Description

These N-channel MOSFETs from International Rectifier utilize advanced processing techniques to achieve the extremely low on-resistance per silicon area. This benefit provides the designer with an extremely efficient device for use in battery and load management applications.

This Dual TSOP-6 package is ideal for applications where printed circuit board space is at a premium and where maximum functionality is required. With two die per package, the IRF5852 can provide the functionality of two SOT-23 packages in a smaller footprint. Its unique thermal design and R_{DS(on)} reduction enables an increase in current-handling capability.
