

High Accuracy RGBIR Sensor With I²C Interface

DESCRIPTION

VEML6046X00 is a high accuracy color digital 16-bit resolution sensor in a miniature opaque 2.67 mm x 2.45 mm package. It includes a high sensitive photodiodes, a low noise amplifier, a 16-bit A/D converter and supports an easy to use I²C bus communication interface and additional interrupt feature.

FEATURES

- Package type: surface-mount
- Dimensions (L x W x H in mm): 2.67 x 2.45 x 0.6
- AEC-Q100 qualified
- Integrated modules: RGBIR
- Supply voltage range V_{DD} : 2.5 V to 3.6 V
- Communication via I²C interface
- I²C bus H-level range: 1.7 V to 3.6 V
- Floor life: 4 weeks, MSL 2a, according to J-STD-020E
- Low shutdown by current consumption: typ. 0.5 μ A
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

APPLICATIONS

- RGBIR sensor in automotive for
 - Display backlight controls
 - Infotainment systems
 - Rear view mirror dimming
 - Interior lighting control systems
 - Head-up displays
 - Color recognition
 - CCT measurement
 - Mood lighting

PRODUCT SUMMARY

APPLICATION INFORMATION
1. Application Circuit

Fig. 9 - Application Circuit
(x) = Pin Number

Notes

- The interrupt pin is an open drain output. Proposed values for the pull-up resistors should be $> 1 \text{ k}\Omega$, e.g. $2.2 \text{ k}\Omega$ to $4.7 \text{ k}\Omega$ for the R1 and R2 (at SDA and SCL) and $10 \text{ k}\Omega$ to $100 \text{ k}\Omega$ for R3 (at interrupt).
- Normally just one decoupling capacitor is needed. This should be $\geq 100 \text{ nF}$ and placed close to the V_{DD} pin.
For detailed description about set-up and use of the interrupt as well as more application related information see AN: "Designing VEML6046X00 into an Application"

2. I²C Write and Read Protocol

The VEML6046X00 has 17 register addresses responsible for operation control, parameter setup and result buffering. All registers are accessible via I²C communication. Fig. 10 shows the basic I²C communication with VEML6046X00.

The built in I²C interface is compatible with I²C modes “standard” and “fast”: 10 kHz to 400 kHz.

Please refer to the I²C specification from NXP for details.

Fig. 10 - Send Byte / Receive Byte Protocol

REGISTER INFORMATION

Device Address

The VEML6046X00 is available in one preconfigured slave address. The predefined 7 bit I²C bus address is set to 0101001 = 0x29. The least significant bit (LSB) defines read or write mode. Accordingly the bus address is set to 0101 0010 = 0x52 for write and 0101 0011 = 0x53 for read.

TABLE 1 - SLAVE ADDRESS TABLE		
7 BIT SLAVE ADDRESS	8 BIT SLAVE ADDRESS	
0x29	0x52 (Write)	0x53 (Read)

Register Addresses

The VEML6046X00 has 17 registers, accessible through there respective 8-bit command codes.

Note that due to the location of the two shutdown bits (RGB_ON_0 and RGB_ON_1), one in register 0x00 and the other in 0x01, it is necessary to always write to both registers at once when configuring the device.

Auto-Memorization

The VEML6046X00 stores the last measured RGB and IR data before the device is shutdown, keeping the data accessible.

When VEML6046X00 is in shutdown mode, the host can freely read this data via read command directly.

When VEML6046X00 wakes up, the data will be refreshed once a new measurement is made.

TABLE 2 - COMMAND CODE AND REGISTER DESCRIPTION

COMMAND CODE	DATA BYTE LOW / HIGH	REGISTER NAME	DEFAULT VALUE	FUNCTION	ACCESS	
0x00	-	RGB_CONF_0	0x01	Set the integration time	Write and read	
				Measurement mode of the sensor		
				Enable interrupt function of the green channel		
				Switch the sensor on / off		
0x01	-	RGB_CONF_1	0x80	Switch the sensor on / off		
				GAIN and photodiode size setting		
				Interrupt persistence counter		
0x04	Low	G_THDH_L	0x00	Green channel high threshold window setting (low byte)		
0x05	High	G_THDH_H	0x00	Green channel high threshold window setting (high byte)		
0x06	Low	G_THDL_L	0x00	Green channel low threshold window setting (low byte)		
0x07	High	G_THDL_H	0x00	Green channel low threshold window setting (high byte)		
0x10	Low	R_DATA_L	0x00	Low byte of 16-bit red channel result data		Read only
0x11	High	R_DATA_H	0x00	High byte of 16-bit red channel result data		
0x12	Low	G_DATA_L	0x00	Low byte of 16-bit green channel result data		
0x13	High	G_DATA_H	0x00	High byte of 16-bit green channel result data		
0x14	Low	B_DATA_L	0x00	Low byte of 16-bit blue channel result data		
0x15	High	B_DATA_H	0x00	High byte of 16-bit blue channel result data		
0x16	Low	IR_DATA_L	0x00	Low byte of 16-bit IR channel result data		
0x17	High	IR_DATA_H	0x00	High byte of 16-bit IR channel result data		
0x18	Low	VEML6046X00_ID_L	0x01	ID code		
0x19	High	VEML6046X00_ID_H	0x00	ID code		
0x1A	Low	INT_FLAG	0x00	Reserved		
0x1B	High	INT_FLAG	0x00	Interrupt and active force mode event flag		

Notes

- Command code 0x00 default value is 0x01 = device is shutdown
- Command 0x00 and command 0x01 must be executed together, they cannot be executed independently

				0x0 (0b0)	Should be kept default		

CALCULATING THE LUX LEVEL

Command code 0x12 and 0x13 contain the results of the green channel measurement. The value of the green channel can be used to calculate the corresponding illumination. Therefore, the 16-bit code needs to be converted to a decimal value to determine the corresponding lux value. The calculation of the corresponding lux level is dependent on the programmed gain setting and the chosen integration time.

TABLE 13 - RESOLUTION AND MAXIMUM DETECTION RANGE AT RGB_PDDIV (2/2 PD USED)

25	0.1680	0.3360	0.5091	0.6720		11 010	22 020	33 363	44 040
12.5	0.3360	0.6720	1.0182	1.3440		22 020	44 040	66 727	88 079
6.25	0.6720	1.3440	2.0364	2.6880		44 040	88 079	133 453	176 158
3.125	1.3440	2.6880	4.0727	5.3760		(-) ⁽¹⁾	(-) ⁽¹⁾	(-) ⁽¹⁾	(-) ⁽¹⁾

Note

⁽¹⁾ For integration time of 3.125 ms the maximum count level is no longer 16 bit, so, half the integration time no longer leads to double the max. lux level

HANDLING INSTRUCTION

Special care must be taken into consideration when handling the VEML6046X00. VEML6046X00 is sensitive to dust and scratches, proper optical device handling procedures are recommended.

The optical surface of the device must be kept clean for optimal performance in both prototyping with the device and mass production manufacturing procedures. Tweezers with plastic or rubber contact surfaces are recommended to avoid scratches on the optical surface. Avoid manipulation with metal tools when possible. The optical surface must be kept clean of fingerprints, dust, and other optical-inhibiting contaminants. If the device optical surface requires cleaning, the use of isopropyl alcohol is recommended. A few gentle brushes with a soft swab are appropriate. Avoid potentially abrasive cleaning and manipulating tools and excessive force that can scratch the optical surface.

If the VEML6046X00 performs less than optimally, inspect the optical surface for dirt, scratches, or other optical artifacts. VEML6046X00 is a cost effective solution of RGB sensor with I2C bus interface. The standard serial digital interface is easy to access RGB and IR data without complex calculation and programming by external controller. Beside the digital output also a flexible programmable interrupt pin is available.

DRYPACK

Devices are packed in moisture barrier bags (MBB) to prevent the products from moisture absorption during transportation and storage. Each bag contains a desiccant.

FLOOR LIFE

Floor life (time between soldering and removing from MBB) must not exceed the time indicated on MBB label:

Floor life: 4 weeks

Conditions: $T_{amb} < 30\text{ }^{\circ}\text{C}$, RH < 60 %

Moisture sensitivity level 2a, according to J-STD-020E.

DRYING

In case of moisture absorption devices should be baked before soldering. Conditions see J-STD-020E or label. Devices taped on reel dry using recommended conditions 192 h at 40 °C (+ 5 °C), RH < 5 %.

REFLOW SOLDER PROFILE
