

# AEPD-D0F2-00000

## SMT PIN Photodiode

### Overview

The Broadcom<sup>®</sup> AEPD series is a silicon PIN photodiode with a unique package design that enables it to be surface mountable while producing a narrow angle of sensitivity unlike any other. The primary optic focuses light into the photodiode die, resulting in higher light sensitivity and cutting off stray lights from the side.

This product can be operated under a wide range of environmental conditions, making it ideal for various industrial and consumer applications.

### Features

- Silicon PIN photodiode
- Surface-mountable package
- Angle of sensitivity:  $\pm 19^\circ$
- Black epoxy package with sensitivity of  $>800$  nm
- Suitable for outdoor application
- IR emitter in similar package: AERD-N4xx

### Applications

- Industrial automation
- White goods

#### CAUTION!

This product is ESD sensitive. Observe appropriate precautions during handling and processing. Refer to application note AN-1142 for additional details.

The product must be kept in a moisture barrier bag with  $<5\%$  relative humidity (RH) when not in use because prolonged exposure to the environment might cause the leads to tarnish or rust, which might cause difficulties in soldering.

Figure 1: Package Drawing

Lead Configuration	
Pin 1	Cathode
Pin 2	Anode
Pin 3	Cathode

**NOTE:**

1. All dimensions in millimeters (mm).
2. Tolerance is  $\pm 0.50$  mm unless otherwise specified.

## Device Selection Guide ( $T_J = 25^\circ\text{C}$ )

Part Number	Reverse Light Current, $I_{ra}$ ( $\mu\text{A}$ )			Test Conditions
	Min.	Typ.	Max.	
AEPD-D0F2-00000	—	70	—	$E_e = 1 \text{ mW/cm}^2$ , $\lambda = 940 \text{ nm}$ , $V_R = 5\text{V}$

## Absolute Maximum Ratings

Parameter	Rating	Unit
Reverse Voltage, $V_R$	30	V
Power Dissipation, $P_D$	150	mW
Operating Temperature Range	-40 to +85	$^\circ\text{C}$
Storage Temperature Range	-40 to +100	$^\circ\text{C}$

## Optical and Electrical Characteristics ( $T_J = 25^\circ\text{C}$ )

Parameter	Symbol	Min.	Typ.	Max.	Unit	Test Conditions
Wavelength of Peak Sensitivity	$\lambda_{S \text{ max}}$	—	960	—	nm	
Spectral Range of Sensitivity	$\lambda_{0.1}$	—	800 to 1100	—	nm	
Angle of Sensitivity	$\varphi$	—	$\pm 19$	—	$^\circ$	
Reverse Dark Current	$I_{ro}$	—	—	10	nA	$V_R = 10\text{V}$ , $E_e = 0 \text{ mW/cm}^2$
Open Circuit Voltage	$V_{OC}$	—	400	—	mV	$E_e = 1 \text{ mW/cm}^2$ , $\lambda = 940 \text{ nm}$
Short Circuit Current	$I_{SC}$	—	58	—	$\mu\text{A}$	$E_e = 1 \text{ mW/cm}^2$ , $\lambda = 940 \text{ nm}$
Temperature Coefficient of $V_{OC}$	$TC_{VOC}$	—	-2.690	—	$\text{mV}/^\circ\text{C}$	$E_e = 1 \text{ mW/cm}^2$ , $\lambda = 940 \text{ nm}$
Temperature Coefficient of $I_{SC}$	$TC_{ISC}$	—	-0.516	—	$\%/^\circ\text{C}$	$E_e = 1 \text{ mW/cm}^2$ , $\lambda = 940 \text{ nm}$
Forward Voltage	$V_F$	—	1.00	—	V	$I_F = 10 \text{ mA}$
Diode Capacitance	$C_O$	—	15	—	pF	$V_R = 0\text{V}$ , $E_e = 0 \text{ mW/cm}^2$ , $f = 1 \text{ MHz}$

**NOTE:**

1. All dimensions are in millimeters (mm).
2. Recommended stencil thickness = minimum 0.15 mm (6 mil).

# Precautionary Notes

## Soldering

- Do not perform reflow soldering more than twice. Observe necessary precautions of handling moisture-sensitive devices as stated in the following section.
- Do not apply any pressure or force on the package during reflow and after reflow when the package is still hot.
- Use reflow soldering to solder the package. Use hand soldering only for rework if unavoidable, but it must be strictly controlled to following conditions:
  - Soldering iron tip temperature = 315°C maximum
  - Soldering duration = 3 seconds maximum
  - Number of cycles = 1 only
  - Power of soldering iron = 50W maximum
- Do not touch the package body with the soldering iron except for the soldering terminals, as it may cause damage to the package.
- Confirm beforehand whether the functionality and performance of the package is affected by soldering with hand soldering.

Figure 10: Recommended Lead-Free Reflow Soldering Profile

## Handling Precautions

For automated pick-and-place, Broadcom has tested the following nozzle size to work with this package. However, due to the possibility of variations in other parameters, such as pick-and-place machine maker/model, and other settings of the machine, verify that the selected nozzle performs as per requirements.

Figure 11: Recommended Nozzle Dimension

## Handling of Moisture-Sensitive Devices

This product has a Moisture Sensitive Level 3 rating per JEDEC J-STD-020. Refer to the Broadcom Application Note AN5305, *Handling of Moisture Sensitive Surface Mount Devices*, for additional details and a review of proper handling procedures.

### Before use:

- An unopened moisture barrier bag (MBB) can be stored at <math>40^{\circ}\text{C}/90\% \text{ RH}</math> for 12 months. If the actual shelf life has exceeded 12 months and the humidity indicator card (HIC) indicates that baking is not required, then it is safe to reflow the packages per the original MSL rating.
- Do not open the MBB prior to assembly (for example, for IQC). If unavoidable, MBB must be properly resealed with fresh desiccant and HIC. The exposed duration must be taken in as floor life.

### Control after opening the MBB:

- Read the HIC immediately upon opening of MBB.
- Keep the packages at <math>30^{\circ}/60\% \text{ RH}</math> at all times, and complete all high temperature-related processes, including soldering, curing or rework within 168 hours.

### Control for unfinished reel:

Store unused products in a sealed MBB with desiccant or a desiccator at <math>5\% \text{ RH}</math>.

### Control of assembled boards:

If the PCB soldered with the products is to be subjected to other high-temperature processes, store the PCB in a sealed MBB with desiccant or desiccator at <math>5\% \text{ RH}</math> to ensure that all packages have not exceeded their floor life of 168 hours.

### Baking is required if the following conditions exist:

- The HIC indicator indicates a change in color for 10% and 5%, as stated on the HIC.
- The products are exposed to conditions of <math>30^{\circ}\text{C}/60\% \text{ RH}</math> at any time.
- The product's floor life exceeded 168 hours.

The recommended baking condition is <math>60^{\circ}\text{C} \pm 5^{\circ}\text{C}</math> for 20 hours.

Baking can only be done once.

### Storage:

The soldering terminals of the product are silver plated. If the products are exposed in ambient environment for too long, the silver plating might be oxidized, thus affecting its solderability performance. Therefore, keep unused products in a sealed MBB with desiccant or in a desiccator at <math>5\% \text{ RH}</math>.

## Application Precautions

If the product is intended to be used in a harsh or outdoor environment, protect the products against damages caused by rain water, water, dust, oil, corrosive gases, external mechanical stresses, and so on.
