Nidec Components Corporation  
Sensor Division

Dear Valued Customers

### Product process change notification for liquid leak sensor WL10 series

This is to inform you that the product process will be changed for liquid leak sensor, WL10 series. This notification is for your company to take appropriate action should your internal documentation for the products need to be updated.

#### 1. Type of change

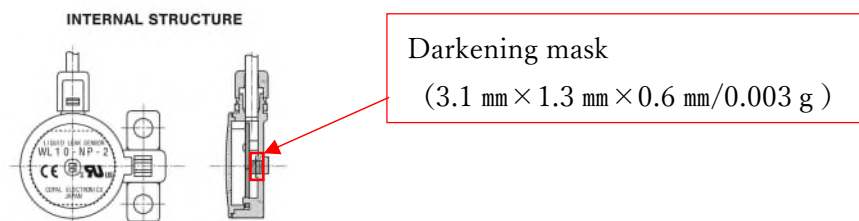

Man  Method  Material  Machine

#### 2. Products affected

Product name	Series name
Liquid Leak Sensor	WL10 series

#### 3. Description of change

The film of the production tooling used to cut parts of the darkening mask will be changed from non-RoHS compliant to RoHS compliant.

##### 【Production process of Mask】

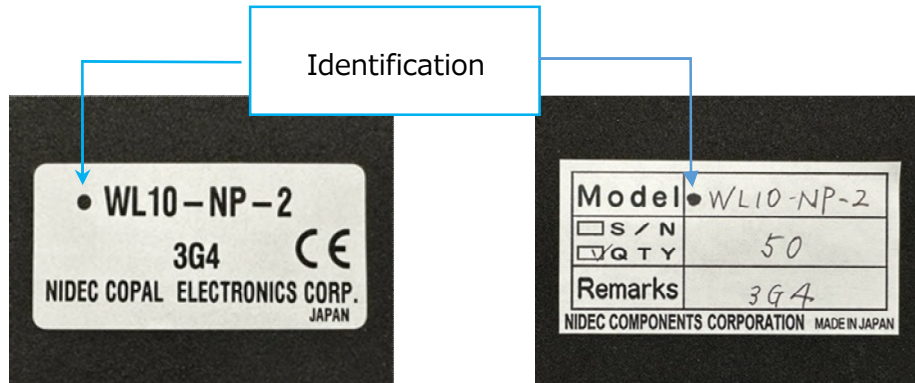

- i . Production of material sheet for mask
- ii . Placing the sheet on the film in order to avoid the cut sheet being spread over  
Changing the type of film from non-conforming to RoHS conforming
- iii . Cutting
- iv . Picking up mask from the sheet

#### 4. Reason for change

The film used as tooling turned out to be RoHS non-conforming. In order to be in compliance with RoHS directive, NCCC decides to change the film to RoHS conforming. Since the film is not a part of product and is used just as tooling, changing the type of film doesn't affect the quality and performance of WL-10 by any means.

### 5. Implementation date

The estimated implementation date is from the next delivery (Lot No.3G4 or later). Production will resume on July 21st. As shown in the photo below, countermeasure products will be marked on the label.
