Subject: Product Change Notification for 9007 Reed Relay Series – Color Change

This announcement is a formal notification informing you that our 9007 reed relay series, which was previously manufactured in black compound, will now also be manufactured in red compound; this red compound color is the same “Coto” red compound that is used in our extensive line of standard molded reed relays. As a result, you may receive either of the two colors moving forward. This manufacturing decision – which allows us to take advantage of material availability – aligns with our ongoing efforts to maintain efficiency and remain cost competitive in this product series.

Since the color is not specified in the datasheet for the 9007 series, there will be no revision to that documentation. We assure you that there will be no changes to fit, form, function, quality, or performance, and no changes to internal components or manufacturing processes. Additionally, in order to ensure product consistency, we will use the same, single color for each production date code.

The change is effective from date code 2427.

We greatly appreciate your continued partnership and trust in our products and services.

Sincerely,

David Armenta

Product Manager
