

EV26124-R-00A

4-Cell, 24V Input, 600kHz, Switching Li-Ion Battery Charger EV Board

DESCRIPTION

The EV26124-R-00A is an evaluation board for the MP26124, a high-performance, 4-cell, Li-ion battery switching charger with a built-in internal power MOSFET.

The EV26124-R-00A achieves 1A of charge current over a wide input supply range. The charge current can be programmed by sensing the current through an accurate sense resistor.

The MP26124 regulates the charge current and full-charge voltage using two control loops to achieve a highly accurate CC charge and CV charge.

The MP26124 integrates trickle charge, auto-recharge, and charger timer functions.

Full protection features includes thermal protection, battery temperature monitoring, and protection. The IC also indicates AC adapter power good and charge status to the system.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input voltage	V_{IN}	10~24	V
Charge current	I_{CHG}	1	A

FEATURES

- Charge 4-Series Li-Ion Cells
- Wide Operating Input Range
- 1A Charging Current
- $\pm 0.75\%$ V_{BATT} Accuracy
- Up to 96% Efficiency
- Fixed 600kHz Frequency
- Preconditioning for Fully Depleted Batteries
- Charging Operation Indicator
- Input Supply and Battery Fault Indicator
- Thermal Shutdown
- Battery Temperature Monitor and Protection

APPLICATIONS

- Distributed Power Systems
- Chargers for 4-Cell Li-Ion Batteries
- Pre-Regulator for Linear Regulators
- Robots
- Cleaners

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS", the MPS logo, and "Simple, Easy Solutions" are trademarks of Monolithic Power Systems, Inc. or its subsidiaries.

QUICK-START GUIDE

This board is used for the MP26124 application of standalone switching chargers, which can charge four Li-ion batteries. The board layout accommodates the most commonly used capacitors.

The two LEDs are operating status indicators. When the input is sufficient for charging the battery load, the ACOK LED is on; otherwise, it is off. When the charging operation is normal, the CHGOK LED is on. If any event occurs including battery full, NTC fault, timer out, thermal protection, or EN disable, CHGOK LED turns off.

Particularly, CHGOK LED will be twinkling if BATT is floated.

Follow the steps below to quick-start the board.

1. Charge current setting:

The charge current can be programmed by the sense resistor R4 with Equation (1):

$$I_{\text{CHG}}(\text{A}) = \frac{200\text{mV}}{R4(\text{m}\Omega)} \quad (1)$$

2. Preset the power supply output to 24V and then turn it off. Attach the positive and negative ends of the power supply output to the VIN and GND pins, respectively.
3. Attach the positive and negative ends of the battery to the BATT and GND pins, respectively.
4. Turn the power supply on. The board starts up automatically if EN is pulled to GND.
5. To use the enable function, apply a digital input to the EN pin. Drive EN above 1.8V to turn off the charger. Drive EN below 0.4V to turn on the charger.

Refer to the MP26124 datasheet for further detailed information.
