

RJ11 MODULAR JACK CONNECTOR

OVERVIEW

RJ11 is the most commonly recognized registered jack, a standardized telecommunication network interface for connecting voice and data equipment to a telecommunications carrier and is found in homes and offices in most countries for single-line telephones.

This modular jack connector is wired for one analog telephone line, using the centre 2 contacts of 6 available positions (6P2C). It is available in right angle surface mount configuration.

RJ11 is specified with shields to protect against electromagnetic interference (EMI) and radio frequency signals.

FCI's RJ11 is designed to meet Category 3 (Cat 3) cable performance. Cat 3 cable features a 10Mb/s transfer rate and supports a transmission speed of 16MHz. It supports 10Mb/s transmission in accordance with the IEEE802.3u standard.
