Our range of VoIP phones (Voice Over Internet Protocol) allow users to communicate with others using VoIP programs like Skype, MSN Messenger & Yahoo Messenger just to name a few, to make PC to PC, or PC to landline (if supported by VoIP telephony program) Phone calls

The VoIP Phones connect to a computer via USB Connection and provide USB Audio functions.

The **VoIP-001** provides driverless operation and ease of use in one user friendly package, it allows independent audio connection so your call will not be interrupted by audio warnings/alerts or music

Features
-PC-to-PC and PC-to-phone operation
-Driverless Operation under Windows 2000 / XP
-Compliant with USB1.1 Specification
-No need sound card
-No external power required
-Independent audio use, once set up you can listen to music whilst making a VoIP call
-Echo cancellation, noise reduction
-Full duplex communication

Specification
-Microsoft Windows 2000/XP Compatible, Absolute Driver Free
-Free PC to PC call and low PC to Phone call rate over the internet
-No Power/Memory/Sound Card/Audio require, all media application can work simultaneous
-Plug & Dial – Easy to install- easy to use
-100% compatible with popular "Skype" software
-Dimension:125 x 54 x 28mm
-Weight: 120g
-Cable Length: 180cm

The **VoIP-005** is more advanced and has more features than the VoIP-001, it is supplied with a LCD screen that shows call information, identifies which of your contacts are online and available (with Skype operation only), controls your voice, ring and key tone volume, has 21 built in ring tones, allows you to make and receive phone calls even if your monitor is turned off, displays call time and it also tells the time as well! As with the VoIP-001, the audio is independent from the computer and allows you to listen to music or even play a game whilst making a call.

Features
