Heavy-Duty Type 4 Light Curtains
Simple installation

The S4B gives you more flexibility when deciding how to mount light curtains on your machine. Choose from either center-mount brackets or end cap brackets, both offering up to 15 degrees of freedom to align the emitter and receiver. Once the light curtains are mounted, alignment is further simplified with the onboard alignment zone Indicators as shown below.

Center mount brackets

End cap mounting brackets

Alignment Zone Indicators

**Misaligned**
Red indicates a loss of signal due to a blocked beam or significant misalignment

Weak
Yellow indicates a weak signal due to a slight misalignment

Aligned
Green indicates a strong signal, proper alignment, and clear of obstruction

Window is recessed 4 mm for added protection

End-to-end sensing design (no blind zone)

Predict and Prevent Downtime

Don't let a challenging environment with dust or dirt stop your machine from operating. The S4B detects when the beam strength is low and will send this signal via pin 5 on the connector to your PLC or HMI to notify maintenance teams that the lens needs to be cleaned.
Intuitive Setup and Swap-out

Select and save scan code setting without a PC for easy setup and swap-out

Reliable Finger Detection

The S4B is available with 14-millimeter resolution for reliable finger detection

Reliable Hand Detection

The S4B is available with 30-millimeter resolution for reliable hand detection

Cascading and Muting Options

Save Installation and Setup Time with Auto Cascading

Auto cascading in the S4B speeds setup and installation, automatically recognizing the next light curtain as it is connected. The minimal response time impact when cascaded allows the S4B to be installed closer to the equipment being guarded, making more efficient use of valuable floor space.

Simplify Installation and Maintenance with Specially Designed Cordsets

Cordsets determine if the light curtain is used as a standalone pair or as part of a cascade. Specific connection genders and color-coded cordsets simplify and error-proof installation, using yellow for connecting multiple light curtain sticks while black runs back to the controller. Up to four pairs can be connected, including pairs of different resolutions or lengths.

Cascading Four Pairs

Up to 50 ft. of cable between each curtain

S4BA-CASCADE-4
cable kit

Up to 30 m cable length to controller, depending on current load and devices

Cascading Three Pairs

Refine System Design and Installation with Muting Accessories

Muting allows objects to pass through operational light curtains by temporarily suspending their safety function, then resuming after the object has passed through the light curtain's beams. Mute arms protect sensors from damage and misalignment. Flexible mounting options for photoelectric sensors accommodate a wide range of object sizes passing through. The muting block consolidates wiring by combining the S4B light curtains and non-safety sensors into one block.
