

54V, 140A DC/DC μ Module Regulator with PMBus Interface

FEATURES

- **High Efficiency at High Frequency**
 - Up to 93.8% Efficiency at 813kHz, 54V_{IN} to 3.3V_{OUT}
- **PMBus-Compliant I²C Serial Interface**
 - Monitor Voltage, Current, Temperature and Faults
 - Internal EEPROM Fault Log Record
 - Digitally Programmable Control Loop
 - Program Voltage, Current Limits, Soft-Start/Soft-Stop, Frequency Synchronization and Phasing, Power-Good, Warnings, and Faults
- **Wide Input Voltage Range: 45V to 65V**
- **Output Voltage Range: 0.5V to 3.6V**
- **Optimized for 45V to 65V_{IN} to 3.3V_{OUT}**
- **±0.5% Maximum DC Output Error with Differential Remote Voltage Sense**
- **±3% Current Readback Accuracy**
- Parallel and Current Share Multiple μ Module ICs
- 22mm × 24mm × 22mm Surface-Mounted Package

APPLICATIONS

- High Current Distributed Power Systems
- Servers, Network, and Storage Equipment
- Intelligent Energy Efficient Power Regulation

DESCRIPTION

The LTP[®]8802A-1B is a 140A step-down μ Module[®] (micromodule) regulator that provides microprocessor core voltage from a 54V power distribution architecture. It features remote configurability and telemetry monitoring of power management parameters over PMBus, an open standard I²C-based digital interface protocol.

The LTP8802A-1B is comprised of a programmable digital control system with precision mixed-signal circuitry, EEPROM, power MOSFETs, planar transformer, inductors, and supporting components. Its high level of integration minimizes component count and design time and maximizes flexibility and power density.

The LTP8802A-1B preserves high efficiency at high conversion ratios by utilizing a quasi-resonant architecture that reduces high voltage switching losses.

The LTP8802A-1B is available in a 22mm × 24mm × 22mm surface-mounted open frame package.

All registered trademarks and trademarks are the property of their respective owners.

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Note 2: The LTP8802A-1BI is guaranteed over the full 0°C to 125°C operating junction temperature range. Operating lifetime is derated at junction temperatures greater than 125°C .

Note 3: The LTP8802A-1BI includes overtemperature protection that is intended to protect the device during thermal overload conditions. Internal junction temperature may exceed 150°C if the overtemperature circuitry is active.

PIN FUNCTIONS

SMBALERT (Pin 1): Power-Good Output (Open-Drain). This pin is also used as the PMBus SMBALERT# signal. If unused, connect to GND.

ISHARE (Pin 2): Analog Current Sharing Input and Output. This pin must connect to other μ Module IC's ISHARE pins for current sharing. If not used, this pin should be left floating. Do not load ISHARE with external circuitry.

CTRL (Pin 3): Power Supply ON/OFF Input. This pin performs hardware on/off control. The factory default setting is to enable the LTP8802A-1B only when CTRL is logic-high (active-high), but can optionally be changed to active-low, or ignored, using register 0x02.

If this pin is not used, connect to 3V3 if it is configured active-high, or GND if it is configured active-low or ignored.

ADD (Pin 4): I²C/PMBus Address Select Input. Connect a resistor from ADD to GND. See the Applications Information section for more information about the PMBus address selection.

V_S⁺ (Pin 5): Non-Inverting Voltage Sense Input. This pin functions as the Kelvin sense of V_{OUT} at the load as well as the feedback point for the converter control loop. The V_S⁺ pin should be tied to a precision feedback resistor divider connected to the output voltage. The V_S⁺ pin requires 100pF capacitance to the V_S⁻ pin placed close to the LTP8802A-1B. The V_S⁺ feedback resistors need to have an equivalent parallel resistance < 2k. Otherwise, the control loop may be adversely affected.

V_S⁻ (Pin 6): Inverting Voltage Sense Input. This pin functions as the Kelvin sense of GND at the load as well as the GND connection for the feedback point for the converter control loop.

SYNC (Pin 7): Synchronization Input Signal. This pin is used as a reference for the internal oscillator and is referenced to GND. Synchronization is disabled by default.

To enable synchronization, set 0xFE55[6] = 0 and then set 0xFE00 = 0b0100000 for the value to take effect.

It is recommended that this input be disabled when not in use. To disable, set 0xFE55[6] = 1 and then set 0xFE00 = 0b0100000 for the value to take effect.

To accomplish phase interleaving of multiple devices, a phase delay in steps of 22.5 degrees can be added using register 0x37[3:0].

3V3 (Pin 8): The 3V3 pin powers internal μ Module circuitry. The typical 3V3 supply current when operating is 60mA. The voltage on this pin must be within the specified operating range before the LTP8802A-1B can be enabled.

GND (Pins 9, 14, 15, 19): μ Module Ground. The GND pins carry high current and must be connected to large planes with sufficient internal layers. Be sure to keep the voltage at the pins roughly equal by taking care of the direction of current flow and debiasing of the ground planes.

7V0 (Pin 10): The 7V0 pin powers internal μ Module circuitry, including gate drivers. The typical 7V0 supply current when operating is 0.39A. The voltage on this pin must be within the specified operating range before the LTP8802A-1B can be enabled.

V_{OUT} (Pins 11, 12, 13, 16, 17, 18): The V_{OUT} pins carry the high output current of the converter. As such, these pins must be connected to large power planes with sufficient internal layers. The PCB layout must be such that the two sets of V_{OUT} pins see roughly the same voltage. This ensures high efficiency and balanced currents. Output voltage is digitally programmable from 0.5V to 3.6V. The V_{OUT} pins are two rows of terminals and carry high steady-state output currents (from 0A up to 140A) and transient currents up to 180A.

SCL (Pin 20): I²C/PMBus Serial Clock Input and Output (Open-Drain).

SDA (Pin 21): I²C/PMBus Serial Data Input and Output (Open-Drain).

V_{IN} (Pin 22): The V_{IN} pin supplies current to the primary power switches and operates from 54V/48V nominal inputs; for further details, see Absolute Maximum Ratings and Electrical Characteristics table for input voltage range. The LTP8802-1B requires, at minimum, a total of 10 μ F from low ESR ceramic bypass capacitors, located as close as possible to the V_{IN} and GND pins. Two 4.7 μ F 1206/1210 X7* capacitors are recommended.

APPLICATIONS INFORMATION

COMPENSATION

The LTP8802A-1B offers programmable loop compensation to optimize the transient response without any hardware change. A Type 3 filter architecture has been implemented. To tailor the loop response to the specific application, the low frequency gain, zero location, pole location and high frequency gain can all be set individually. From the sensed voltage to the duty cycle, the transfer function of the filter in z-domain is resolved by Equation 1.

$$H(z) = \left(\frac{D}{LFG} \cdot \frac{1}{(1-z^{-1})} + \frac{C}{HFG} \left(\frac{1 - \frac{B}{256}z^{-1}}{1 - \frac{A}{256}z^{-1}} \right) \right) \quad (1)$$

Where:

- A = filter pole register value (in decimal), 0xFE03.
- B = filter zero register value (in decimal), 0xFE02.
- C = high frequency gain register value (in decimal), 0xFE04.
- D = low frequency gain register value (in decimal), 0xFE01.
- LFG = $4.7744 \times 10^7 / f_{SW}$.
- HFG = $2.984 \times 10^6 / f_{SW}$.

As shown in Figure 1, adjusting low frequency gain register value changes the gain of the compensation over the low frequency range without moving the pole and zero locations. Adjusting high frequency gain register value changes the gain of the compensation over the high frequency range without moving the pole and zero locations. As shown in Figure 2, adjusting the pole and zero register values moves the double poles and double zeroes of the compensation. Increasing the filter zero and pole register values separates the double zeroes and double poles. It is recommended that **LTpowerPlay®** be used to program the filter.

It is recommended that the user determines the appropriate value for the compensation registers using the **LTpowerCAD®** tool. An example of the bode plot of the typical application circuit with the recommended compensation settings is shown in Figure 3. Measured

bode plot of the LTP8802A-1B in circuit Figure 9 with register setting (in decimal): 0xFE02 = 226, 0xFE03 = 180, 0xFE04 = 70, 0xFE01 = 8; crossover frequency: 22.0kHz, phase margin 101.7deg, gain margin 14.7dB.

APPLICATIONS INFORMATION

Table 1. LTP8802A-1B Summary of Customizable Commands and Features

PMBus COMMAND NAME OR FEATURE	CMD CODE REGISTER	COMMAND OR FEATURE DESCRIPTION	TYPE	DATA UNITS	DATA FORMAT	NVM ATTRIBUTES
WRITE_PROTECT	0x10	Protect the PMBus device against accidental writes.	R/W Byte	NA	Bit Field	Stored in user-editable NVM.
VIN_ON	0x35	Sets the value of the input voltage (V_{RMS}) at which the device starts power conversion.	R/W Word	Volts	Linear 11	Stored in user-editable NVM.
VIN_OFF	0x36	Sets the value of the input voltage (V_{RMS}) at which the device stops power conversion.	R/W word	Volts	Linear 11	Stored in user-editable NVM.
VIN_OV_FAULT_LIMIT	0x55	Sets the upper voltage threshold (in volts) measured at the sense/input pin that causes an overvoltage fault condition.	R/W Word	Volts	Linear 11	Stored in user-editable NVM.
VIN_UV_FAULT_LIMIT	0x59	Sets the lower voltage threshold (in volts) measured at the sense/input pin that causes an undervoltage fault condition.	R/W Word	Volts	Linear 11	Stored in user-editable NVM.
IIN_OC_FAULT_LIMIT	0x5B	Sets the threshold value (in amperes) measured at the sense/input pin that causes an overcurrent fault condition.	R/W Word	Amps	Linear 11	Stored in user-editable NVM.
POUT_OP_FAULT_LIMIT	0x68	Sets the upper power threshold (in watts) measured at the sense/output pin that causes an output overpower fault condition.	R/W Word	Watts	Linear 11	Stored in user-editable NVM.
NM_DIGFILT_LF_GAIN_SETTING	0xFE01	Determines the low frequency gain of the loop response in normal mode.	R/W Byte	NA	NA	Stored in user-editable NVM.
NM_DIGFILT_ZERO_SETTING	0xFE02	Determines the position of the final zero in normal mode.	R/W Byte	NA	NA	Stored in user-editable NVM.
NM_DIGFILT_POLE_SETTING	0xFE03	Determines the position of the final pole in normal mode.	R/W Byte	NA	NA	Stored in user-editable NVM.
NM_DIGFILT_HF_GAIN_SETTING	0xFE04	Determines the high frequency gain of the loop response in normal mode.	R/W Byte	NA	NA	Stored in user-editable NVM.

APPLICATIONS INFORMATION

LTpowerPlay: AN INTERACTIVE GUI FOR DIGITAL POWER MODULES

The LTpowerPlay is a powerful graphical user interface (GUI) that supports the digital power module LTP8802A-1B, as shown in Figure 5. In online mode, LTpowerPlay can be used to evaluate single or multiple LTP8802A-1B power modules of different types by connecting to a demo board or the user application. In offline mode with no hardware connected via PMBus, LTpowerPlay can also be used to build the project file with configuration of multiple modules, and the project file can

be saved and reloaded later. Moreover, during board bring-up, LTpowerPlay can be used as a valuable diagnostic tool to program the power system, to tweak the system settings, or to diagnose system issues.

The LTpowerPlay utilizes Analog Device's USB-to-I²C/SMBus/PMBus Controller, [DC1613A](#), to communicate with circuit boards including the [DC3190B-F](#) (single LTP8802A-1B module) demo board or a customer target system. Further context information, including tutorial demos, is available [here](#).

The screenshot displays the LTpowerPlay software interface. The main configuration pane is titled 'Config: U0 (7h40) -LTP8800_1'. It features several tabs: Setup, All, Addressing/VP, On/Off/Margin, PWM Configuration, Digital Filter, Voltage, and Current. The 'Voltage' tab is active, showing various configuration parameters:

- On/Off Control and Margining:** Includes ON_OFF_CONFIG (0x1F) with options for controlled_on, use_pmbus, u..., and OPERATION (0x00 Immediateoff, 0x40 Softoff, 0x80 On/Nominal Voltage).
- PMB Related Configuration:** Includes MFR_DEEP_LLM_DISABLE_SETTING (0x81), MFR_DOUBLE_UPD_RATE (0xE6), MFR_SR_SETTING (0x30), and MFR_SYNC_LTP8SX (0x03).
- Input Voltage:** Includes VIN_OV_FAULT_LIMIT (65.0000 V), VIN_UV_FAULT_LIMIT (3.2500 V), VIN_ON (40.0000 V), and VIN_OFF (38.0000 V).
- Fault Responses -- Input Voltage:** Includes VIN_UV_FAULT_RESPONSE_GLOBAL (0x3A) and VIN_OV_FAULT_RESPONSE_GLOBAL (0XB0).
- Output Voltage:** Includes VOUT_OV_FAULT_LIMIT (+60.0 % above/below VOUT), VOUT_OV_WARN_LIMIT (+46.7 % above/below VOUT), VOUT_COMMAND (0.7500 V), VOUT_UV_WARN_LIMIT (-46.6 % above/below VOUT), VOUT_UV_FAULT_LIMIT (-71.1 % above/below VOUT), POWER_GOOD_ON (-100.0 % above/below VOUT), and POWER_GOOD_OFF (-100.0 % above/below VOUT).
- Output Voltage -- Miscellaneous:** Includes VOUT_MAX (1.1000 V), VOUT_MODE (0x12) Linear, 1sb_size = 2^(-14), VOUT_SCALE_LOOP (0.66), VOUT_TRANSITION_RATE (0.100 V/ms).
- Fault Responses -- Output Voltage:** Includes MFR_VOUT_OV_FAST_SETTING (0x80), TON_MAX_FAULT_RESPONSE (0x38), VOUT_UV_FAULT_RESPONSE (0x3A), VOUT_OV_FAULT_RESPONSE (0XB9), and MFR_VOUT_OV_FAST_FAULT_RESPONSE (0XB9).
- Fault Responses -- Output Power:** Includes POUT_OP_FAULT_RESPONSE (0x39).
- Input Current:** Includes IIN_OC_FAULT_LIMIT (49.3750 A).
- Output Current:** Includes MFR_DELAY_TIME_UNIT (0x55) curr: x256 ms, V/other: x256 ms, IOUT_OC_FAULT_LIMIT (210.000 A), and IOUT_OC_WARN_LIMIT (160.000 A).

The right pane shows 'Reg Info' for the VOUT_COMMAND register. It includes a description: 'Nominal DC/DC converter output voltage setpoint.' and register information: Command Code: 0x21, Data Type: Unsigned Linear 16, Scope: Paged. Value Analysis shows GUI Value (hex): 0x3000 and GUI Value (meaning): 0.75V. Example Write and Read Sequences are provided for the register.

Figure 5. LTpowerPlay Main Interface

APPLICATIONS INFORMATION

PMBus COMMUNICATION AND COMMAND PROCESSING

The LTP8802A-1B series communicate through PMBus with other compliant devices. The LTP8802A-1B is always configured as a subordinate device in the overall system, requiring a two-wire interface with one data pin (SDA) and one clock pin (SCL). As subordinate devices, LTP8802A-1B power modules decode the command sent from the main device and respond accordingly. Data transfer of the PMBus subordinate is based on PMBus commands. According to the PMBus/SMBus/I²C communication protocol, all PMBus commands start with a subordinate address with the R/W bit cleared (set to 0), followed by the command code, with mostly the stop bit as the last bit in a complete data transfer.

Commands can be categorized as send, read, or write types. For read or write commands, data is transferred between devices in a byte wide format. For send commands, the subordinate device execute the commands upon receiving the stop bit. To ensure robust communication, the main and subordinate devices send acknowledge (ACK) or no acknowledge (NACK) bits as a method of handshaking, eliminating the busy errors between devices.

Manufacturer-specific extended commands are also supported by LTP8802A-1B. These commands follow the same protocol as the standard PMBus commands. However, the command code consists of two bytes: Command code extension (0xFE) and Extended command

code (0x00 to 0xFF). By use of the manufacturer-specific extended commands, the PMBus command set is greatly extended.

PMBus ADDRESS SELECTION

The PMBus address is set by connecting an external resistor from the ADD pin to GND. Table 2 lists the recommended resistor values and associated PMBus addresses.

Table 2. Recommended Resistor Values and Associated PMBus Addresses

PMBus ADDRESS	1% RESISTOR ON ADD PIN (Ω)
0x40	210 (or Connect to GND)
0x41	750
0x42	1330
0x43	2050
0x44	2670
0x45	3570
0x46	4420
0x47	5360
0x48	6340
0x49	7320
0x4A	8450
0x4B	9530
0x4C	10,700
0x4D	12,100
0x4E	13,700
0x4F	15,000 (or Connect to 3V3)

PACKAGE DESCRIPTION

22-Terminal Printed Circuit Assembly [PCA] 22mm x 24mm x 22mm (PC-22-1)

- NOTES:
1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M-1994
 2. ALL DIMENSIONS ARE IN MILLIMETERS
 3. PRIMARY DATUM - Z IS SEATING PLANE
 4. DETAILS OF PIN 1 IDENTIFIER ARE OPTIONAL BUT MUST BE LOCATED WITHIN THE ZONE INDICATED. THE PIN 1 IDENTIFIER MAY BE EITHER A MOLD OR MARKED FEATURE
 5. PACKAGE PIN LABELING MAY VARY AMONG PRODUCTS. REVIEW EACH PACKAGE LAYOUT CAREFULLY

DIMENSIONS				
SYMBOL	MIN	NOM	MAX	NOTES
D		24.00		
E		22.00		
H	21.50	22.00	22.50	
H1	1.70	1.90	2.10	
H2	1.73	1.88	2.03	PCB THK
e1		2.00		
e2		3.65		
aaa			0.20	
bbb			0.40	
ccc			0.20	
ddd			0.35	
TOTAL NUMBER OF INTERCONNECTS: 22

µModule Design and Manufacturing Resources	<p>Design:</p> <ul style="list-style-type: none"> • Selector Guides • Demo Boards and Gerber Files • Free Simulation Tools <p>Manufacturing:</p> <ul style="list-style-type: none"> • Quick Start Guide • PCB Design, Assembly and Manufacturing Guidelines • Package and Board Level Reliability
µModule Regulator Products Search	<ol style="list-style-type: none"> 1. Sort table of products by parameters and download the result as a spread sheet. 2. Search using the Quick Power Search parametric table. 
Digital Power System Management	Analog Devices' family of digital power supply management ICs are highly integrated solutions that offer essential functions, including power supply monitoring, supervision, margining and sequencing, and feature EEPROM for storing user configurations and fault logging.

RELATED PARTS

PART NUMBER	DESCRIPTION	COMMENTS
LTP8800-1A	54V _{IN} , 150A Module Regulator with Digital Power System Management, Optimized for 0.8V _{OUT}	45V ≤ V _{IN} ≤ 65V, 0.5V ≤ V _{OUT} ≤ 1.1V, PMBus with Control and Telemetry, ±0.5% of Maximum DC Output Error, 22mm × 24mm × 6.7mm Surface-Mount Package
LTP8800-4A	54V _{IN} , 200A Module Regulator with Digital Power System Management, Optimized for 0.8V _{OUT}	45V ≤ V _{IN} ≤ 65V, 0.5V ≤ V _{OUT} ≤ 1.1V, PMBus with Control and Telemetry, ±0.5% of Maximum DC Output Error, 22mm × 24mm × 22mm Surface-Mount Package
LTP8803-1A	54V _{IN} , 160A Module Regulator with Digital Power System Management, Optimized for 1.2V _{OUT}	45V ≤ V _{IN} ≤ 65V, 0.5V ≤ V _{OUT} ≤ 1.5V, PMBus with Control and Telemetry, ±0.5% of Maximum DC Output Error, 22mm × 24mm × 22mm Surface-Mount Package
LTM[®]4664A	54V _{IN} , Dual 30A or Single 60A µModule Regulator with Digital Power System Management	30V ≤ V _{IN} ≤ 58V, 0.5V ≤ V _{OUT} ≤ 1.2V, PMBus with Control and Telemetry, ±0.5% of Maximum DC Output Error, 16mm × 16mm × 7.72mm BGA Package
LTM4700	Dual 50A or Single 100A µModule Regulator with Digital Power System Management	4.5V ≤ V _{IN} ≤ 16V, 0.5V ≤ V _{OUT} ≤ 1.8V, PMBus with Control and Telemetry, ±0.5% of Maximum DC Output Error, 15mm × 22mm × 7.87mm BGA Package
LTM4681	Quad 31.25A or Single 125A µModule Regulator with Digital Power System Management	4.5V ≤ V _{IN} ≤ 16V, 0.5V ≤ V _{OUT} ≤ 3.3V, PMBus with Control and Telemetry, ±0.5% of Maximum DC Output Error, 15mm × 22mm × 8.17mm BGA Package
LTM4660	60V, 300W Nonisolated µModule Bus Converter	30V ≤ V _{IN} ≤ 60V, 7.5V ≤ V _{OUT} ≤ 18V, Up to 300W, 16mm × 16mm × 10.34 BGA Package
