MDOB128032IV-WS	128 × 32	OLED Module

Specification

Version: 1	Date: 29/12/2024

Revision

1	27/12/2024	First Issue

Display Features	
Resolution	128 × 32
Appearance	White
Supply Voltage	3.0V
Interface	SPI
Module Size	59.0 × 18.86 × 5.96^{MAX}mm
Operating Temperature	-40°C ~ +80°C
Construction	COB

RoHS compliant

Created By	Checked By
CL	WE
Box Quantity	Weight / Display
---	---

* - For full design functionality, please use this specification in conjunction with the SSD1315 display driver specification. (Provided Separately)

Display Accessories

Part Number	Description
MDIB-CC1	Interconnect board for standard pitch pinouts to fine pitch wires. Providing pinouts for 2.54 pinout. 1.27, 1, 0.845, 0.8, 0.7, 0.65, 0.62, 0.6, 0.5 & 0.3 pads.
MCIB-12	Board to connect UC32 or other micros to I2C, SPI and 4/8bit displays. Has a backlight driver

Optional Variants

Appearance	Voltage

1.General Specification

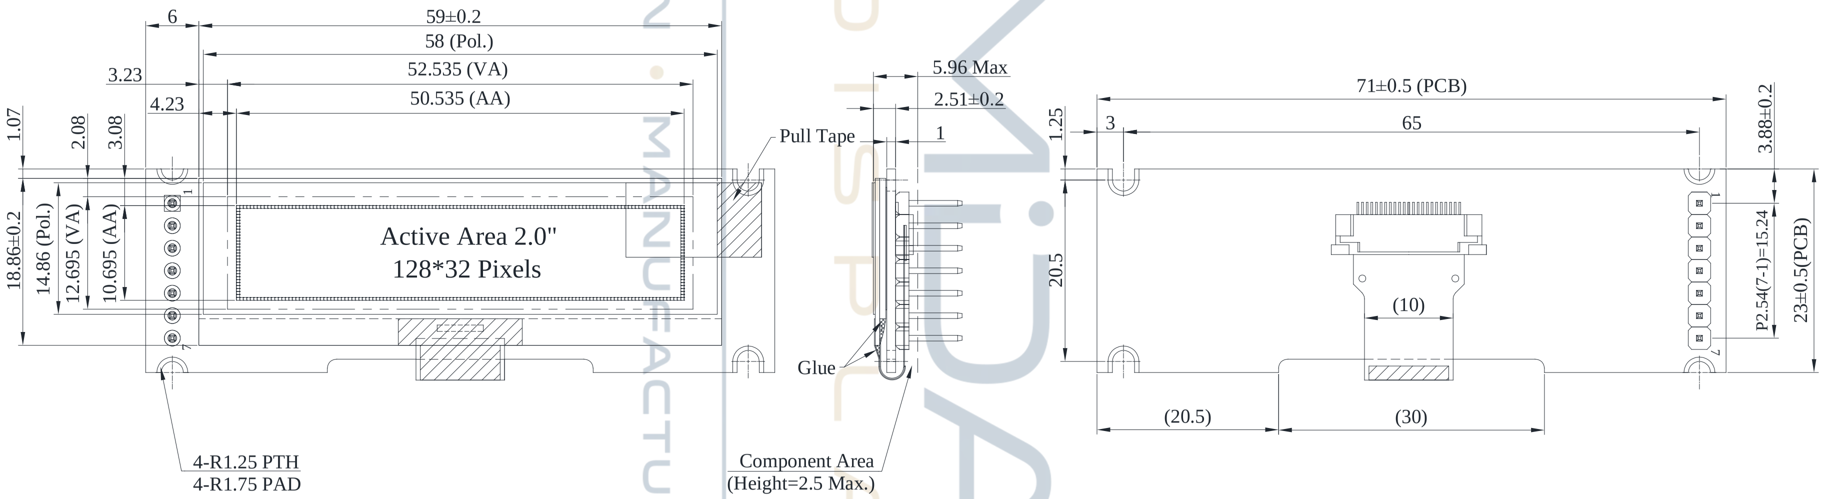
The Features is described as follow:

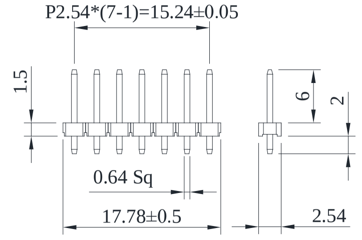
- Module dimension: 59.0 × 18.86 × 5.96Max mm
- Active area: 50.535 ×10.695 mm
- Dot Matrix: 128 × 32
- Dot size: 0.370 × 0.310 mm
- Dot pitch: 0.395 × 0.335 mm
- Display Mode：Passive Matrix
- Duty: 1/32 Duty
- Display Color: White
- IC: SSD1315
- Interface: 4-Wire SPI
- Size: 2.0 inch

3.Interface Pin Function

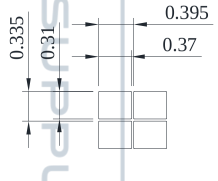
No.	Symbol	Function
1	GND	Ground.
2	VCC	Power supply pin for core logic operation.
3	D0	The serial clock input
4	D1	The serial data input
5	RES#	This pin is reset signal input. When the pin is pulled LOW, initialization of the chip is executed. Keep this pin HIGH (i.e. connect to VDD) during normal operation.
6	D/C#	This pin is Data/Command control pin connecting to the MCU. When the pin is pulled HIGH, the data at D1 will be interpreted as data. When the pin is pulled LOW, the data at D1 will be transferred to a command register. In I2C mode, this pin acts as SA0 for slave address selection.
7	CS#	This pin is the chip select input connecting to the MCU. The chip is enabled for MCU communication only when CS# is pulled LOW (active LOW).

4.Contour Drawing & Block Diagram

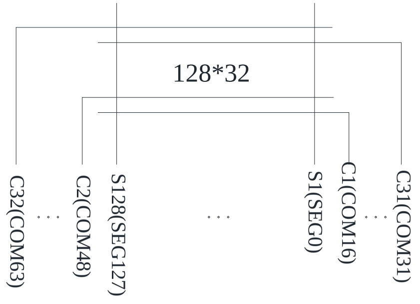




Pin Detail
Scale 1/1



DOTS SIZE
SCALE 10/1

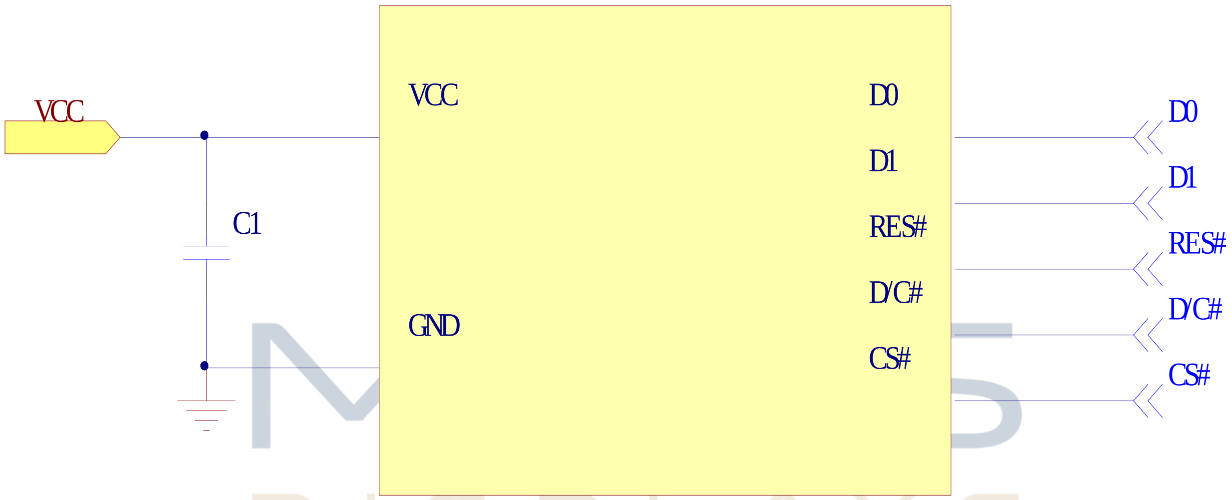


Seg&Com Layout

PIN	SYMBOL
1	GND
2	VCC
3	D0
4	D1
5	RES#
6	D/C#
7	CS#

The non-specified tolerance of dimension is ±0.3 mm .

4.1 Application recommendations



C1: 1.0uF (1)

Note
(1) The capacitor value is recommended value. Select appropriate value against module application.

5.Absolute Maximum Ratings

Parameter	Symbol	Min	Typ.	Max	Unit	Notes
Supply Voltage for Display	VCC	-0.3	-	4	V	1,2
Operating Temperature	TOP	-40	-	+80	°C	—
Storage Temperature	TSTG	-40	-	+85	°C	—

Note ：

1. All the above voltages are on the basis of “VSS = 0V”.
2. When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 6 ‘’Electrical Characteristics’’. If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.
3. The absolute limit temperature was verified according to the test conditions of reliability test (See section 9. Reliability) , and module was met all criteria.
4. The defined temperature ranges do not include the polarizer. The maximum withstood temperature of the polarizer should be 80 ℃.

6.Electrical Characteristics

6.1 DC Electrical Characteristics

Items	Symbol	Condition	Min.	Typ.	Max.	Unit
Supply Voltage for Logic	VCC	—	2.8	3.0	3.3	V
High Level Input	VIH	—	0.8xVCC	—	VCC	V
Low Level Input	VIL	—	0	—	0.2xVCC	V
High Level Output	VOH	—	0.9xVCC	—	VCC	V
Low Level Output	VOL	—	0	—	0.1xVCC	V
Display 50% Pixel on	ICC	VCC =3V	—	40	80	mA

6.2 Initial code

```
void initial_SSD1315(void){

        Write_Command(0xAE);    // Display Off

        Write_Command(0xD5);    //SET DISPLAY CLOCK
        Write_Command(0xF0);

        Write_Command(0xA8);    //Select Multiplex Ratio
        Write_Command(0x1F);

        Write_Command(0xD3);    //Setting Display Offset
        Write_Command(0x00);   //00H Reset

        Write_Command(0x40);   //Set Display Start Line

        Write_Command(0x8D);    //Set Charge Pump
         Write_Command(0x10);  //Disable Charge Pump

        Write_Command(0xA1);    //Set Segment Re-Map Default
                                //0xA0 (0x00) => column Address 0 mapped to 127
                               //0xA1 (0x01) => Column Address 127 mapped to 0

        Write_Command(0xC8);    //Set COM Output Scan Direction
                                //0xC0 (0x00) => normal mode (RESET) Scan from COM0
                                to COM[N-1];Where N is the Multiplex ratio.

                                //0xC8 (0xC8) => remapped mode. Scan from COM[N-1] to
                                COM0;;Where N is the Multiplex ratio.

        Write_Command(0xDA);    //Set COM Hardware Configuration
        Write_Command(0x12);   //Alternative COM Pin
                                //(0x02)=> A4=0;Sequential COM pin configuration;
                                A5=0;Disable COM Left/Right remap

        Write_Command(0x81);   //Set Contrast Control
        Write_Command(0x40);

        Write_Command(0xD9);    //Set Pre-Charge period
        Write_Command(0xF2);
```

```
    Write_Command(0xDB);    //Set Deselect Vcomh level
    Write_Command(0x30);

    Write_Command(0xD3);    //OFFSET
    Write_Command(32);

    Write_Command(0xA4);    //Entire Display ON

    Write_Command(0xA6);    //Set Normal Display

    Write_Command(0xAF);    // Display ON

}
```

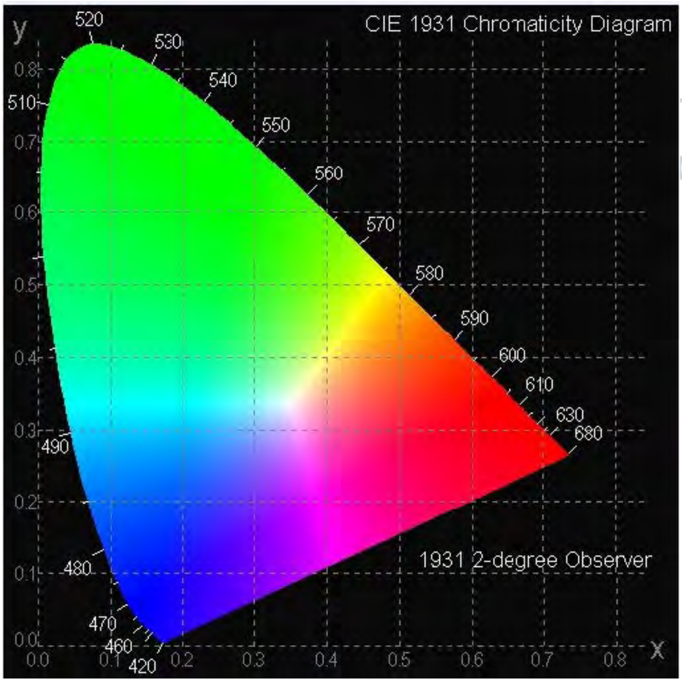
Note 1: Initial code is for reference only. Please make the best adjustment with the OLED module.

Note 2: Command: Set Contrast Control (0x81) , This command sets the Contrast Setting of the display. The chip has 255 contrast steps from 01h to FFh. The segment output current increases as the contrast step value increases. The segment current increases, the OLED brightness increases.

7.Optical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
View Angle	(V)θ	—	160	—	—	deg
	(H)φ	—	160	—	—	deg
Contrast Ratio	CR	Dark	10,000:1	—	—	—
Response Time	T rise	—	—	10	—	μs
	T fall	—	—	10	—	μs
Display with 50% checkerboard Brightness			60	80	—	cd/m^2
CIEx(White)		(CIE1931)	0.26	0.28	0.30	—
CIEy(White)		(CIE1931)	0.30	0.32	0.34	—

Note:50% checkerboard means half of the display area turn on & half area turn off, shown as a checkerboard.



8.OLED Lifetime

ITEM	**Conditions**	**Min**	**Typ**	**Remark**
Operating Life Time	Ta=25°C / Initial 50% checkerboard brightness Typical Value	20,000 Hrs	-	Note

Note:

1. Lifetime is defined the amount of time when the luminance has decayed to <50% of the minimal brightness.
2. This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
3. Screen saving mode will extend OLED lifetime.
4. Lifetime is not guaranteed one but expected lifetime in normal condition.

9.Reliability

Content of Reliability Test

Environmental Test			
Test Item	**Content of Test**	**Test Condition**	**Applicable Standard**
High Temperature storage	Endurance test applying the high storage temperature for a long time.	85°C 240hrs	——
Low Temperature storage	Endurance test applying the low storage temperature for a long time.	-40°C 240hrs	——
High Temperature Operation	Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time.	80°C 240hrs	——
Low Temperature Operation	Endurance test applying the electric stress under low temperature for a long time.	-40°C 240hrs	——
High Temperature/ Humidity Storage	Endurance test applying the high temperature and high humidity storage for a long time.	60°C,90%RH 240hrs	——
High Temperature/ Humidity Operation	Endurance test applying the high temperature and high humidity Operation for a long time.	60°C,90%RH 120hrs	——
Temperature Cycle	Endurance test applying the low and high temperature cycle. 	-40°C /80°C 30 cycles	——
Mechanical Test			
Vibration test	Endurance test applying the vibration during transportation and using.	Frequency:10~55Hz amplitude:1.5mm Time:0.5hrs/axis Test axis:X,Y,Z	——
Others			
Static electricity test	Endurance test applying the electric stress to the finished product housing.	Air Discharge model ±4kv,10 times	——

*** Supply voltage for OLED system =Operating voltage at 25°C

Test and measurement conditions

1. All measurements shall not be started until the specimens attain to temperature stability. After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the functional test at 23±5°C; 55±15% RH.
2. All-pixels on/off exchange is used as operation test pattern.
3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/ Humidity Storage, Temperature Cycle.
4. No Condensation.

Evaluation criteria

1. The function test is OK.
2. No observable defects.
3. Luminance: > 50% of initial value.
4. Current consumption: within ± 50% of initial value.

APPENDIX:

RESIDUE IMAGE

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

10.Inspection specification

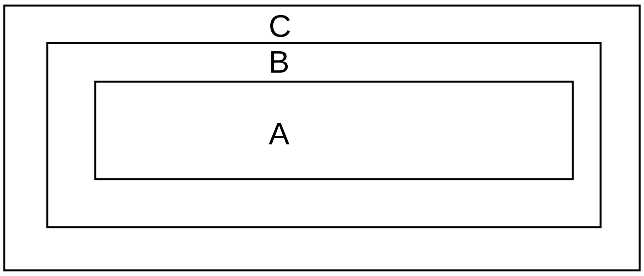
Inspection Standard:

MIL-STD-105E table normal inspection single sample level II.

Definition

1 Major defect : The defect that greatly affect the usability of product.
2 Minor defect : The other defects, such as cosmetic defects, etc.

Definition of inspection zone:



Zone A: Active Area
Zone B: Viewing Area except Zone A
Zone C: Outside Viewing Area

Note: As a general rule, visual defects in Zone C are permissible, when it is no trouble of quality and assembly to customer`s product.

Inspection Methods

1 The general inspection : Under fluorescent light illumination: 750~1500 Lux, about 30cm viewing distance, within 45º viewing angle, under 25±5°C.

2 The luminance and color coordinate inspection : By SR-3 or BM-7 or the equal equipments, in the dark room, under 25±5°C.

NO	Item	Criterion	AQL
01	Electrical Testing	1.1 Missing vertical, horizontal segment, segment contrast defect. 1.2 Missing character , dot or icon. 1.3 Display malfunction. 1.4 No function or no display. 1.5 Current consumption exceeds product specifications. 1.6 OLED viewing angle defect. 1.7 Mixed product types. 1.8 Contrast defect.	0.65
02	Black or white spots on OLED (display only)	2.1 White and black spots on display ≦0.25mm, no more than three white or black spots present. 2.2 Densely spaced: No more than two spots or lines within 3mm.	2.5

11.Precautions in use of OLED Modules

Modules

(1) Avoid applying excessive shocks to module or making any alterations or modifications to it.

(2) Don’t make extra holes on the printed circuit board, change the components or modify its shape of OLED display module.

(3) Don’t disassemble the OLED display module.

(4) Do not apply input signals while the logic power is off.

(5) Don’t operate it above the absolute maximum rating.

(6) Don’t drop, bend or twist OLED display module.

(7) Soldering: only to the I/O terminals.

(8) Hot-Bar FPC soldering condition: 280~350C, less than 5 seconds.

(9) Midas Displays has the right to change the passive components (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.) and change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, Midas Displays have the right to modify the version.)

(10) Midas Displays has the right to upgrade or modify the product function.

(11) For COG & COF structure OLED products, customers should reserve VCC (VPP) adjustment function or software update function when designing OLED supporting circuit. (The progress of OLED light-emitting materials will increase the conversion efficiency and the brightness. The brightness can be adjusted if necessary)..

11.1. Handling Precautions

(1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.

(2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.

(3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged. So, be careful not to apply pressure to these sections.

(4) The polarizer covering the surface of the OLED display module is soft and easily scratched.

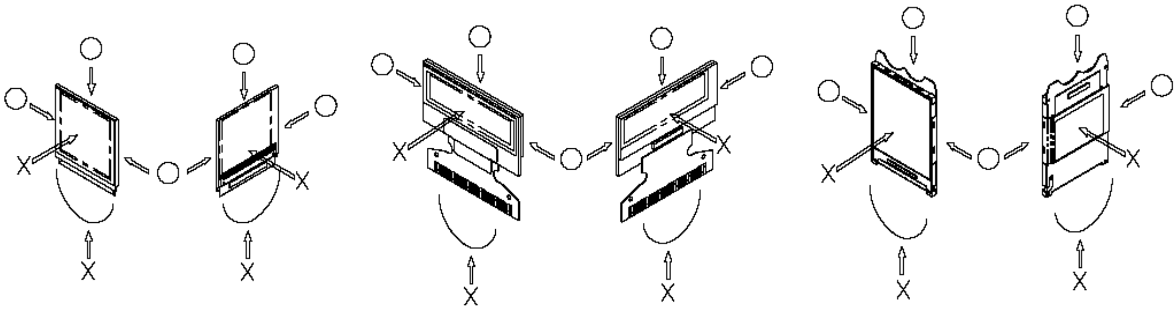
(5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage by using following adhesion tape.
* Scotch Mending Tape No. 810 or an equivalent
Never try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy.
Also, pay attention that the following liquid and solvent may spoil the polarizer:
* Water
* Ketone
* Aromatic Solvents

(6) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.

(7) Do not touch the following sections whenever possible while handling the OLED display modules.

* Pins and electrodes
* Pattern layouts such as the TCP & FPC

(8) Hold OLED display module very carefully when placing OLED display module into the System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.



(9) Do not apply stress to the LSI chips and the surrounding molded sections.

(10) Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity.
* Be sure to make human body grounding when handling OLED display modules.
* Be sure to ground tools to use or assembly such as soldering irons.
* To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
* Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film.

11.2. Storage Precautions

(1) When storing OLED display modules, put them in static electricity preventive bags to avoid be directly exposed to sun or lights of fluorescent lamps. And, also, place in the temperature 25±5°C and Humidity below 65% RH.(We recommend you to store these modules in the packaged state when they were shipped from Midas Displays. At that time, be careful not to let water drops adhere to the packages or bags.)

(2) When the OLED display module is being dewed or when it is placed under high temperature or high humidity environments, the electrodes may be corroded if electric current is applied. Please store it in clean environment.

11.3. Designing Precautions

(1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, OLED display module may be damaged.

(2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specification and to make the signal line cable as short as possible.

(3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD / VCC). (Recommend value: 0.5A)

(4) Pay sufficient attention to avoid occurrence of mutual noise interference with the nearby devices.

(5) As for EMI, take necessary measures on the equipment side basically.

(6) If the power supplied to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot guarantee the quality of this OLED display module.
* Connection (contact) to any other potential than the above may lead to rupture of the IC.

(7) If this OLED driver is exposed to light, malfunctioning may occur and semiconductor elements may change their characteristics.

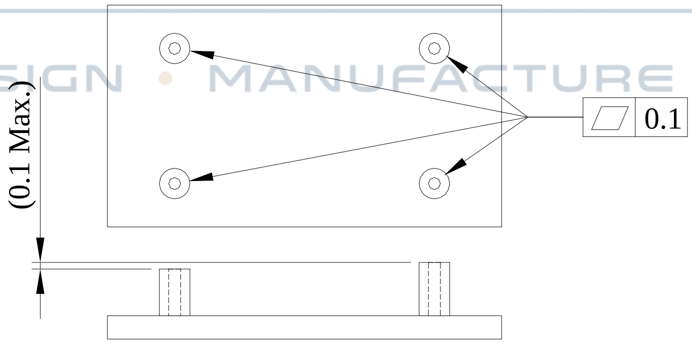
(8) The internal status may be changed, if excessive external noise enters into the module. Therefore, it is necessary to take appropriate measures to suppress noise generation or to protect module from influences of noise on the system design.

(9) We recommend you to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.

(10) It's pretty common to use "Screen Saver" to extend the lifetime and Don't use the same image for long time in real application. When an OLED display module is operated for a long of time with fixed pattern, an afterimage or slight contrast deviation may occur.

(11) The limitation of FPC and Film bending.

(12) The module should be fixed balanced into the housing, or the module may be twisted.



(13) Please heat up a little the tape sticking on the components when removing it; otherwise the components might be damaged.

11.4. Precautions when disposing of the OLED display modules

(1) Request the qualified companies to handle industrial wastes when disposing of the OLED display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.
