

Evaluating the ADGS2414D 0.56 Ω On Resistance High Density Octal SPST Switch

FEATURES

- SPI with error detection
 - Includes CRC, invalid read and write addresses, and SCLK count error detection
- Analog supply voltages
 - ▶ Dual supply: ±4.5 V to ±16.5 V
 - ▶ Single supply: 5 V to 20 V
- ▶ PC control in conjunction with the evaluation software
- ▶ EVAL-SDP-CB1Z (SDP-B) system demonstration platform

EVALUATION BOARD KIT CONTENTS

EV-ADGS2414DSDZ evaluation board

DOCUMENTS NEEDED

► ADGS2414D data sheet

EQUIPMENT NEEDED

- ▶ EVAL-SDP-CB1Z (SDP-B) controller board
- ▶ DC voltage source
 - ±16.5 V (dual supply)
 - 20 V (single supply)
- Optional 3.3 V digital logic supply
- Analog signal source
- Method to measure voltage, such as a digital multimeter (DMM)

SOFTWARE NEEDED

► ACE software with EV-ADGS2414DSDZ plugin

GENERAL DESCRIPTION

The EV-ADGS2414DSDZ is the evaluation board for the ADGS2414D. The ADGS2414D is an octal SPST switch controlled by a serial peripheral interface (SPI). The SPI has robust error detection features, including cyclic redundancy check (CRC) error detection, invalid read and write address detection, and SCLK count error detection. The ADGS2414D also supports burst mode, which decreases the time between SPI commands.

Figure 1 shows the EV-ADGS2414DSDZ in a typical evaluation setup. The EV-ADGS2414DSDZ is controlled by the system demonstration platform (SDP) EVAL-SDP-CB1Z (SDP-B), which connects to a PC via a USB port. The ADGS2414D is in the center of the evaluation board, and wire screw terminals are provided to connect to each of the source and drain pins. Three screw terminals power the device, and a fourth terminal provides users with a defined digital logic-supply voltage, if required. Alternatively, the digital logic-supply voltage can be supplied from the SDP-B. The EVAL-SDP-CB1Z (SDP-B) controller board is available to order on the Analog Devices, Inc., website.

For full details on the ADGS2414D, refer to the ADGS2414D data sheet, which should be consulted in conjunction with this user guide when using the EV-ADGS2414DSDZ.

EVALUATION BOARD PHOTOGRAPH

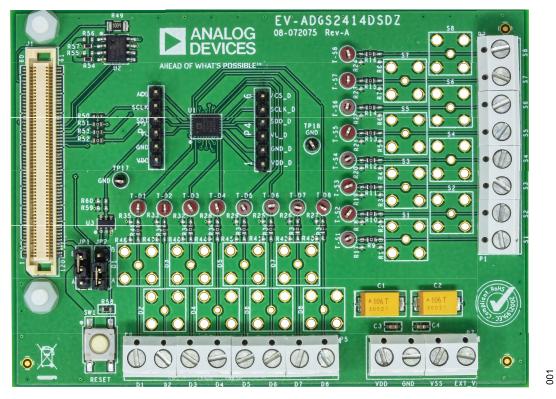

Figure 1. EV-ADGS2414DSDZ Evaluation Board Photograph

EVALUATION BOARD HARDWARE

POWER SUPPLIES

The P7 connector provides access to the supply pins of the ADGS2414D. V_{DD}, GND, and V_{SS} on P7 link to the appropriate pins on the ADGS2414D. For dual-supply voltages, the EV-ADGS2414DSDZ can be powered from ±4.5 V to ±16.5 V. For single-supply voltages, the GND and V_{SS} terminals must be connected together and can power the EV-ADGS2414DSDZ with 5 V to 20 V. Additionally, 3.3 V is supplied to the RESET/V_L pins of the ADGS2414D by the SDP-B controller board when the JP1 link is in Position B. When controlling the ADGS2414D by a method other than the SDP-B controller board, supply between 2.7 V and 5.5 V to the RESET/V_L pins of the ADGS2414D via the EXT_VL screw terminal input on P7. Ensure JP1 is in Position A.

INPUT SIGNALS

The P1, P2, P5, and P6 screw connectors connect to both the source and drain pins of the ADGS2414D. Additional subminiature version B (SMB) connector pads are available if extra connections are required.

Each trace on the source and drain sides of the EV-ADGS2414DSDZ includes two sets of 0603 pads that can place a load on the signal path to the ground. A 0 Ω resistor is placed in the signal path and can be replaced with a user-defined value. The resistor and the 0603 pads create a simple RC filter.

LINK OPTIONS

Ensure that the link options provided on the EV-ADGS2414DSDZ are set for the required operating conditions before using the evaluation board. Table 1 details the positions of the links to control the evaluation board via the SDP-B controller board using a PC and external power supplies. The functions of these link options are detailed in Table 2.

When using the SDP-B controller board in conjunction with the EV-ADGS2414DSDZ, place JP1 in Position B to avoid damage to the SDP-B.

Table 1. Link Options for SDP-B Control (Default)

Link Number	Option		
JP1	В		
JP2	В		

ROUTE THROUGH PINS FOR DAISY CHAINS

The P3 and P4 headers allow access to the route through pins of the ADGS2414D. Use the P3 and P4 headers to daisy-chain multiple EV-ADGS2414DSDZ devices together. To daisy-chain the EV-ADGS2414DSDZ devices, connect \overrightarrow{CS} D, SCLK_D, and SDO_D on P4 of one EV-ADGS2414DSDZ to \overrightarrow{CS} , SCLK, and SDI on P3 of the next EV-ADGS2414DSDZ. V_L, GND, and V_{DD} can also be shared between these evaluation boards via the P3 and P4 headers. However, because V_{SS} is only accessible from P7, connect V_{SS} to each daisy-chained EV-ADGS2414DSDZ.

Table 2. Link Functions

Link Number	Function
JP1	The JP1 link selects the source of the V_L voltage supplied to the ADGS2414D.
	Position A selects EXT_VL from P7.
	Position B selects 3.3 V from the SDP-B controller board.
JP2	The JP2 link selects how a hardware reset is performed.
	Position A indicates the SW1 push-button performs a hardware reset.
	Position B indicates the SDP-B controller board performs a hardware reset.

EVALUATION BOARD SOFTWARE

INSTALLING THE SOFTWARE

The EV-ADGS2414DSDZ uses the Analog Devices Analysis, Control, Evaluation (ACE) software. ACE is a desktop software application that allows users to evaluate and control multiple evaluation systems.

The ACE installer installs the necessary SDP drivers and .NET Framework 4 by default. Install ACE before connecting to the SDP-B controller board. The full instructions on how to install and use the ACE software can be found on the Analog Devices website at www.analog.com/ace.

After ACE is installed, the EV-ADGS2414DSDZ plugin appears when opening the application.

INITIAL SET UP

To set up the EV-ADGS2414DSDZ, complete the following steps:

- 1. Connect the EV-ADGS2414DSDZ to the SDP-B controller board via the 120-pin connector.
- 2. Connect the SDP-B controller board to the computer using the USB cable provided with the SDP-B.
- **3.** Power the EV-ADGS2414DSDZ as described in the Power Supplies section.
- 4. Run the ACE application. The EV-ADGS2414DSDZ plugin appears in the Attached Hardware section of the Start tab.
- 5. Double click the **ADGS2414D Board** evaluation board plugin to open the ADGS2414D chip view, as shown in Figure 2.

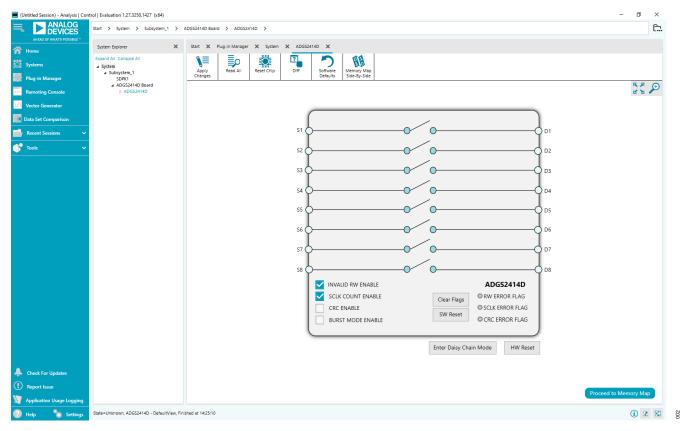

Figure 2. Chip View for the ADGS2414D

BLOCK DIAGRAM AND DESCRIPTION

The ADGS2414D chip view is similar to the functional block diagram shown in the ADGS2414D data sheet. Therefore, it is simple to correlate the functions on the EV-ADGS2414DSDZ with the descriptions in the data sheet. Refer to the ADGS2414D data sheet for a full description of each block, register, and setting. Some of the blocks and their functions are described in this section as they pertain to the EV-ADGS2414DSDZ. Figure 3 shows the full screen block diagram (with labels), and Table 3 describes the functionality of each labeled block.

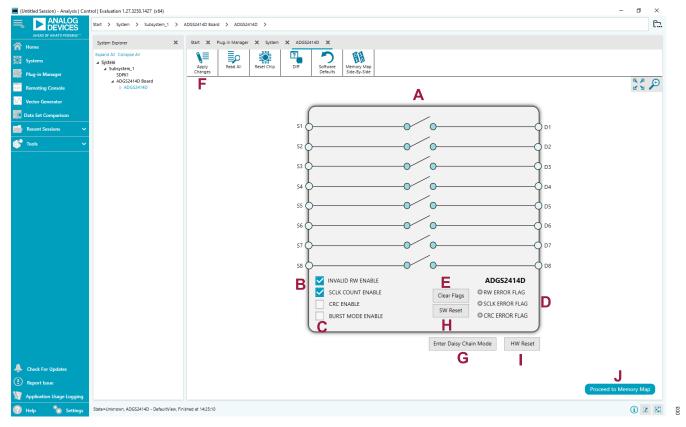

Figure 3. Chip View for the ADGS2414D with Labeled Block Diagram

Table 3. Block Diagram Functions

Label	Function
A	The eight switches configure SW1 to SW8 as open or closed. Click the switch to configure it.
	INVALID RW ENABLE, SCLK COUNT ENABLE, and CRC ENABLE. Select or clear these check boxes to enable or disable the error detection features on the
В	SPI.
С	BURST MODE ENABLE. Select or clear this check box to enable or disable burst mode.
D	RW ERROR FLAG, SCLK ERROR FLAG, and CRC ERROR FLAG. These indicators illuminate red if flags assert in the error flags register.
E	Clear Flags. Click this button to clear the error flags register.
F	Apply Changes. Click this button to apply all modified values to the devices.
G	Enter Daisy Chain Mode. Click this button to put all evaluation boards that are connected in a daisy-chain configuration into daisy-chain mode.
Н	SW Reset. Click this button to perform a software reset on the ADGS2414D.
I	HW Reset. Click this button to perform a hardware reset on the ADGS2414D. JP2 must be set to Position B.
J	Proceed to Memory Map. Click this button to access the ADGS2414D Memory Map view.

BLOCK DIAGRAM AND DESCRIPTION

DAISY-CHAIN MODE

It is possible to daisy-chain multiple ADGS2414D devices together. Daisy-chain mode enables the configuration of multiple devices with a minimal amount of digital lines. The route of digital signals and supplies through the ADGS2414D allows an increase in channel density when using the device in daisy-chain mode. Integrated passive components eliminate the need for external passive components.

Click Enter Daisy Chain Mode to open the Daisy Chain Mode view, as shown in Figure 4. Select the number of boards that are

connected in the daisy chain from the **Number of Devices in Daisy Chain** dropdown box. Select the checkboxes of the switches that are to be turned on. Click **Apply Changes** to write these values to the devices in the daisy chain. To exit daisy-chain mode, perform a hardware reset. To perform a hardware reset, click the **HW Reset** button in the **Daisy Chain Mode** view (JP2 must be set to Position B), or press the physical hardware reset button on the EV-ADGS2414DSDZ.

BLOCK DIAGRAM AND DESCRIPTION

MEMORY MAP

Registers

All registers are fully accessible from the ADGS2414D Memory Map view. To access the ADGS2414D Memory Map view, click Proceed to Memory Map. The ADGS2414D Memory Map view allows registers to be edited at a bit level (see Figure 5 and Figure 6). The shaded bits are read-only bits and cannot be accessed in ACE. All other bits are toggled. The bold bits or registers are modified values that have not been transferred to the evaluation board. Click **Apply Changes** to transfer the data to the EV-ADGS2414DSDZ.

All changes made in the **ADGS2414D Memory Map** view correspond to the block diagram. For example, if the internal register bit is enabled, the bit displays as enabled on the block diagram.

I²C refers to a communications protocol originally developed by Philips Semiconductors (now NXP Semiconductors).

ESD Caution

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
