerSource](#) type exposes the following members.

Properties

	Name	Description
	Aux0Pfi0	Gets the source terminal for AUX I/O connector 0 PFI 0.
	Aux0Pfi1	Gets the source terminal for AUX I/O connector 0 PFI 1.
	Aux0Pfi2	Gets the source terminal for AUX I/O connector 0 PFI 2.
	Aux0Pfi3	Gets the source terminal for AUX I/O connector 0 PFI 3.
	Aux0Pfi4	Gets the source terminal for AUX I/O connector 0 PFI 4.
	Aux0Pfi5	Gets the source terminal for AUX I/O connector 0 PFI 5.
	Aux0Pfi6	Gets the source terminal for AUX I/O connector 0 PFI 6.
	Aux0Pfi7	Gets the source terminal for AUX I/O connector 0 PFI 7.
	Channel0	Gets the source terminal for channel 0.
	Channel1	Gets the source terminal for channel 1.

 Channel2	Gets the source terminal for channel 2.
 Channel3	Gets the source terminal for channel 3.
 Channel4	Gets the source terminal for channel 4.
 Channel5	Gets the source terminal for channel 5.
 Channel6	Gets the source terminal for channel 6.
 Channel7	Gets the source terminal for channel 7.
 External	Gets the source terminal for External.
 Immediate	Gets the source terminal for Immediate.
 Pfi0	Gets the source terminal for PFI 0.
 Pfi1	Gets the source terminal for PFI 1.
 Pfi2	Gets the source terminal for PFI 2.
 PxiStar	Gets the source terminal for PXI STAR.
 Rtsi0	Gets the source terminal for RTSI 0.
 Rtsi1	Gets the source terminal for RTSI 1.
 Rtsi2	Gets the source terminal for RTSI 2.
 Rtsi3	Gets the source terminal for RTSI 3.
 Rtsi4	Gets the source terminal for RTSI 4.
 Rtsi5	Gets the source terminal for RTSI 5.
 Rtsi6	Gets the source terminal for RTSI 6.
 Rtsi7	Gets the source terminal for RTSI 7.
 SoftwareTriggerFunction	Gets the source terminal for the software trigger.

ScopeTriggerSourceAux0Pfi0 Property

Gets the source terminal for AUX I/O connector 0 PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Aux0Pfi0 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi0 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_AUX_0_PFI_0".

ScopeTriggerSourceAux0Pfi0 Property

Gets the source terminal for AUX I/O connector 0 PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Aux0Pfi0 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi0 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_AUX_0_PFI_0".

Gets the source terminal for AUX I/O connector 0 PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Aux0Pfi1 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi1 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_AUX_0_PFI_1".

Gets the source terminal for AUX I/O connector 0 PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Aux0Pfi2 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi2 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_AUX_0_PFI_2".

Gets the source terminal for AUX I/O connector 0 PFI 3.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Aux0Pfi3 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi3 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_AUX_0_PFI_3".

ScopeTriggerSourceAux0Pfi4 Property

Gets the source terminal for AUX I/O connector 0 PFI 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Aux0Pfi4 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi4 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_AUX_0_PFI_4".

ScopeTriggerSourceAux0Pfi5 Property

Gets the source terminal for AUX I/O connector 0 PFI 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Aux0Pfi5 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi5 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_AUX_0_PFI_5".

ScopeTriggerSourceAux0Pfi6 Property

Gets the source terminal for AUX I/O connector 0 PFI 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Aux0Pfi6 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi6 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_AUX_0_PFI_6".

ScopeTriggerSourceAux0Pfi7 Property

Gets the source terminal for AUX I/O connector 0 PFI 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Aux0Pfi7 { get; }
```

```
Public Shared ReadOnly Property Aux0Pfi7 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_AUX_0_PFI_7".

ScopeTriggerSourceChannel0 Property

Gets the source terminal for channel 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Channel0 { get; }
```

```
Public Shared ReadOnly Property Channel0 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "0".

ScopeTriggerSourceChannel1 Property

Gets the source terminal for channel 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Channel1 { get; }
```

```
Public Shared ReadOnly Property Channel1 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "1".

ScopeTriggerSourceChannel2 Property

Gets the source terminal for channel 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Channel2 { get; }
```

```
Public Shared ReadOnly Property Channel2 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "2".

ScopeTriggerSourceChannel3 Property

Gets the source terminal for channel 3.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Channel3 { get; }
```

```
Public Shared ReadOnly Property Channel3 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "3".

ScopeTriggerSourceChannel4 Property

Gets the source terminal for channel 4.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Channel4 { get; }
```

```
Public Shared ReadOnly Property Channel4 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "4".

ScopeTriggerSourceChannel5 Property

Gets the source terminal for channel 5.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Channel5 { get; }
```

```
Public Shared ReadOnly Property Channel5 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "5".

ScopeTriggerSourceChannel6 Property

Gets the source terminal for channel 6.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Channel6 { get; }
```

```
Public Shared ReadOnly Property Channel6 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "6".

ScopeTriggerSourceChannel7 Property

Gets the source terminal for channel 7.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Channel7 { get; }
```

```
Public Shared ReadOnly Property Channel7 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "7".

ScopeTriggerSourceExternal Property

Gets the source terminal for External.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource External { get; }
```

```
Public Shared ReadOnly Property External As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_EXTERNAL".

ScopeTriggerSourceImmediate Property

Gets the source terminal for Immediate.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Immediate { get; }
```

```
Public Shared ReadOnly Property Immediate As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_IMMEDIATE".

ScopeTriggerSourcePfi0 Property

Gets the source terminal for PFI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Pfi0 { get; }
```

```
Public Shared ReadOnly Property Pfi0 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_PFI_0".

ScopeTriggerSourcePfi1 Property

Gets the source terminal for PFI 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Pfi1 { get; }
```

```
Public Shared ReadOnly Property Pfi1 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_PFI_1".

ScopeTriggerSourcePfi2 Property

Gets the source terminal for PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_PFI_2".

ScopeTriggerSourcePxiStar Property

Gets the source terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_PXI_STAR".

ScopeTriggerSourceRtsi0 Property

Gets the source terminal for RTSI 0.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Rtsi0 { get; }
```

```
Public Shared ReadOnly Property Rtsi0 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_RTISI_0".

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Rtsi2 { get; }
```

```
Public Shared ReadOnly Property Rtsi2 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_RTSI_2".

ScopeTriggerSourceSoftwareTriggerFunction Property

Gets the source terminal for the software trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource SoftwareTriggerFunction { get; }
```

```
Public Shared ReadOnly Property SoftwareTriggerFunction As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_SW_TRIG_FUNC".

ScopeTriggerSource Properties

The [ScopeTriggerSource](#) type exposes the following members.

Properties

	Name	Description
	<u>Aux0Pfi0</u>	Gets the source terminal for AUX I/O connector 0 PFI 0.
	<u>Aux0Pfi1</u>	Gets the source terminal for AUX I/O connector 0 PFI 1.
	<u>Aux0Pfi2</u>	Gets the source terminal for AUX I/O connector 0 PFI 2.
	<u>Aux0Pfi3</u>	Gets the source terminal for AUX I/O connector 0 PFI 3.
	<u>Aux0Pfi4</u>	Gets the source terminal for AUX I/O connector 0 PFI 4.
	<u>Aux0Pfi5</u>	Gets the source terminal for AUX I/O connector 0 PFI 5.
	<u>Aux0Pfi6</u>	Gets the source terminal for AUX I/O connector 0 PFI 6.
	<u>Aux0Pfi7</u>	Gets the source terminal for AUX I/O connector 0 PFI 7.
	<u>Channel0</u>	Gets the source terminal for channel 0.
	<u>Channel1</u>	Gets the source terminal for channel 1.
	<u>Channel2</u>	Gets the source terminal for channel 2.
	<u>Channel3</u>	Gets the source terminal for channel 3.
	<u>Channel4</u>	Gets the source terminal for channel 4.
	<u>Channel5</u>	Gets the source terminal for channel 5.
	<u>Channel6</u>	Gets the source terminal for channel 6.
	<u>Channel7</u>	Gets the source terminal for channel 7.
	<u>External</u>	Gets the source terminal for External.
	<u>Immediate</u>	Gets the source terminal for Immediate.
	<u>Pfi0</u>	Gets the source terminal for PFI 0.
	<u>Pfi1</u>	Gets the source terminal for PFI 1.
	<u>Pfi2</u>	Gets the source terminal for PFI 2.
	<u>PxiStar</u>	Gets the source terminal for PXI STAR.
	<u>Rtsi0</u>	Gets the source terminal for RTSI 0.
	<u>Rtsi1</u>	Gets the source terminal for RTSI 1.
	<u>Rtsi2</u>	Gets the source terminal for RTSI 2.
	<u>Rtsi3</u>	Gets the source terminal for RTSI 3.
	<u>Rtsi4</u>	Gets the source terminal for RTSI 4.
	<u>Rtsi5</u>	Gets the source terminal for RTSI 5.
	<u>Rtsi6</u>	Gets the source terminal for RTSI 6.
	<u>Rtsi7</u>	Gets the source terminal for RTSI 7.

[SoftwareTriggerFunction](#)

Gets the source terminal for the software trigger.

ScopeTriggerSourceChannel1 Property

Gets the source terminal for channel 1.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Channel1 { get; }
```

```
Public Shared ReadOnly Property Channel1 As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "1".

Gets the source terminal for External.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource External { get; }
```

```
Public Shared ReadOnly Property External As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_EXTERNAL".

ScopeTriggerSourceImmediate Property

Gets the source terminal for Immediate.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Immediate { get; }
```

```
Public Shared ReadOnly Property Immediate As ScopeTriggerSource  
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_IMMEDIATE".

ScopeTriggerSourcePfi2 Property

Gets the source terminal for PFI 2.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource Pfi2 { get; }
```

```
Public Shared ReadOnly Property Pfi2 As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_PFI_2".

ScopeTriggerSourcePxiStar Property

Gets the source terminal for PXI STAR.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource PxiStar { get; }
```

```
Public Shared ReadOnly Property PxiStar As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_PXI_STAR".

ScopeTriggerSourceSoftwareTriggerFunction Property

Gets the source terminal for the software trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource SoftwareTriggerFunction { get; }
```

```
Public Shared ReadOnly Property SoftwareTriggerFunction As ScopeTriggerSource
    Get
```

Property Value

Type: [ScopeTriggerSource](#)

A [ScopeTriggerSource](#) representing the [String](#) "VAL_SW_TRIG_FUNC".

ScopeTriggerSource Methods

The [ScopeTriggerSource](#) type exposes the following members.

Methods

	Name	Description
	Equals(Object)	Determines whether the current instance of ScopeTriggerSource and the specified object are equal. (Overrides ObjectEquals(Object) .)
	Equals(ScopeTriggerSource)	Determines whether the current instance of ScopeTriggerSource and the specified ScopeTriggerSource object are equal.
	 FromString	Creates a ScopeTriggerSource object from the specified String .
	GetHashCode	Gets the hash code for the current instance of ScopeTriggerSource . (Overrides ObjectGetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Converts the current instance of ScopeTriggerSource to String . (Overrides ObjectToString .)

ScopeTriggerSourceEquals Method (Object)

Determines whether the current instance of [ScopeTriggerSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public override bool Equals(
    Object obj
)
```

```
Public Overrides Function Equals (
    obj As Object
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeTriggerSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeTriggerSourceEquals Method (Object)

Determines whether the current instance of [ScopeTriggerSource](#) and the specified object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in

NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

Specifies the object to compare to the current instance of [ScopeTriggerSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeTriggerSourceEquals Method (ScopeTriggerSource)

Determines whether the current instance of [ScopeTriggerSource](#) and the specified [ScopeTriggerSource](#) object are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeTriggerSource source  
)
```

```
Public Function Equals (  
    source As ScopeTriggerSource  
) As Boolean
```

Parameters

source

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
Specifies the [ScopeTriggerSource](#) object to compare to the current instance of [ScopeTriggerSource](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeTriggerSourceFromString Method

Creates a [ScopeTriggerSource](#) object from the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static ScopeTriggerSource FromString(  
    string source  
)
```

```
Public Shared Function FromString (  
    source As String  
) As ScopeTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) that the [ScopeTriggerSource](#) object returned represents.

Return Value

Type: [ScopeTriggerSource](#)

Returns an object of type [ScopeTriggerSource](#) representing the specified source [String](#).

ScopeTriggerSource.GetHashCode Method

Gets the hash code for the current instance of [ScopeTriggerSource](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

Returns an [Int32](#) representing the hash code for the current instance of [ScopeTriggerSource](#).

ScopeTriggerSourceToString Method

Converts the current instance of [ScopeTriggerSource](#) to [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override string ToString()
```

```
Public Overrides Function ToString As String
```

Return Value

Type: [String](#)

Returns a [String](#) representing the current instance of [ScopeTriggerSource](#).

ScopeTriggerSource Operators and Type Conversions

The [ScopeTriggerSource](#) type exposes the following members.

Operators

	Name	Description
	Equality	Checks whether two ScopeTriggerSource object instances are equal.
	(String to ScopeTriggerSource)	Converts a specified String to an equivalent ScopeTriggerSource object.
	(ScopeTriggerSource to String)	Converts a ScopeTriggerSource object to an equivalent String .
	Inequality	Checks whether two ScopeTriggerSource object instances are not equal.

ScopeTriggerSourceEquality Operator

Checks whether two [ScopeTriggerSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeTriggerSource source1,
    ScopeTriggerSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeTriggerSource,
    source2 As ScopeTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
Specifies the first [ScopeTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
Specifies the second [ScopeTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeTriggerSourceEquality Operator

Checks whether two [ScopeTriggerSource](#) object instances are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeTriggerSource source1,
    ScopeTriggerSource source2
)
```

```
Public Shared Operator = (
    source1 As ScopeTriggerSource,
    source2 As ScopeTriggerSource
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
Specifies the first [ScopeTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
Specifies the second [ScopeTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeTriggerSource Conversion (String to ScopeTriggerSource)

Converts a specified [String](#) to an equivalent [ScopeTriggerSource](#) object.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeTriggerSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeTriggerSource](#) object.

Return Value

Type: [ScopeTriggerSource](#)

Returns the [ScopeTriggerSource](#) object representing the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static implicit operator ScopeTriggerSource (  
    string source  
)
```

```
Public Shared Widening Operator CType (  
    source As String  
) As ScopeTriggerSource
```

Parameters

source

Type: [SystemString](#)

Specifies the [String](#) to be converted to an equivalent [ScopeTriggerSource](#) object.

Return Value

Type: [ScopeTriggerSource](#)

Returns the [ScopeTriggerSource](#) object representing the specified [String](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator !=(  
    ScopeTriggerSource source1,  
    ScopeTriggerSource source2  
)
```

```
Public Shared Operator <> (  
    source1 As ScopeTriggerSource,  
    source2 As ScopeTriggerSource  
) As Boolean
```

Parameters

source1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
Specifies the first [ScopeTriggerSource](#) object to compare.

source2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
Specifies the second [ScopeTriggerSource](#) object to compare.

Return Value

Type: [Boolean](#)

if the two instances are not equal; otherwise, .

ScopeTriggerType Enumeration

Specifies the type of trigger to use.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)/[VB](#)

```
public enum ScopeTriggerType
```

```
Public Enumeration ScopeTriggerType
```

Members

Member name	Value	Description
Edge	1	The digitizer is configured for edge triggering.
Width	2	The digitizer is configured for glitch triggering.
Runt	3	The digitizer is configured for width triggering.
Glitch	4	The digitizer is configured for runt triggering.
TV	5	The digitizer is configured for video triggering.
Immediate	6	The digitizer does not wait for a trigger of any kind.
Hysteresis	1001	The digitizer is configured for hysteresis triggering.
DigitalEdge	1002	The digitizer is configured for digital triggering.
Window	1003	The digitizer is configured for window triggering.
Software	1004	The digitizer waits until you call SendSoftwareEdgeTrigger .

ScopeTVTrigger Class

Represents the [ScopeMeasurement](#) sub-object that contains properties and methods related to the video reference trigger.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeTVTrigger

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeTVTrigger : ScopeSubObject,
    IIVI_ScopeTriggerTV
```

```
Public NotInheritable Class ScopeTVTrigger
    Inherits ScopeSubObject
    Implements IIVI_ScopeTriggerTV
```

The ScopeTVTrigger type exposes the following members.

Properties

Name	Description
------	-------------

 DCRestoreEnabled	Gets or sets whether the video-triggered data retrieved by the digitizer should be restored to the video signal's zero reference point.
 LineNumber	Gets or sets the line on which to trigger, if TriggerEvent is set to LineNumber .
 Polarity	Gets or sets whether the video signal sync is positive or negative.
 SignalFormat	Gets or sets the type of video signal.
 TriggerEvent	Gets or sets the condition in the video signal that causes the digitizer to trigger.

[Top](#)

Methods

Name	Description
 Configure	Configures the common properties for video triggering, including the signal format, TV event, line number, polarity, and enable DC restore. A video trigger occurs when the digitizer finds a valid video signal sync. When you initiate an acquisition, the digitizer waits for the start trigger, which is configured through the Source attribute. The default is Immediate . Upon receiving the start trigger the digitizer begins sampling pretrigger points. After the digitizer finishes sampling pretrigger points, the digitizer waits for a reference (stop) trigger that you specify with a method such as this one. Upon receiving the reference trigger the digitizer finishes the acquisition after completing posttrigger sampling. With each Configure Trigger method, you specify configuration parameters such as the trigger source and the amount of trigger delay.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Trigger Video/TV attributes topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeTVTriggerDCRestoreEnabled Property

Gets or sets whether the video-triggered data retrieved by the digitizer should be restored to the video signal's zero reference point.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool DCRestoreEnabled { get; set; }
```

```
Public Property DCRestoreEnabled As Boolean  
    Get  
    Set
```

Property Value

Type: [Boolean](#)

if DC restore is enabled and if DC restore is disabled.

See Also

ScopeTVTriggerTriggerEvent Property

Gets or sets the condition in the video signal that causes the digitizer to trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeTVTriggerEvent TriggerEvent { get; set; }
```

```
Public Property TriggerEvent As ScopeTVTriggerEvent
    Get
    Set
```

Property Value

Type: [ScopeTVTriggerEvent](#)

Specifies the [ScopeTVTriggerEvent](#).

ScopeTVTrigger Methods

The [ScopeTVTrigger](#) type exposes the following members.

Methods

Name	Description
------	-------------

 Configure	Configures the common properties for video triggering, including the signal format, TV event, line number, polarity, and enable DC restore. A video trigger occurs when the digitizer finds a valid video signal sync. When you initiate an acquisition, the digitizer waits for the start trigger, which is configured through the Source attribute. The default is Immediate . Upon receiving the start trigger the digitizer begins sampling pretrigger points. After the digitizer finishes sampling pretrigger points, the digitizer waits for a reference (stop) trigger that you specify with a method such as this one. Upon receiving the reference trigger the digitizer finishes the acquisition after completing posttrigger sampling. With each Configure Trigger method, you specify configuration parameters such as the trigger source and the amount of trigger delay.
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

ScopeTVTriggerConfigure Method

Configures the common properties for video triggering, including the signal format, TV event, line number, polarity, and enable DC restore. A video trigger occurs when the digitizer finds a valid video signal sync. When you initiate an acquisition, the digitizer waits for the start trigger, which is configured through the [Source](#) attribute. The default is [Immediate](#). Upon receiving the start trigger the digitizer begins sampling pretrigger points. After the digitizer finishes sampling pretrigger points,

the digitizer waits for a reference (stop) trigger that you specify with a method such as this one. Upon receiving the reference trigger the digitizer finishes the acquisition after completing posttrigger sampling. With each Configure Trigger method, you specify configuration parameters such as the trigger source and the amount of trigger delay.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void Configure(
    ScopeTriggerSource triggerSource,
    bool triggerDCRestoreEnable,
    ScopeTVTriggerSignalFormat triggerSignalFormat,
    ScopeTVTriggerEvent triggerEvent,
    long triggerLineNumber,
    ScopeTVTriggerPolarity triggerPolarity,
    ScopeTriggerCoupling triggerCoupling,
    PrecisionTimeSpan triggerHoldoff,
    PrecisionTimeSpan triggerDelay
)
```

```
Public Sub Configure (
    triggerSource As ScopeTriggerSource,
    triggerDCRestoreEnable As Boolean,
    triggerSignalFormat As ScopeTVTriggerSignalFormat,
    triggerEvent As ScopeTVTriggerEvent,
    triggerLineNumber As Long,
    triggerPolarity As ScopeTVTriggerPolarity,
    triggerCoupling As ScopeTriggerCoupling,
    triggerHoldoff As PrecisionTimeSpan,
    triggerDelay As PrecisionTimeSpan
)
```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)

The trigger source. Refer to [ScopeTriggerSource](#) for defined values.

triggerDCRestoreEnable

Type: [SystemBoolean](#)

Offsets each video line so the clamping level (the portion of the video line between the end of the color burst and the beginning of the active image) is moved to zero volt. Refer to [DCRestoreEnabled](#) for defined values.

triggerSignalFormat

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTVTriggerSignalFormat](#)

The type of video signal sync the digitizer should look for. Refer to [SignalFormat](#) for more information.

triggerEvent

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTVTriggerEvent](#)

The TV event you want to trigger on. You can trigger on a specific or on the next coming line or field of the signal.

triggerLineNumber

Type: [SystemInt64](#)

The line number to trigger on. The line number range covers an entire frame and is referenced as shown on Vertical Blanking and Synchronization Signal. Refer to [LineNumber](#) for more information. Default value is 1

triggerPolarity

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTVTriggerPolarity](#)

The polarity of the video signal sync.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)

Applies coupling and filtering options to the trigger signal. Refer to [Coupling](#) for more information.

triggerHoldoff

Type: [NationalInstrumentsPrecisionTimeSpan](#)

The length of time the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger. Refer to [Holdoff](#) for more information.

triggerDelay

Type: `NationalInstrumentsPrecisionTimeSpan`

The amount of time the digitizer waits after receiving the trigger to start acquiring data. Refer to [Delay](#) for more information.

ScopeTVTriggerEvent Enumeration

Specifies the condition in the video signal that causes the digitizer to trigger.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: [NationalInstruments.ModularInstruments.NIScope.Fx45](#) (in

[NationalInstruments.ModularInstruments.NIScope.Fx45.dll](#)) Version: 2020

Syntax

C#VB

```
public enum ScopeTVTriggerEvent
```

```
Public Enumeration ScopeTVTriggerEvent
```

Members

Member name	Value	Description
Field1	1	A trigger on field 1 of the signal.
Field2	2	A trigger on field 2 of the signal.
AnyField	3	A trigger on the first field acquired.
AnyLine	4	A trigger on the first line acquired.
LineNumber	5	A trigger on a specific line of a video signal. Valid values vary depending on the SignalFormat configured.

ScopeTVTriggerPolarity Enumeration

Specifies whether a rising edge or a falling edge triggers the digitizer.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeTVTriggerPolarity
```

```
Public Enumeration ScopeTVTriggerPolarity
```

Members

Member name	Value	Description
Positive	1	A positive (rising) edge passing through the trigger level triggers the digitizer. For a digital trigger, this corresponds to a low-to-high transition.
Negative	2	A negative (falling) edge passing through the trigger level triggers the digitizer. For a digital trigger, this corresponds to a high-to-low transition.

Specifies the type of video signal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeTVTriggerSignalFormat
```

```
Public Enumeration ScopeTVTriggerSignalFormat
```

Members

Member name	Value	Description
-------------	-------	-------------

Ntsc	1	An NTSC signal format that supports line numbers from 1 to 525.
Pal	2	A PAL signal format that supports line numbers from 1 to 625.
Secam	3	A SECAM signal format that supports line numbers from 1 to 625.
MPal	1001	An M-PAL signal format that supports line numbers from 1 to 525.
I480Lines5994FieldsPerSecond	1010	A signal that contains 480 lines, interlaced, 59.94 fields per second.
I480Lines60FieldsPerSecond	1011	A signal that contains 480 lines, interlaced, 60 fields per second.
P480Lines5994FramesPerSecond	1015	A signal that contains 480 lines, progressive, 59.94 fields per second.
P480Lines60FramesPerSecond	1016	A signal that contains 480 lines, progressive, 60 frames per second.
I576Lines50FieldsPerSecond	1020	A signal that contains 576 lines, interlaced, 50 fields per second.
P576Lines50FramesPerSecond	1025	A signal that contains 576 lines, progressive, 50 frames per second.
P720Lines50FramesPerSecond	1031	A signal that contains 720 lines, progressive, 50 frames per second.
P720Lines5994FramesPerSecond	1032	A signal that contains 720 lines, progressive, 59.94 frames per second.
P720Lines60FramesPerSecond	1033	A signal that contains 720 lines, progressive, 60 frames per second.
I1080Lines50FieldsPerSecond	1040	A signal that contains 1,080 lines, interlaced, 50 fields per second.
I1080Lines5994FieldsPerSecond	1041	A signal that contains 1,080 lines, interlaced, 59.94 fields per second.
I1080Lines60FieldsPerSecond	1042	A signal that contains 1,080 lines, interlaced, 60 fields per second.
P1080Lines24FramesPerSecond	1045	A signal that contains 1,080 lines, progressive, 24 frames per second.

ScopeVerticalCoupling Enumeration

Specifies how the digitizer couples the input signal for the channel.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeVerticalCoupling
```

```
Public Enumeration ScopeVerticalCoupling
```

Members

Member name	Value	Description
AC	0	AC vertical coupling.
DC	1	DC vertical coupling.
Ground	2	Ground vertical coupling.

Remarks

When input coupling changes, the input stage takes a finite amount of time to settle.

ScopeWarning Class

Provides warning codes for the warnings raised by the underlying driver.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeWarning

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeWarning
```

```
Public NotInheritable Class ScopeWarning
```

The ScopeWarning type exposes the following members.

Properties

	Name	Description
	AdcOverload	Gets the warning code when one or more channels has an ADC overload.
	AutoSetupNoSignal	Gets the warning code when auto Setup was unable to find a signal.
	ChannelOverload	Gets the warning code when the 50 ohm protection on one or more channels has been disabled because of excess signal power.
	Code	Gets the GUID code assigned to the warning.

 DataOverflow	Gets the warning code when an Onboard Signal Processing feature has caused the input data to overflow outside the valid vertical range.
 ErrorQueryNotSupportedWarningCode	Gets the warning code when Error Query is not supported.
 HeaterCircuitTemperature	Gets the warning code when onboard temperature stabilization circuit requires calibration.
 InvalidData	Gets the warning code when data acquired during the acquisition is possibly invalid.
 InvalidWaveformElement	Gets the warning code when one of the elements in the waveform array is invalid.
 P2POverflow	Gets the warning code when one or more peer-to-peer endpoints has overflowed.
 PLLUnlocked	Gets the warning code when the PLL is not locked.
 PLLUnlockedAndAdcOverload	Gets the warning code when the PLL is not locked and the ADC has an overload.
 Text	Gets the message related to the warning.
 TimestampRollOver	Gets the warning code when the timestamp counter has rolled over.
 UnexpectedDriverWarningCode	Gets the warning code for an unexpected driver warning.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeWarning and the object that you specify are equal. (Overrides ObjectEquals(Object) .)
 Equals(ScopeWarning)	Determines whether the current instance of ScopeWarning and the ScopeWarning object that you specify are equal.
 Equals(ScopeWarning, Boolean)	Checks for the equality for the two ScopeWarning objects considering whether warning message should be compared or not.
 GetHashCode	Returns the hash code for the current instance of ScopeWarning. (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance.

		(Inherited from Object .)
	ToString	Converts the current instance of ScopeWarning to string. (Overrides ObjectToString .)

[Top](#)

Operators

	Name	Description
	Equality	Checks whether the two instances of ScopeWarning are equal.
	Inequality	Checks whether the two instances of ScopeWarning are unequal.

[Top](#)

Remarks

Represents the list of warnings returned by the driver.

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeWarning Properties

The [ScopeWarning](#) type exposes the following members.

Properties

	Name	Description
	AdcOverload	Gets the warning code when one or more channels has an ADC overload.

 AutoSetupNoSignal	Gets the warning code when auto Setup was unable to find a signal.
 ChannelOverload	Gets the warning code when the 50 ohm protection on one or more channels has been disabled because of excess signal power.
 Code	Gets the GUID code assigned to the warning.
 DataOverflow	Gets the warning code when an Onboard Signal Processing feature has caused the input data to overflow outside the valid vertical range.
 ErrorQueryNotSupportedWarningCode	Gets the warning code when Error Query is not supported.
 HeaterCircuitTemperature	Gets the warning code when onboard temperature stabilization circuit requires calibration.
 InvalidData	Gets the warning code when data acquired during the acquisition is possibly invalid.
 InvalidWaveformElement	Gets the warning code when one of the elements in the waveform array is invalid.
 P2POverflow	Gets the warning code when one or more peer-to-peer endpoints has overflowed.
 PLLUnlocked	Gets the warning code when the PLL is not locked.
 PLLUnlockedAndAdcOverload	Gets the warning code when the PLL is not locked and the ADC has an overload.
 Text	Gets the message related to the warning.
 TimestampRollOver	Gets the warning code when the timestamp counter has rolled over.
 UnexpectedDriverWarningCode	Gets the warning code for an unexpected driver warning.

Gets the message related to the warning.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Text { get; }
```

```
Public ReadOnly Property Text As String
    Get
```

Property Value

Type: [String](#)

The warning message.

ScopeWarningTimestampRollOver Property

Gets the warning code when the timestamp counter has rolled over.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static Guid TimestampRollOver { get; }
```

```
Public Shared ReadOnly Property TimestampRollOver As Guid  
    Get
```

Property Value

Type: [Guid](#)

The GUID ("5ED8BC0C-C2D2-4683-87D7-14E078A945A2") of the warning.

ScopeWarningUnexpectedDriverWarningCode Property

Gets the warning code for an unexpected driver warning.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static Guid UnexpectedDriverWarningCode { get; }
```

```
Public Shared ReadOnly Property UnexpectedDriverWarningCode As Guid  
    Get
```

Property Value

Type: [Guid](#)

The GUID ("2cca167a-dbe8-4ba4-88dd-8b8faaf7b119") of the warning.

ScopeWarning Properties

The [ScopeWarning](#) type exposes the following members.

Properties

	Name	Description
	<u>AdcOverload</u>	Gets the warning code when one or more channels has an ADC overload.
	<u>AutoSetupNoSignal</u>	Gets the warning code when auto Setup was unable to find a signal.
	<u>ChannelOverload</u>	Gets the warning code when the 50 ohm protection on one or more channels has been disabled because of excess signal power.
	<u>Code</u>	Gets the GUID code assigned to the warning.
	<u>DataOverflow</u>	Gets the warning code when an Onboard Signal Processing feature has caused the input data to overflow outside the valid vertical range.
	<u>ErrorQueryNotSupportedWarningCode</u>	Gets the warning code when Error Query is not supported.
	<u>HeaterCircuitTemperature</u>	Gets the warning code when onboard temperature stabilization circuit requires calibration.
	<u>InvalidData</u>	Gets the warning code when data acquired during the acquisition is possibly invalid.
	<u>InvalidWaveformElement</u>	Gets the warning code when one of the elements in the waveform array is invalid.
	<u>P2POverflow</u>	Gets the warning code when one or more peer-to-peer endpoints has overflowed.
	<u>PLLUnlocked</u>	Gets the warning code when the PLL is not locked.
	<u>PLLUnlockedAndAdcOverload</u>	Gets the warning code when the PLL is not locked and the ADC has an overload.
	<u>Text</u>	Gets the message related to the warning.
	<u>TimestampRollOver</u>	Gets the warning code when the timestamp counter has rolled over.
	<u>UnexpectedDriverWarningCode</u>	Gets the warning code for an unexpected driver warning.

ScopeWarningAdcOverload Property

Gets the warning code when one or more channels has an ADC overload.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static Guid AdcOverload { get; }
```

```
Public Shared ReadOnly Property AdcOverload As Guid  
    Get
```

Property Value

Type: [Guid](#)

The GUID ("12676361-21C7-4CF6-89FD-C02AB003F5FF") of the warning.

ScopeWarning Methods

The [ScopeWarning](#) type exposes the following members.

Methods

Name	Description
 Equals(Object)	Determines whether the current instance of ScopeWarning and the object that you specify are equal. (Overrides Object.Equals(Object) .)
 Equals(ScopeWarning)	Determines whether the current instance of ScopeWarning and the ScopeWarning object that you specify are equal.

 Equals(ScopeWarning, Boolean)	Checks for the equality for the two ScopeWarning objects considering whether warning message should be compared or not.
 GetHashCode	Returns the hash code for the current instance of ScopeWarning . (Overrides ObjectGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Converts the current instance of ScopeWarning to string. (Overrides ObjectToString .)

Determines whether the current instance of [ScopeWarning](#) and the object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

The object to be compared to the current instance of [ScopeWarning](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

C#VB

```
public bool Equals(  
    ScopeWarning warning,
```

```
bool ignoreWarningMessage
)
```

```
Public Function Equals (
    warning As ScopeWarning,
    ignoreWarningMessage As Boolean
) As Boolean
```

Parameters

warning

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWarning](#)
The [ScopeWarning](#) object to which this object is compared.

ignoreWarningMessage

Type: [SystemBoolean](#)

Specifies if the warning message must be ignored. If the warning message is to be ignored, then value of ignoreWarningMessage is . If warning message is to be compared then value of ignoreWarningMessage is .

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeWarningEquality Operator

Checks whether the two instances of [ScopeWarning](#) are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeWarning warning1,
    ScopeWarning warning2
)
```

```
Public Shared Operator = (
    warning1 As ScopeWarning,
    warning2 As ScopeWarning
) As Boolean
```

Parameters

warning1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWarning](#)
A [ScopeWarning](#) object.

warning2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWarning](#)
A [ScopeWarning](#) object for the comparison.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeWarningEquality Operator

Checks whether the two instances of [ScopeWarning](#) are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeWarning warning1,
    ScopeWarning warning2
)
```

```
Public Shared Operator = (
    warning1 As ScopeWarning,
    warning2 As ScopeWarning
) As Boolean
```

Parameters

warning1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWarning](#)
A [ScopeWarning](#) object.

warning2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWarning](#)
A [ScopeWarning](#) object for the comparison.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

ScopeWarningInequality Operator

Checks whether the two instances of [ScopeWarning](#) are unequal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public static bool operator !=(
    ScopeWarning warning1,
    ScopeWarning warning2
)
```

```
Public Shared Operator <> (
    warning1 As ScopeWarning,
    warning2 As ScopeWarning
) As Boolean
```

Parameters

warning1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWarning](#)
A [ScopeWarning](#) object.

warning2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWarning](#)
A [ScopeWarning](#) object.

Return Value

Type: [Boolean](#)

if the two instances are unequal; otherwise, .

ScopeWarningEventArgs Class

Represents the properties under the Warning Event Args raised in case of a driver warning.

Inheritance Hierarchy

[SystemObject](#)

[SystemEventArgs](#)

[NationalInstruments.ModularInstruments.NIScopeScopeWarningEventArgs](#)

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: [NationalInstruments.ModularInstruments.NIScope.Fx45](#) (in

[NationalInstruments.ModularInstruments.NIScope.Fx45.dll](#)) Version: 2020

Syntax

C#VB

```
public sealed class ScopeWarningEventArgs : EventArgs
```

```
Public NotInheritable Class ScopeWarningEventArgs
    Inherits EventArgs
```

The `ScopeWarningEventArgs` type exposes the following members.

Properties

	Name	Description
	Code	Gets the Warning Event Args code.
	Text	Gets the Warning Event Args message.
	Warning	Gets the warning set in the Warning Event Args.

[Top](#)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to [NI High-Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeWarningEventArgsCode Property

Gets the Warning Event Args code.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public Guid Code { get; }
```

```
Public ReadOnly Property Code As Guid  
    Get
```

Property Value

Type: [Guid](#)

The GUID code of the warning.

ScopeWarningEventArgsCode Property

Gets the Warning Event Args code.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)
Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public Guid Code { get; }
```

```
Public ReadOnly Property Code As Guid
    Get
```

Property Value

Type: [Guid](#)

The GUID code of the warning.

ScopeWarningEventArgsText Property

Gets the Warning Event Args message.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public string Text { get; }
```

```
Public ReadOnly Property Text As String
    Get
```

Property Value

Type: [String](#)

A [String](#) representing the message.

ScopeWaveformInfo Structure

Contains timing and scaling information about the waveform obtained from the Fetch and Read methods.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public struct ScopeWaveformInfo
```

```
Public Structure ScopeWaveformInfo
```

The ScopeWaveformInfo type exposes the following members.

Properties

Name	Description
 AbsoluteInitialX	Gets the timestamp, in seconds, of the first fetched sample that is comparable between records and acquisitions; all digitizers do not support this field.

 ActualNumberOfSamples	Gets the actual number of samples fetched and placed in the waveform array.
 Gain	Gets the gain factor of the given channel.
 Offset	Gets the offset factor of the given channel.
 RelativeInitialX	Gets the time, in seconds, from the trigger to the first sample in the fetched waveform.
 XIncrement	Gets the time, in seconds, between points in the acquired waveform.

[Top](#)

Methods

Name	Description
 Equals(Object)	Determines if the current instance of ScopeWaveformInfo and the object that you specify are equal. (Overrides ValueTypeEquals(Object) .)
 Equals(ScopeWaveformInfo)	Determines whether the current instance of ScopeWaveformInfo and the ScopeWaveformInfo object that you specify are equal.
 GetHashCode	Returns the hash code for the current instance of ScopeWaveformInfo. (Overrides ValueTypeGetHashCode .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns the fully qualified type name of this instance. (Inherited from ValueType .)

[Top](#)

Operators

Name	Description
 Equality	Checks whether the two instances of ScopeWaveformInfo are equal.
 Inequality	Checks whether the two instances of ScopeWaveformInfo are unequal.

[Top](#)

Remarks

For more information, refer to [NI High-Speed Digitizers Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

Determines if the current instance of [ScopeWaveformInfo](#) and the object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

The object to be compared to the current instance of [ScopeWaveformInfo](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeWaveformInfoEquals Method (Object)

Determines if the current instance of [ScopeWaveformInfo](#) and the object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override bool Equals(  
    Object obj  
)
```

```
Public Overrides Function Equals (  
    obj As Object  
) As Boolean
```

Parameters

obj

Type: [SystemObject](#)

The object to be compared to the current instance of [ScopeWaveformInfo](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

ScopeWaveformInfoEquals Method (ScopeWaveformInfo)

Determines whether the current instance of [ScopeWaveformInfo](#) and the [ScopeWaveformInfo](#) object that you specify are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public bool Equals(  
    ScopeWaveformInfo waveformInfo  
)
```

```
Public Function Equals (  
    waveformInfo As ScopeWaveformInfo  
) As Boolean
```

Parameters

waveformInfo

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)
The [ScopeWaveformInfo](#) object to be compared to the current instance of [ScopeWaveformInfo](#).

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

See Also

Reference

[ScopeWaveformInfo Structure](#)

ScopeWaveformInfoGetHashCode Method

Returns the hash code for the current instance of [ScopeWaveformInfo](#).

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public override int GetHashCode()
```

```
Public Overrides Function GetHashCode As Integer
```

Return Value

Type: [Int32](#)

An [Int32](#) that represents the hash code for the current instance of [ScopeWaveformInfo](#).

ScopeWaveformInfoEquality Operator

Checks whether the two instances of [ScopeWaveformInfo](#) are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)[VB](#)

```
public static bool operator ==(
    ScopeWaveformInfo waveformInfo1,
    ScopeWaveformInfo waveformInfo2
)
```

```
Public Shared Operator = (
    waveformInfo1 As ScopeWaveformInfo,
    waveformInfo2 As ScopeWaveformInfo
) As Boolean
```

Parameters

waveformInfo1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)
A [ScopeWaveformInfo](#) object.

waveformInfo2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)
A [ScopeWaveformInfo](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Checks whether the two instances of [ScopeWaveformInfo](#) are equal.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public static bool operator ==(
    ScopeWaveformInfo waveformInfo1,
    ScopeWaveformInfo waveformInfo2
)
```

```
Public Shared Operator = (  
    waveformInfo1 As ScopeWaveformInfo,  
    waveformInfo2 As ScopeWaveformInfo  
) As Boolean
```

Parameters

waveformInfo1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)
A [ScopeWaveformInfo](#) object.

waveformInfo2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)
A [ScopeWaveformInfo](#) object.

Return Value

Type: [Boolean](#)

if the two instances are equal; otherwise, .

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in
NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#](#)
[VB](#)

```
public static bool operator !=(
    ScopeWaveformInfo waveformInfo1,
    ScopeWaveformInfo waveformInfo2
)
```

```
Public Shared Operator <> (
    waveformInfo1 As ScopeWaveformInfo,
    waveformInfo2 As ScopeWaveformInfo
) As Boolean
```

Parameters

waveformInfo1

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)
A [ScopeWaveformInfo](#) object.

waveformInfo2

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWaveformInfo](#)
A [ScopeWaveformInfo](#) object.

Return Value

Type: [Boolean](#)

if the two instances are unequal; otherwise, .

ScopeWidthTrigger Class

Represents the sub-object that contains methods and properties used to configure common properties for width triggering.

Inheritance Hierarchy

SystemObject

NationalInstruments.ModularInstruments.NIScopeScopeSubObject
 NationalInstruments.ModularInstruments.NIScopeScopeWidthTrigger

Namespace: NationalInstruments.ModularInstruments.NIScope

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeWidthTrigger : ScopeSubObject,
    IIVI_ScopeTriggerWidth
```

```
Public NotInheritable Class ScopeWidthTrigger
    Inherits ScopeSubObject
    Implements IIVI_ScopeTriggerWidth
```

The ScopeWidthTrigger type exposes the following members.

Properties

Name	Description
 ThresholdHigh	Gets or sets the upper time threshold you want the digitizer to use for width triggering.
 ThresholdLow	Gets or sets the lower time threshold you want the digitizer to use for width triggering.
 WidthCondition	Gets or sets the width condition you want the digitizer to use for width triggering.
 WidthPolarity	Gets or sets the width polarity you want the digitizer to use for width triggering.

Top

Methods

Name	Description
------	-------------

⇒ Configure(String, Double, PrecisionTimeSpan, PrecisionTimeSpan, Polarity, WidthCondition)	Configures common properties for analog width triggering.
⇒ Configure(ScopeTriggerSource, Double, Double, Double, ScopeTriggerPolarity, ScopeWidthTriggerCondition, ScopeTriggerCoupling, PrecisionTimeSpan, PrecisionTimeSpan)	Configures common properties for analog width triggering.
⇒ Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
⇒ GetHashCode	Serves as the default hash function. (Inherited from Object .)
⇒ GetType	Gets the Type of the current instance. (Inherited from Object .)
⇒ ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Trigger related topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeWidthTriggerThresholdHigh Property

Gets or sets the upper time threshold you want the digitizer to use for width triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan ThresholdHigh { get; set; }
```

```
Public Property ThresholdHigh As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The upper voltage threshold you want the digitizer to use for width triggering.

Exceptions

Exception	Condition
ObjectDisposedException	ThresholdHigh was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for upper threshold was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer triggers when the trigger signal enters or leaves the threshold window specified with this property and [ThresholdLow](#).

ScopeWidthTriggerThresholdHigh Property

Gets or sets the upper time threshold you want the digitizer to use for width triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan ThresholdHigh { get; set; }
```

```
Public Property ThresholdHigh As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The upper voltage threshold you want the digitizer to use for width triggering.

Exceptions

Exception	Condition
ObjectDisposedException	ThresholdHigh was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for upper threshold was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer triggers when the trigger signal enters or leaves the threshold window specified with this property and [ThresholdLow](#).

ScopeWidthTriggerThresholdLow Property

Gets or sets the lower time threshold you want the digitizer to use for width triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public PrecisionTimeSpan ThresholdLow { get; set; }
```

```
Public Property ThresholdLow As PrecisionTimeSpan
    Get
    Set
```

Property Value

Type: PrecisionTimeSpan

The lower voltage threshold you want the digitizer to use for width triggering.

Exceptions

Exception	Condition
ObjectDisposedException	ThresholdLow was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for lower threshold was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer triggers when the trigger signal enters or leaves the threshold window specified with this property and [ThresholdHigh](#).

ScopeWidthTriggerWidthCondition Property

Gets or sets the width condition you want the digitizer to use for width triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public ScopeWidthTriggerCondition WidthCondition { get; set; }
```

```
Public Property WidthCondition As ScopeWidthTriggerCondition
    Get
    Set
```

Property Value

Type: [ScopeWidthTriggerCondition](#)

The width condition you want the digitizer to use for width triggering.

Exceptions

Exception	Condition
-----------	-----------

ObjectDisposedException	WidthCondition was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviDriverException	The value for width condition was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer triggers when the width is within or outside of the threshold window.

ScopeWidthTriggerWidthPolarity Property

Gets or sets the width polarity you want the digitizer to use for width triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public ScopeTriggerPolarity WidthPolarity { get; set; }
```

```
Public Property WidthPolarity As ScopeTriggerPolarity
    Get
    Set
```

Property Value

Type: [ScopeTriggerPolarity](#)

The width polarity you want the digitizer to use for width triggering.

Exceptions

Exception	Condition
ObjectDisposedException	WidthPolarity was accessed after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	The value for width polarity was invalid. - or - The underlying NI-SCOPE driver returned an error.

Remarks

The digitizer triggers when the width is positive, negative or either.

ScopeWidthTriggerConfigure Method (String, Double, PrecisionTimeSpan, PrecisionTimeSpan, Polarity, WidthCondition)

Configures common properties for analog width triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public void Configure(  
    string source,  
    double level,  
    PrecisionTimeSpan thresholdLow,  
    PrecisionTimeSpan thresholdHigh,  
    Polarity polarity,  
    WidthCondition condition  
)
```

```
Public Sub Configure (  
    source As String,  
    level As Double,  
    thresholdLow As PrecisionTimeSpan,  
    thresholdHigh As PrecisionTimeSpan,  
    polarity As Polarity,  
    condition As WidthCondition  
)
```

Parameters

source

Type: [SystemString](#)

The trigger source.

level

Type: [SystemDouble](#)

A value indicating the voltage level at which the pulse will trigger.

thresholdLow

Type: [Ivi.DriverPrecisionTimeSpan](#)

A value indicating the pulse width high threshold.

thresholdHigh

Type: [Ivi.DriverPrecisionTimeSpan](#)

A value indicating the pulse width low threshold.

polarity

Type: Ivi.ScopePolarity

The polarity that the width will trigger, either positive, negative, or either.

condition

Type: Ivi.ScopeWidthCondition

The condition for the pulse to trigger on width greater than or less than the threshold.

Implements

IviScopeTriggerWidthConfigure(String, Double, PrecisionTimeSpan, PrecisionTimeSpan, Polarity, WidthCondition)

Exceptions

Exception	Condition
ObjectDisposedException	Configure(String, Double, PrecisionTimeSpan, PrecisionTimeSpan, Polarity, WidthCondition) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	<p>The value for lower threshold was invalid. - or -</p> <p>The value for upper threshold was invalid. - or -</p> <p>The value for polarity was invalid. - or -</p> <p>The value for width condition was invalid. - or -</p> <p>The underlying NI-SCOPE driver returned an error.</p>

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
The trigger source.

level

Type: [SystemDouble](#)
A value indicating the voltage level at which the pulse will trigger.

triggerLowThreshold

Type: [SystemDouble](#)
A value indicating the pulse width low threshold.

triggerHighThreshold

Type: [SystemDouble](#)
A value indicating the pulse width high threshold.

triggerPolarity

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerPolarity](#)
The polarity that the width will trigger, either positive, negative, or either.

triggerWidthCondition

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWidthTriggerCondition](#)
The condition for the pulse to trigger on width greater than or less than the threshold.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)

A value indicating whether to apply coupling and filtering options to the trigger signal.

triggerHoldoff

Type: [NationalInstruments.PrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

Type: [NationalInstruments.PrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after receiving the trigger to start acquiring data.

Exceptions

Exception	Condition
ArgumentNullException	ScopeTriggerSource object passed in was null.
ObjectDisposedException	Configure(ScopeTriggerSource , Double, Double, Double, ScopeTriggerPolarity , ScopeWidthTriggerCondition , ScopeTriggerCoupling , PrecisionTimeSpan , PrecisionTimeSpan) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	<p>The value for lower threshold was invalid. - or -</p> <p>The value for upper threshold was invalid. - or -</p> <p>The value for polarity was invalid. - or -</p> <p>The value for width condition was invalid. - or -</p> <p>The value for coupling was invalid. - or -</p> <p>The value for holdoff was invalid. - or -</p> <p>The value for delay was invalid.</p>

- or -

The underlying NI-SCOPE driver returned an error.

ScopeWidthTriggerConfigure Method (String, Double, PrecisionTimeSpan, PrecisionTimeSpan, Polarity, WidthCondition)

Configures common properties for analog width triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#/VB

```
public void Configure(  
    string source,  
    double level,  
    PrecisionTimeSpan thresholdLow,  
    PrecisionTimeSpan thresholdHigh,  
    Polarity polarity,  
    WidthCondition condition  
)
```

```
Public Sub Configure (  
    source As String,  
    level As Double,  
    thresholdLow As PrecisionTimeSpan,  
    thresholdHigh As PrecisionTimeSpan,  
    polarity As Polarity,  
    condition As WidthCondition  
)
```

Parameters

source

Type: [SystemString](#)

The trigger source.

levelType: [SystemDouble](#)

A value indicating the voltage level at which the pulse will trigger.

thresholdLowType: [Ivi.DriverPrecisionTimeSpan](#)

A value indicating the pulse width high threshold.

thresholdHighType: [Ivi.DriverPrecisionTimeSpan](#)

A value indicating the pulse width low threshold.

polarityType: [Ivi.ScopePolarity](#)

The polarity that the width will trigger, either positive, negative, or either.

conditionType: [Ivi.ScopeWidthCondition](#)

The condition for the pulse to trigger on width greater than or less than the threshold.

Implements

[IviScopeTriggerWidthConfigure\(String, Double, PrecisionTimeSpan, PrecisionTimeSpan, Polarity, WidthCondition\)](#)

Exceptions

Exception	Condition
ObjectDisposedException	Configure(String, Double, PrecisionTimeSpan, PrecisionTimeSpan, Polarity, WidthCondition) was called after the associated NIScope or ScopeDriverUtility object was disposed.
IviCDriverException	<p>The value for lower threshold was invalid.</p> <p>- or -</p> <p>The value for upper threshold was invalid.</p> <p>- or -</p> <p>The value for polarity was invalid.</p> <p>- or -</p> <p>The value for width condition was invalid.</p> <p>- or -</p> <p>The underlying NI-SCOPE driver returned an error.</p>

    thresholdLow As PrecisionTimeSpan,  
    thresholdHigh As PrecisionTimeSpan,  
    polarity As Polarity,  
    condition As WidthCondition  
)
```

Parameters

source

Type: [SystemString](#)

The trigger source.

level

Type: [SystemDouble](#)

A value indicating the voltage level at which the pulse will trigger.

thresholdLow

Type: [Ivi.DriverPrecisionTimeSpan](#)

A value indicating the pulse width high threshold.

thresholdHigh

Type: [Ivi.DriverPrecisionTimeSpan](#)

A value indicating the pulse width low threshold.

polarity

Type: [Ivi.ScopePolarity](#)

The polarity that the width will trigger, either positive, negative, or either.

condition

Type: [Ivi.ScopeWidthCondition](#)

The condition for the pulse to trigger on width greater than or less than the threshold.

    triggerCoupling As ScopeTriggerCoupling,
    triggerHoldoff As PrecisionTimeSpan,
    triggerDelay As PrecisionTimeSpan
)
```

Parameters

triggerSource

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerSource](#)
The trigger source.

level

Type: [SystemDouble](#)
A value indicating the voltage level at which the pulse will trigger.

triggerLowThreshold

Type: [SystemDouble](#)
A value indicating the pulse width low threshold.

triggerHighThreshold

Type: [SystemDouble](#)
A value indicating the pulse width high threshold.

triggerPolarity

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerPolarity](#)
The polarity that the width will trigger, either positive, negative, or either.

triggerWidthCondition

Type: [NationalInstruments.ModularInstruments.NIScopeScopeWidthTriggerCondition](#)
The condition for the pulse to trigger on width greater than or less than the threshold.

triggerCoupling

Type: [NationalInstruments.ModularInstruments.NIScopeScopeTriggerCoupling](#)

A value indicating whether to apply coupling and filtering options to the trigger signal.

triggerHoldoff

Type: [NationalInstruments.PrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after detecting a trigger before enabling NI-SCOPE to detect another trigger.

triggerDelay

Type: [NationalInstruments.PrecisionTimeSpan](#)

The length of time, in seconds, that the digitizer waits after receiving the trigger to start acquiring data.

ScopeWidthTriggerCondition Enumeration

Specifies whether a pulse that is within or outside the high and low threshold triggers the oscilloscope.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public enum ScopeWidthTriggerCondition
```

```
Public Enumeration ScopeWidthTriggerCondition
```

Members

Member name	Value	Description
Within	1	Width of pulse is within threshold.
Outside	2	Width of pulse is outside threshold.

Remarks

The end-user specifies the [ThresholdHigh](#) and [ThresholdLow](#)

ScopeWindowReferenceTrigger Class

Represents sub-objects of ScopeWindowReferenceTrigger that contain properties related to the window reference trigger.

Inheritance Hierarchy

[SystemObject](#)

[NationalInstruments.ModularInstruments.NIScopeScopeSubObject](#)

NationalInstruments.ModularInstruments.NIScopeScopeWindowReferenceTrigger

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

C#VB

```
public sealed class ScopeWindowReferenceTrigger : ScopeSubObject
```

```
Public NotInheritable Class ScopeWindowReferenceTrigger
    Inherits ScopeSubObject
```

The ScopeWindowReferenceTrigger type exposes the following members.

Properties

Name	Description
 HighLevel	Gets or sets the upper voltage threshold you want the digitizer to use for window triggering.

 LowLevel	Gets or sets the lower voltage threshold you want the digitizer to use for window triggering.
 Mode	Gets or sets whether a trigger must occur when the signal enters or leaves the window as specified by LowLevel or HighLevel .

[Top](#)

Methods

Name	Description
 Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
 GetHashCode	Serves as the default hash function. (Inherited from Object .)
 GetType	Gets the Type of the current instance. (Inherited from Object .)
 ToString	Returns a string that represents the current object. (Inherited from Object .)

[Top](#)

Remarks

For more information, refer to the Trigger Window attributes topics in the [NI-SCOPE Function Reference Help](#).

Thread Safety

Any public static (Shared in Visual Basic) members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

ScopeWindowReferenceTriggerHighLevel Property

Gets or sets the upper voltage threshold you want the digitizer to use for window triggering.

Namespace: [NationalInstruments.ModularInstruments.NIScope](#)

Assembly: NationalInstruments.ModularInstruments.NIScope.Fx45 (in NationalInstruments.ModularInstruments.NIScope.Fx45.dll) Version: 2020

Syntax

[C#VB](#)

```
public double HighLevel { get; set; }
```

```
Public Property HighLevel As Double
    Get
    Set
```

Property Value

Type: [Double](#)

The values for this property must meet the following conditions:

High Trigger Level \leq Vertical Range/2 + Vertical Offset

High Trigger Level \geq (-Vertical Range/2) + Vertical Offset

High Trigger Level > Low Trigger Level

Remarks

The digitizer triggers when the trigger signal enters or leaves the window specified with HighLevel and this property.

Glossary

Prefixes

Symbol	Prefix	Value
p	pico	10^{-12}
n	nano	10^{-9}
μ	micro	10^{-6}
m	milli	10^{-3}
k	kilo	10^3
M	mega	10^6
G	giga	10^9
T	tera	10^{12}

A

AC	alternating current
AC-coupled	Allowing the transmission of AC signals while blocking DC signals.
AC coupling cutoff	The boundary between DC and AC signals.
accuracy	A measure of the capability of an instrument or sensor to faithfully indicate the value of the measured signal. This term is not related to resolution; however, the accuracy level can never be better than the resolution of the instrument.
active probe	An oscilloscope or instrument probe with built-in, active electronics. The built-in electronics are used to condition the signal—for example, to give a well-defined impedance or to connect the probe to a very high impedance circuit, whose signal would be degraded if transmitted over a longer signal lead. Active probes are especially used with high-frequency

	oscilloscopes, logic analyzers, and RF instruments.
ADE, application development environment	A software environment incorporating the development, debug, and analysis tools for software development. LabVIEW, Measurement Studio, and Visual Studio are examples.
<u>AGC</u>	automatic gain control—Applies gain to small signals to increase their bit resolution, so the signals can be processed by the DDC's resampling/interpolating halfband filters and output formatter.
amplitude	The voltage amplitude of a signal. When speaking of the amplitude of a signal, it is usually assumed the rms value for an AC signal. However, amplitude can also refer to the instantaneous amplitude, or the peak, peak-to-peak, or average amplitude, if so specified.
API	<u>application programming interface</u> — <ol style="list-style-type: none"> 1. A standardized set of subroutines or functions along with the parameters that a program can call. 2. A set of functions exported by a library.
asynchronous	<ol style="list-style-type: none"> 1. Hardware—A property of an event that occurs at an arbitrary time, without synchronization to a reference clock. 2. Software—An action or event that occurs at an unpredictable time with respect to the execution of a program.
attenuation	The reduction of a voltage or acoustical pressure. Measured referenced to the original voltage.
attenuator	An electronic device that reduces (attenuates) a voltage by a given amount. Attenuation is normally given in dB.
<u>averaging</u>	Averaging is a technique to improve frequency domain analysis accuracy. The principle is to average continuous frequency spectrums

	calculated out of continuous time domain waveform records. Averaging reduces noise and enhances frequency domain features for a tested system over time. Different averaging modes and averaging weighting are normally used in signal processing. For more information on the basic concepts of averaging, refer to Improving Accuracy through Averaging at zone.ni.com .
<u>B</u>	
backplane	An assembly, typically a printed circuit board (PCB), with 96-pin connectors and signal paths that bus the connector pins.
bandwidth	The range of frequencies present in a signal, or the range of frequencies to which a measuring device can respond.
bit	One binary digit, either 0 or 1.
block diagram	A pictorial description or representation of a program or algorithm. In LabVIEW, the block diagram consists of executable icons called nodes and wires that carry data between the nodes; the block diagram is the source code for the VI.
buffer	Temporary storage for acquired or generated data (software).
bus	The group of conductors that interconnect individual circuitry in a computer. Typically, a bus is the expansion vehicle to which I/O or other devices are connected. Examples of PC buses are the PCI bus, AT bus, and EISA bus.
byte	Eight related bits of data, an 8-bit binary number. Also used to denote the amount of memory required to store one byte of data.
<u>C</u>	
calibration	A means of verifying and adjusting the accuracy of a device.

CMRR	<p>common-mode rejection ratio—a measure of the capability of an instrument to reject a signal that is common to both input leads. For instance, if you measure a thermocouple in a noisy environment, the noise from the environment appears on both input leads. Therefore, this noise is a common-mode voltage signal that is rejected by an amount equal to the CMRR of the instrument. The CMRR is defined by the following equation:</p> $\text{CMRR} = 20 \log(\text{Differential Gain/ Common Mode Gain})$ <p>The ratio is important because it indicates how much of the common mode signal appears in your measurement. The value of the CMRR depends on signal frequency as well and must be specified as a function of frequency. An equivalent equation to represent CMRR is as follows:</p> $20 \log(\text{Measured Common Voltage/ Applied Common Voltage})$
coercion	The automatic conversion LabVIEW performs to change the numeric representation of a data element.
<u>D</u>	
data transfer	A technique for moving digital data from one system to another.
DC	Direct current
DC-coupled	Allowing the transmission of both AC and DC signals.
DDC mode	An operating mode in which certain digitizers can be used as a digital downconverter, allowing you to zoom in on data. This mode reduces the amount of data transferred into memory.
<u>DDC</u>	digital downconverter—a digital signal processing (DSP) chip that mixes, filters, and

	decimates sampled data. In essence, the DDC allows you to zoom in on a band of frequencies much narrower than the Nyquist band of the ADC. The lower sample rate means that signals of longer duration can be stored in the same amount of memory. For spectral analysis, a smaller, faster FFT can be used to look at only the band passed through the DDC.
<u>dead time</u>	A hardware specification relevant to multiple record acquisitions. Dead time is the total time between records that the digitizer is not acquiring. This time is required for the digitizer hardware to set up for the next record. For SMC-based digitizers, it is the time from the last post-reference trigger sample of the previous record to the first minimum pre-reference trigger sample leading into the next record.
digital trigger	A TTL level signal having two discrete levels—a high and a low level.
DLL	dynamic link library
driver	Software that controls a specific hardware device, such as DAQ devices, GPIB interface devices, PLCs, RTUs, and other I/O devices.
dynamic range	The dynamic range of a signal is the ratio of the strongest, or loudest part to the weakest, or softest, part of the signal, expressed in dB.
<u>E</u>	
EEPROM	electronically erasable programmable read-only memory—ROM that can be erased with an electrical signal and reprogrammed.
equivalent-time sampling (ETS)	The process of repeatedly sampling a repeating analog signal at different times in the waveform to get a high-time resolution (effective sampling rate). See also RIS .
extrema	The minimum and maximum values.
<u>F</u>	

filtering	A type of signal conditioning that allows you to attenuate unwanted portions of the signal you are trying to measure.
<u>foldover frequency</u>	One half of the sample rate.
frequency	The basic unit of rate, measured in events or oscillations per second using a frequency counter or spectrum analyzer. Frequency is the reciprocal of the period of a signal.
<u>fundamental frequency</u>	The intended frequency of operation.
<u>G</u>	
gain	The factor by which a signal is amplified, often expressed in dB. Gain as a function of frequency is commonly referred to as the magnitude of the frequency response function.
gain accuracy	A measure of deviation of the gain of an amplifier from the ideal gain. Also called gain error.
GPIB	General Purpose Interface Bus—Synonymous with HP-IB. With the spin-off of the instrument division of Hewlett Packard, the term HP-IB is no longer used. The standard bus used for controlling electronic instruments with a computer. Also called IEEE 488 bus because it is defined by ANSI/IEEE Standards 488-1978, 488.1-1987, and 488.2-1987.
<u>H</u>	
<u>harmonic</u>	In a complex signal, a component whose frequency is a multiple of the fundamental frequency.
<u>hysteresis</u>	Lag between making a change and the effect of the change.
<u>I</u>	

interrupt	A computer signal indicating that the CPU should suspend its current task to service a designated activity.
interrupt latency	The delay between the time hardware asserts an interrupt and when the interrupt service routine is activated.
ISA	Denotes a common expansion bus used in PCs: the 8-bit and 16-bit bus design featured in the IBM PC/AT.
IVI	Interchangeable Virtual Instrument—A software standard for creating a common interface (API) to common test and measurement instruments.
<u>J</u>	
jitter	The rapid variation of a clock or sampling frequency from an ideal constant frequency.
<u>L</u>	
LabVIEW	Laboratory Virtual Instrument Engineering Workbench—A program development application based on the programming language G and used commonly for test and measurement purposes.
library	A file containing compiled object code modules, each comprised of one or more functions, that can be linked to other object code modules that make use of these functions.
loading	The effect of connecting the output of one electronic device to the input of another, such as the connection of a unit under test to an instrument. The loading effect is the difference in the output value (for example, voltage) with and without the load. To prevent loading effects, the impedance of the load must be smaller than the output impedance of the source.

<u>L-Pad</u>	Refers to the basic structure of the network: one shunt and one series branch, which gives an arrangement in the shape of an L.
<u>M</u>	
master/slave	A type of network connection in which a request is transmitted to one or more destination nodes, and those nodes send a response back to the requesting node. In industrial applications, the responding (slave) device is usually a sensor or actuator, and the requesting (master) device is usually a controller.
measurement	The quantitative determination of a physical characteristic. In practice, measurement is the conversion of a physical quantity or observation to a domain where a human being or computer can determine the value.
<u>minimum rearm time</u>	A term describing behavior pertinent to multiple record acquisitions, also known as retriggerable acquisitions. When triggering a digitizer as quickly as possible, minimum rearm time is the time from one detected reference trigger to the next when the record length is at minimum (for example, 1 sample). Rearm time is a deterministic hardware specification, but varies based on digitizer configuration.
<u>N</u>	
normal mode	For the PXI/PCI-5922, an operating mode in which the digitizer is used like a conventional oscilloscope.
Nyquist frequency	When an analog signal is sampled at a rate more than twice that of its highest frequency component, it can be properly reconstructed when reconverted back to the analog domain. The required sampling rate is called the Nyquist frequency.

O

offset	The unwanted DC voltage due to amplifier offset voltages added to a signal.
offset error	A constant error added to a measurement along the whole transfer curve. For example, in $\mathbf{mx+b}$, the offset error is b .
ohm	The measure of resistance. One ohm is the resistance through which one ampere current flows at 1 V.
OSP	onboard signal processing
oscilloscope	An instrument that displays the time domain waveform(s) of one or more signals.
oversampling factor	Multiples of the maximum real-time sampling rate.
overshoot	The amount that a square wave or transient signal exceeds the desired level when transitioning from one voltage to another.

P

passband	The range of frequencies that a device can properly propagate or measure.
PCI	peripheral component interconnect—A high-performance expansion bus architecture originally developed by Intel to replace ISA and EISA; it is a standard for PCs and workstations and offers a theoretical maximum transfer rate of 132 Mbytes/s.
peak-to-peak	A measure of signal amplitude. The difference between the highest and lowest levels of the signal.
PFI	programmable function input
PLL	phase-locked loop—An electronic circuit which forces an output frequency to be locked to the same phase as a reference frequency.

posttriggering	The technique used on a device to acquire a programmed number of samples after trigger conditions are met.
pretriggering	The technique used on a DAQ device to keep a continuous buffer filled with data, so that when the trigger conditions are met, the sample includes the data leading up to the trigger condition.
PXI	PCI eXtensions for Instrumentation—A modular, computer-based instrumentation platform.
Q	
<u>quantization noise</u>	Noise introduced when a signal is digitized. Digitized signals always contain quantization noise because the resolution of the ADC is finite.
R	
range	The minimum and maximum analog signal levels that the ADC can digitize.
record	A collection of samples acquired relative to a trigger. For example, if a single trigger occurs and you acquire 1,000 samples, you have a single record of 1,000 samples. You can also perform multirecord acquisitions with multiple triggers. Each trigger initiates the acquisition of a record, provided that the trigger is correctly recognized by the device.
<u>resampler/halfband filter</u>	A polyphase filter that allows the output sample rate to have a non-integer relationship to the input sample rate. In essence, it acts as a fixed interpolation filter followed by an NCO controlled decimator.
resolution	The smallest signal increment that can be detected by a measurement system; resolution can be expressed in bits, in proportions, or in percent of full scale. For example, a system has

	12-bit resolution, one part in 4,096 resolution, and 0.0244 percent of full scale.
<u>RIS</u>	random interleaved sampling—A method of increasing effective sample rate by repetitively sampling a waveform.
<u>rms</u>	root mean square—A measure of signal amplitude. rms refers to the most common mathematical method of defining the effective voltage or current of an AC signal.
RTSI	real-time system integration bus—The NI timing bus that interconnects data acquisition devices directly by means of connectors on top of the devices for precise synchronization of functions.
<u>S</u>	
S	sample
s	seconds
sample	Single analog or digital input or output data point.
sample rate	Time interval between observations in a periodic sampling control system.
SNR	signal-to-noise ratio; the ratio of total signal to noise expressed in decibels (dB). The larger the number, the better. SNR is calculated by $SNR = 20 \log (\text{SignalRMS} / \text{NoiseRMS})$. This can be a peak, rms, or other amplitude that appropriately characterizes the data.
S/s	samples per second. Expresses the rate at which a device measures a signal.
synchronous	<ol style="list-style-type: none"> 1. Hardware—A property of an event that is synchronized to a reference clock. 2. Software—A property of a function that begins an operation and returns only when the operation is complete. A synchronous process is, therefore,

	"locked" and no other processes can run during this time.
<u>I</u>	
TDC	time-to-digital conversion
throughput rate	The data, measured in bytes/s, for a given continuous operation, calculated to include software overhead.
time stamps	The use of a free running clock to accurately record the time of an event.
TIS	time interleaved sampling
transfer rate	The rate, measured in bytes/s, at which data is moved from source to destination after software initialization and set up operations; the maximum rate at which the hardware can operate.
trigger	<ol style="list-style-type: none"> 1. Any event that causes, starts, or stops some form of data capture. 2. An external stimulus that initiates one or more instrument functions. Trigger stimuli include a front panel button, an external input voltage pulse, or a bus trigger command. The trigger may also be derived from attributes of the actual signal to be acquired, such as the level and slope of the signal.
trigger hysteresis	Refer to hysteresis .
<u>V</u>	
V	volts
<u>W</u>	
wave	A pattern that repeats over time.

waveform

A graphical display of a wave. A voltage waveform shows time on the horizontal (**x**) axis and voltage on the vertical (**y**) axis.

NI Services

National Instruments provides global services and support as part of our commitment to your success. Take advantage of product services in addition to training and certification programs that meet your needs during each phase of the application life cycle; from planning and development through deployment and ongoing maintenance.

To get started, create an account or log in to your National Instruments User Profile at ni.com/myproducts and register your product.

As a registered NI product user, you are entitled to the following benefits:

- Access to applicable product services.
- Easier product management with an online account.
- Receive critical part notifications, software updates, and service expirations.

Services and Resources

- **Maintenance and Hardware Services**—NI helps you identify your systems' accuracy and reliability requirements and provides warranty, sparing, and calibration services to help you maintain accuracy and minimize downtime over the life of your system. Visit ni.com/services for more information.
 - **Warranty and Repair**—All NI hardware features a one-year standard warranty that is extendable up to five years. NI offers repair services performed in a timely manner by highly trained factory technicians using only original parts at a National Instruments service center.
 - **Calibration**—Through regular calibration, you can quantify and improve the measurement performance of an instrument. NI provides state-of-the-art calibration services. If your product supports calibration, you can obtain the calibration certificate for your product at ni.com/calibration.

- **System Integration**—If you have time constraints, limited in-house technical resources, or other project challenges, National Instruments Alliance Partner members can help. To learn more, call your local NI office or visit ni.com/alliance.
- **Training and Certification**—The NI training and certification program is the most effective way to increase application development proficiency and productivity. Visit ni.com/training for more information.
 - The Skills Guide assists you in identifying the proficiency requirements of your current application and gives you options for obtaining those skills consistent with your time and budget constraints and personal learning preferences. Visit ni.com/skills-guide to see these custom paths.
 - NI offers courses in several languages and formats including instructor-led classes at facilities worldwide, courses on-site at your facility, and online courses to serve your individual needs.
- **Technical Support**—Support at ni.com/support includes the following resources:
 - **Self-Help Technical Resources**—Visit ni.com/support for software drivers and updates, a searchable KnowledgeBase, product manuals, step-by-step troubleshooting wizards, thousands of example programs, tutorials, application notes, instrument drivers, and so on. Registered users also receive access to the NI Discussion Forums at ni.com/forums. NI Applications Engineers make sure every question submitted online receives an answer.
 - **Software Support Service Membership**—The Standard Service Program (SSP) is a renewable one-year subscription included with almost every NI software product, including NI Developer Suite. This program entitles members to direct access to NI Applications Engineers through phone and email for one-to-one technical support, as well as exclusive access to online training modules at ni.com/self-paced-training. NI also offers flexible extended contract options that guarantee your SSP benefits are available without interruption for as long as you need them. Visit ni.com/ssp for more information.

- **Declaration of Conformity (DoC)**—A DoC is our claim of compliance with the Council of the European Communities using the manufacturer's declaration of conformity. This system affords the user protection for electromagnetic compatibility (EMC) and product safety. You can obtain the DoC for your product by visiting ni.com/certification.

For information about other technical support options in your area, visit ni.com/services or contact your local office at ni.com/contact.

You can also visit the **Worldwide Offices** section of ni.com/niglobal to access the branch office websites, which provide up-to-date contact information, support phone numbers, email addresses, and current events.
