PANEL-MOUNTING INFORMATION

The series H48M mounts easily into panels of minimum 0.020″ (0.5 mm) and maximum 0.177″ (4.5 mm) thickness. Front panel sealing to IP67 is achieved by a sealing o-ring fitted to the body of the switch before it is inserted into the panel hole cut-out. It is held onto the panel by means of a metal hex nut tightened down to a torque of 10 inch pounds to achieve the correct sealing pressure. The Basic Switch (16-4042) has to be installed after the pushbutton actuator is firmly secured to specified torque onto the panel.
