Concept of operation

KTS/KTX Prime - setting the switching threshold (2-point teach-in)

Suitable for manual positioning of the object to be detected, e.g. marks and background.

1. Position mark

When setting the contrasts to be detected, "1st" flashes. Press set button.

When setting the contrasts to be detected, "2nd" flashes. Press set button. The Quality of Teach is displayed.

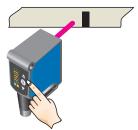

CONTRAST SENSORS

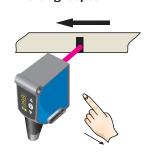

KTS/KTX Prime - Setting the switching threshold (teach-in dynamic)

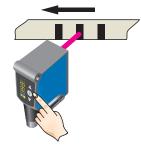

Suitable for teaching in moving objects.

1. Position background

2. Move at least the mark and background using the light spot

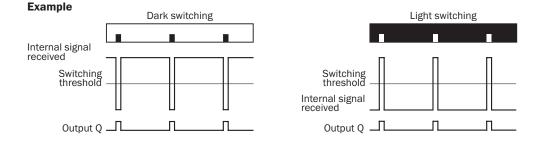

Press the Set pushbutton to start the teach-in process.

The display lights up during repeat length detection (---).

Press the Set pushbutton to end the teach-in process. The Quality of Teach is displayed.

Switching characteristics

The optimum emitted light is selected automatically (at RGB variants).

Static teach-in: light/dark setting is defined using teach-in sequence.

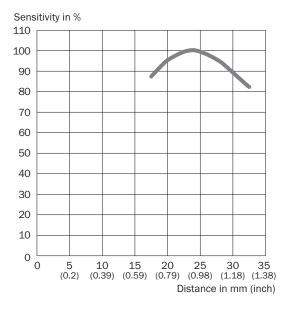

Dynamic teach-in: switching output active on mark, if background is longer in the field of view during the teach-in. The switching threshold is set in the center between the background and the mark.

Keylock (activation and deactivation): Press and hold the "+" pushbutton > 10 s.

The Q-LED (yellow) flashes and the "Err" error message appears on the display.

Sensing distance

Sensing distance 25 mm, light spot direction horizontal/vertical
